

Having trouble with the WeBWorK? First, don't panic - it's a lot to remember!! But do be prepared to put in some time re-learning stuff from Calculus I and II. I've collected a few topics that will be essential in this course, and linked to the corresponding online lessons in our Course Hubs from Calc I and Calc II.

If you'd like to see an example or two of how to solve a problem with these techniques, look for the videos embedded in each online lesson.

Topics about Derivatives

- [Chain Rule](#)
- [Implicit Differentiation](#)

Topics about Integrals

- [U-substitution](#) - this lesson has lots of video examples of the chain rule, including many with logarithmic and exponential functions.
- [Integration by Parts](#)

Comments are welcome (just click the "leave a comment" button above). If you find a particular video especially helpful, let us know (your classmates will thank you!).
