About the MAT 2680 Course Hub

The Course Hub is a central resource created by the Mathematics Department for information and resources related to MAT 2680 Differential Equations. Whether you are a student in the course or a faculty member teaching it, we hope you will find useful material there. Some of the resources you will find include:

- **[Online Lessons](#)**. Here you will find (optional) online lessons for each day of class. If you missed a day of class, or you have questions, this is a great place to go!
- **[WeBWorK Resources for Students and Faculty](#)**. Need help with WeBWorK? Whether you are a student stuck on a problem in the homework, or a faculty member trying to create a quiz, there are resources to help.
- **[Video Resources](#)**. Stuck on a topic? Already looked at the online lesson? You can find additional videos for most topics here, including many examples worked out in full, created or selected by City Tech faculty.
- **[Faculty Training and Support](#)**. Includes more general (non-WeBWorK) topics like: How do I create a discussion board in my course? How do I collect student work using DropBox? Etc.
