Adewale Adegbemigun

ENT 4498

Track: Sound and Video

Professor Ryoya Terao

Project Reflection

Hello, my name is Adewale, I am an entertainment technology student at New York City College

of Technology studying video and Audio, and with knowledge gained I directed a moving story

board for an action film I titled: A New Day, this project also comes with a soundtrack that will

be released on all streaming platforms.

Using playStation, the rockstar editor, aftereffects, logic pro x and Grand theft auto 5 I am able

to record action scenes, and direct player and camera movement. With this technology I created a

5-minute action sequence and created a soundtrack that will be released on all platforms

December 13, 2021. The soundtrack is also titled A New Day available on all streaming

platforms and the and the five-minute moving storyboard is called A New Day

Now you're probably asking yourself "if this game is already made what exactly did I do to

make this scene mine." I wrote the script, directed, recorded my characters actions using the

rockstar editor and when I finished all of that I edited the project using aftereffects and premiere.

The soundtrack was created using Logic Pro x. In the writing room I met with my technical

advisor: Professor Ryoya Terao and brainstormed ideas with him and a few reputable gamers in

the Grand Theft Auto community; and the GTA community suggested that I get a cameo from a

big named artist that also plays the game, and I chose to feature Grammy award winning artist Doja Cat. Finally, after recording my characters movements in the Rockstar editor, I exported the movie files into After effects and began editing the actual video and exported it in HD.

With this experience I am able to sit in the chair of a director and use my video game as a movie scene simulator, with this technology I am able to prepare my vision before actually producing it. With this technology I can accurately calculate controlled CGI scenes without have to spend millions of dollars to test them, I created this project because one day I would like to create an action film of my own.
