ARCH 2431 BUILDING TECH III **Window Systems Studies - ASSIGNMENT 06**

Window Systems

Goal of this assignment is to demonstrate and understanding of how windows are placed in "punched openings" within the solid wall façade studies you are completing this semester. While each student will show the integration of a window into different systems (based on your existing case study selection) – the presentation will be based on wall section drawings, plans and elevations. Remember it is the combination of these three views supported by a 3D isometric that are required to explain the assembly clearly. This work should be presented on a proper title block along with annotation and dimensions at an appropriate scale.

The Research

Research into window manufacturers should be included and cited.

The Presentation

- *Presentation should include your drawings as well as your research.*

Grading:

**Grading is based on completeness and your ability to demonstrate an understanding of the assemblies presented.*
