

**ARCH 3512 Architectural Design V –Adaptive Reuse Design Studio**

1 lecture hour and 8 lab/studio hours, 5 credits

Concept Design

**PART 1:** Create three (3) Collage boards (11x17) showing the following:

1. One for your **impression** of the site
2. One Collage based on the materials on the site
3. One Collage based on the Theme of your retail hostel .

The Collages should have images that inspire, show different outlines, scales, details and materials.

**PART 2:** These collages will be used to take pieces from to create small conceptual models using a variety of materials. Each concept model should have a 3"x3" base and be constructed from a wide variety of materials. Think of the material when creating these models and what it represents in your collages. If there is shade and shadow along a curve in one of your collages, perhaps this can be reflected in your three dimensional physical model in two different materials that interlock in an arc or curve that penetrates the 3"x3" base and rises above into one another.

From you collages, you will create (3) models each on a 3"x3" base for each of these collages. There will be 3 models per collage for a total of **3 collages and 9 models due for the next class.**
