<http://www2.jufejus.org.ar/www.jufejus.org.ar/images/doc/ACTIVIDADES/Estadisticas/Jornadas%20de%20Capacitacion/Material/JornadasX/Tufte/The%20Visual%20Display%20of%20Q%20Info.pdf>

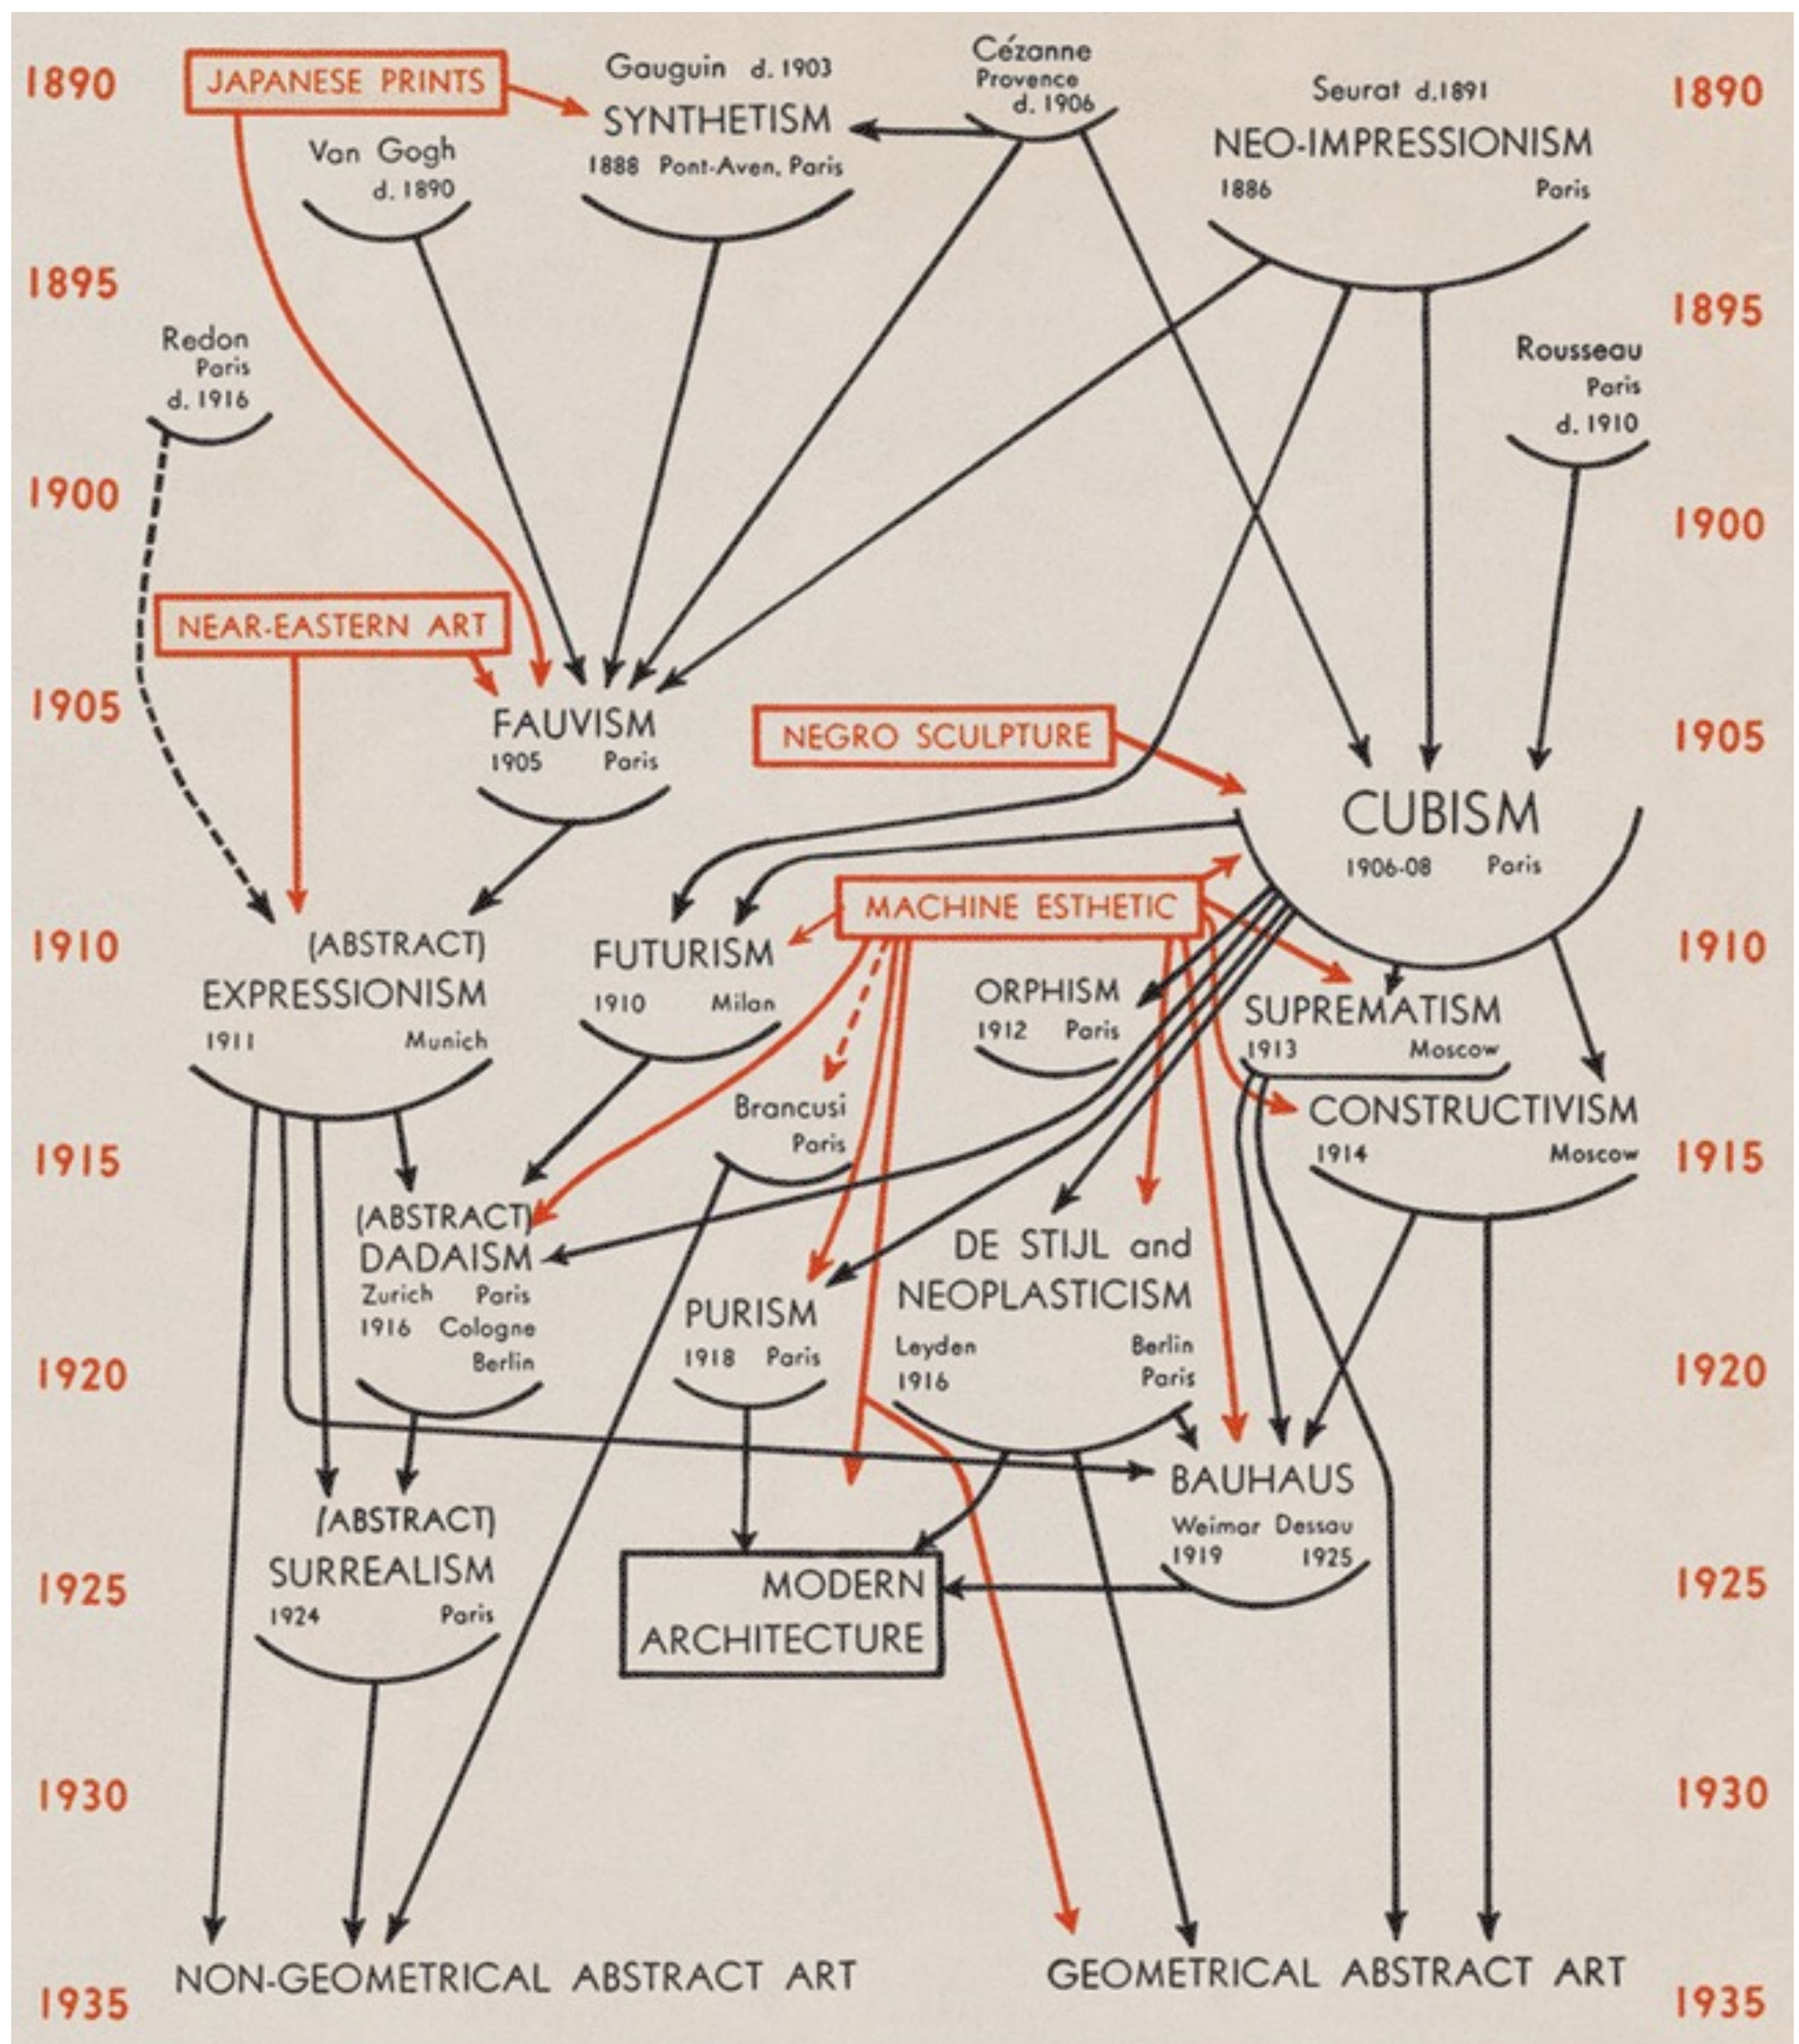

This video is more of a learning how to see approach. Inge is Edward Tufte wife and around minute 30 she reviews concepts with regards to Edwards' work . The beginning is quite good about basic principles of seeing and documenting.

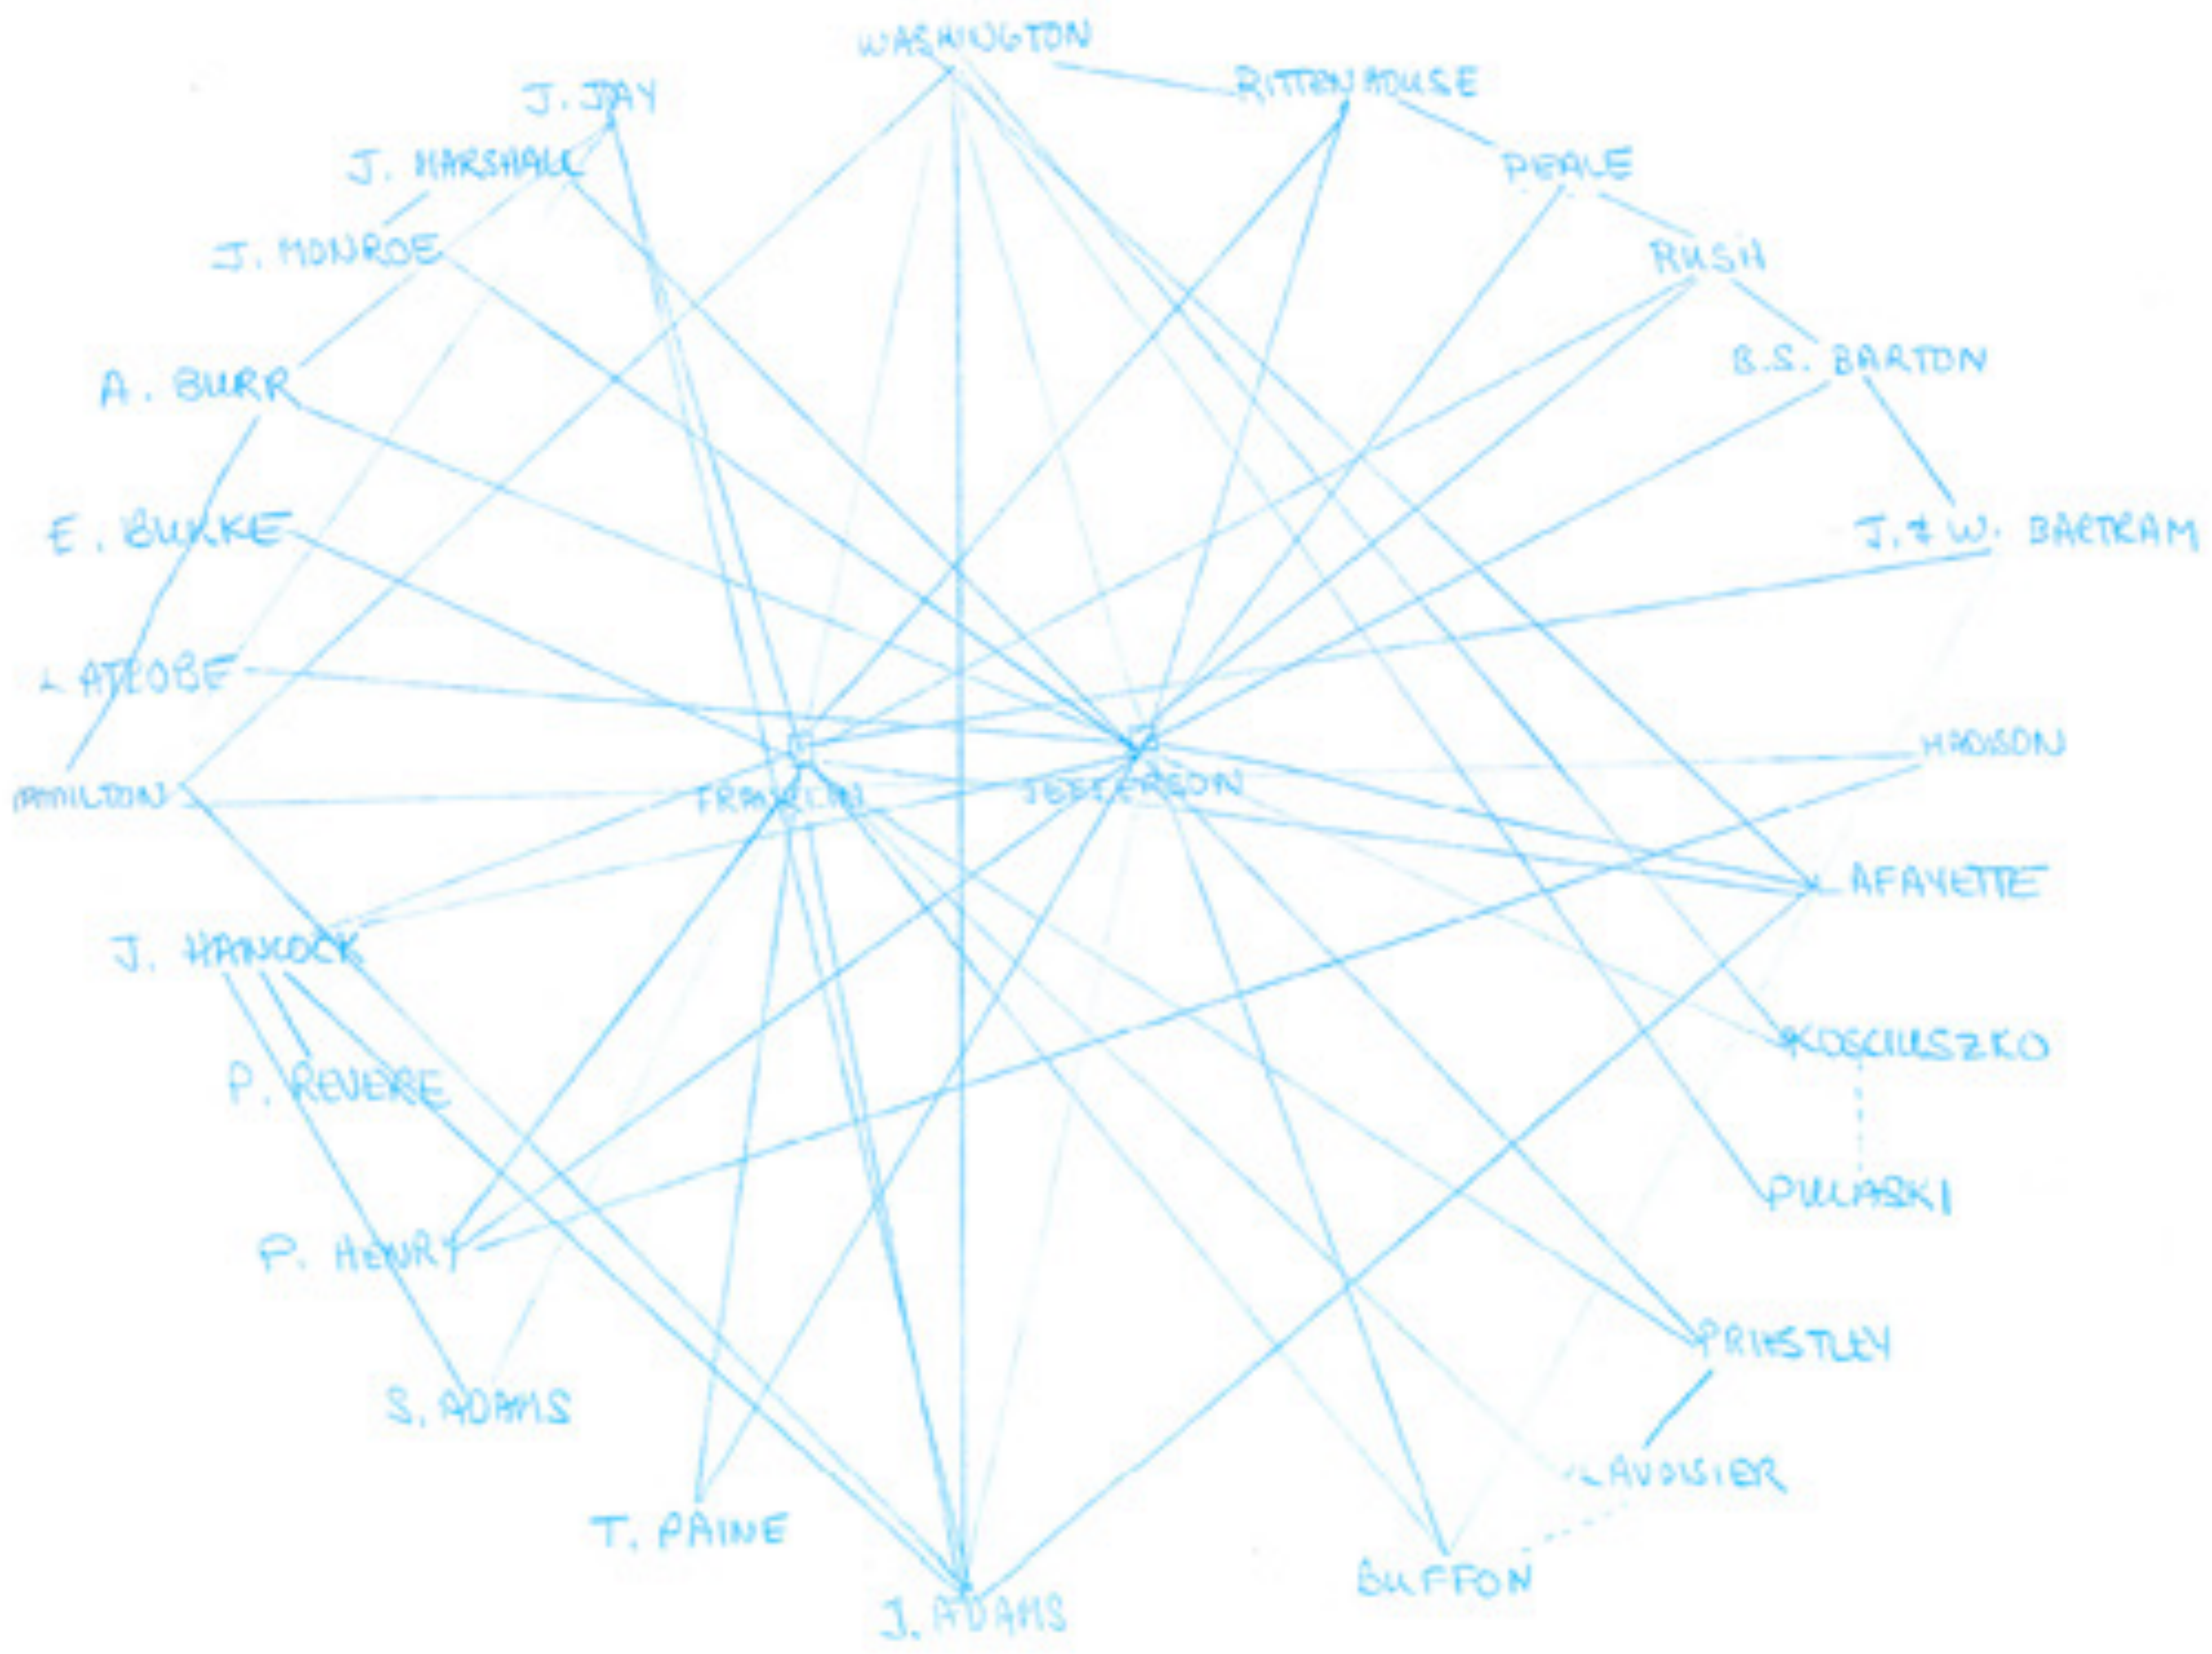

DRAMATIS PERSONAE

provided to the guest as reference and reminder, a useful (if inexhaustive) visual taxonomy of the binding ties (both blood- and near-blood-relational) between characters gathered here today

CUBISM AND ABSTRACT ART

Dissecting the Sluggers' Slumps

By JOE WARD

Jason Giambi and Alfonso Soriano combined for 79 home runs for the Yankees during the regular season. But in Game 5 of the World Series neither was in the starting lineup. Giambi, whose batting average was

well below his career norm this season, has battled a sore left knee. Soriano has succumbed to a steady diet of sliders, stymying his production and making him look overmatched at the plate.

Jason Giambi

Before the Knee Pain, a Classic Stroke

Like most power hitters, Giambi normally has a severe launch angle. When his front foot moves forward and lands, his upper body remains back and is supported by a bent back leg.

Back knee supports much of body weight, while also turning to create torque in the swing.

But Swinging With the Pain . . .

To alleviate stress on his back knee, Giambi (consciously or not) moves his upper body forward, which redistributes more of his weight to the front leg.

Back knee supports less weight when his upper body is shifted forward.

. . . Causes Problems

- DIMINISHED VISION**
It is easiest to see a moving object while the head and eyes are still. By moving the head forward, Giambi's vision is compromised.
- SLOWER BAT SPEED**
Batters create the most bat speed when the swing is rotational (around a stationary spine). When lateral movement is introduced, the components of the swing slow down.
- SHORTER TIME**
Giambi's forward lateral movement causes him to get closer to the pitcher, decreasing the time he has to recognize and react to pitches.

Alfonso Soriano

Soriano says his swing depends on the quickness of his hands. And as a hitter who uses one of the heaviest bats in the game, they need to be. But whether or not his bat feels heavy after a long season, Soriano is swinging as if he believes his swing is slow.

Swinging Early

- 1** To get his bat to the hitting zone on time, he may be starting his swing before completely identifying the pitch's speed and type. The longer a player can wait before starting (or not starting) his swing, the better he will know when and where the ball will cross the plate.

No Time To Recover

- 3** The components of the swing fire in succession from the ground up (the feet, then the legs, then hip rotation, and so on). So, when Soriano commits his legs and hips to what he thinks is a fastball, he has only his arms left to chase the slider.

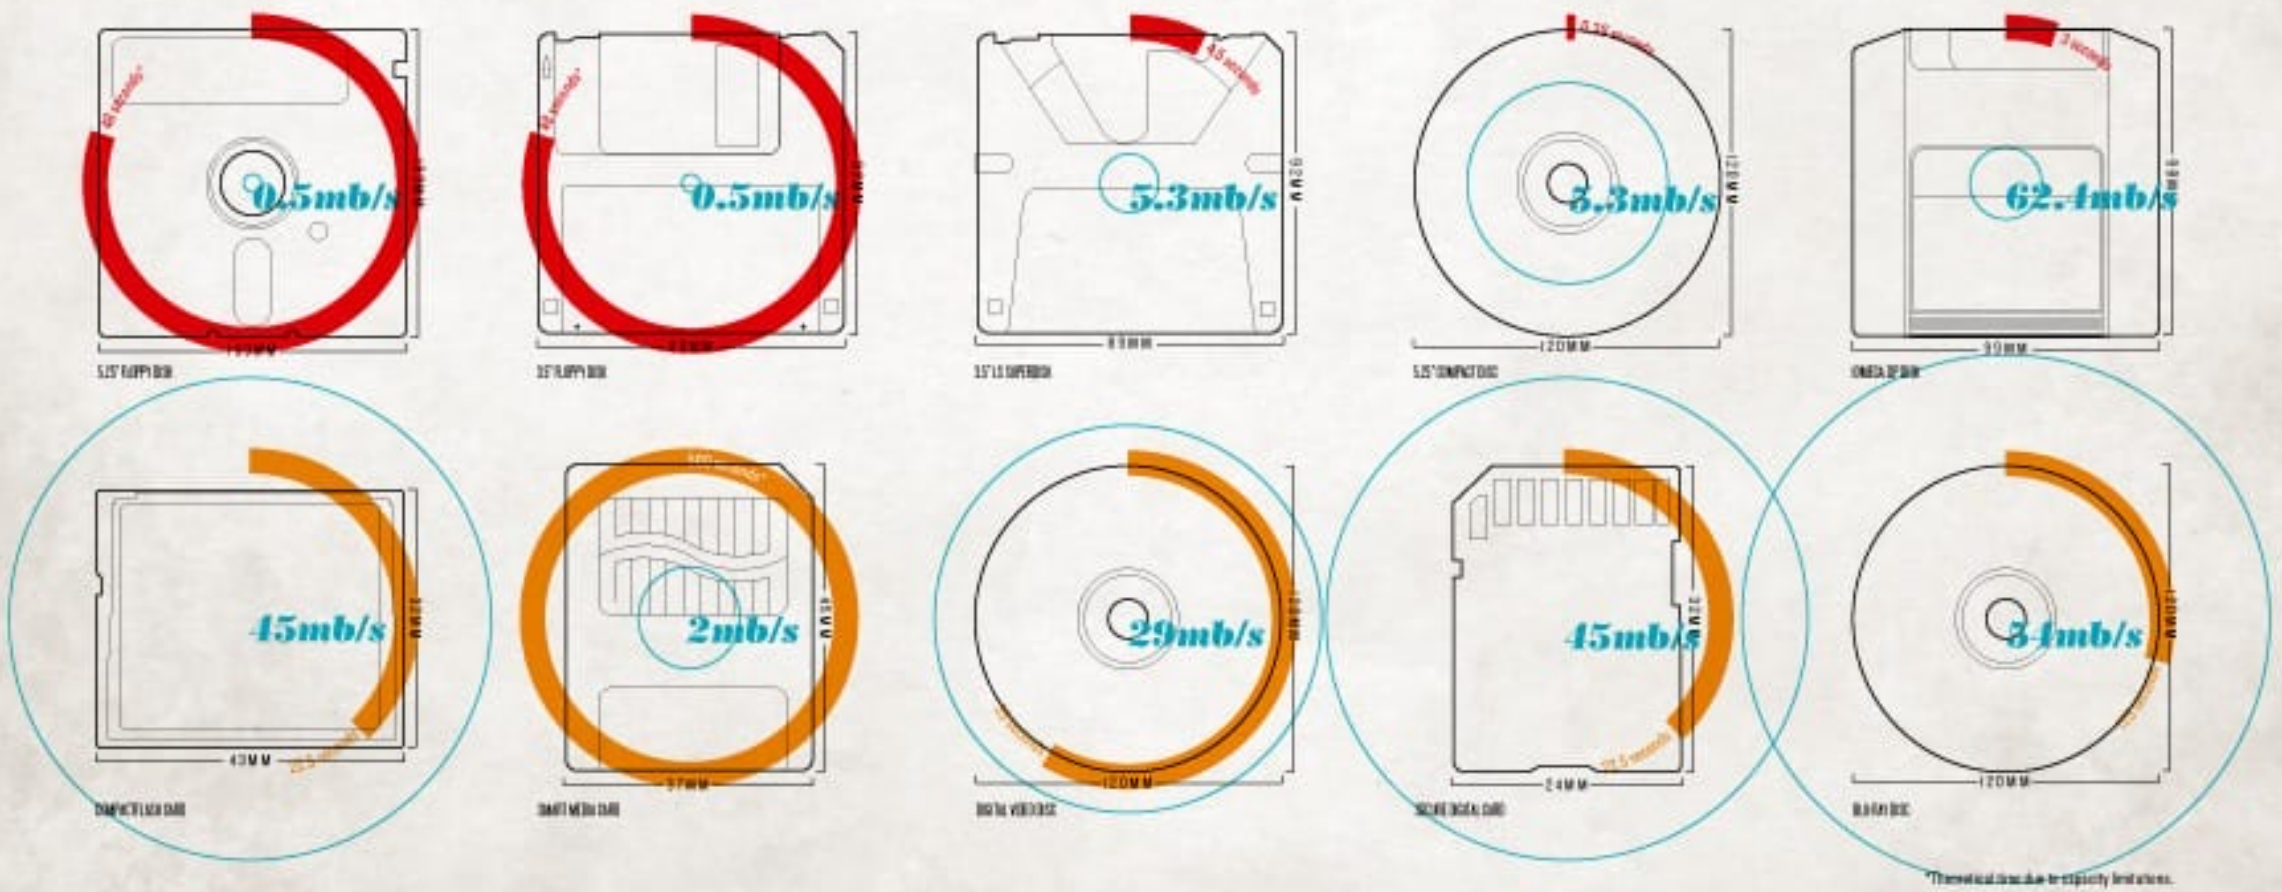

Susceptible to the Slider

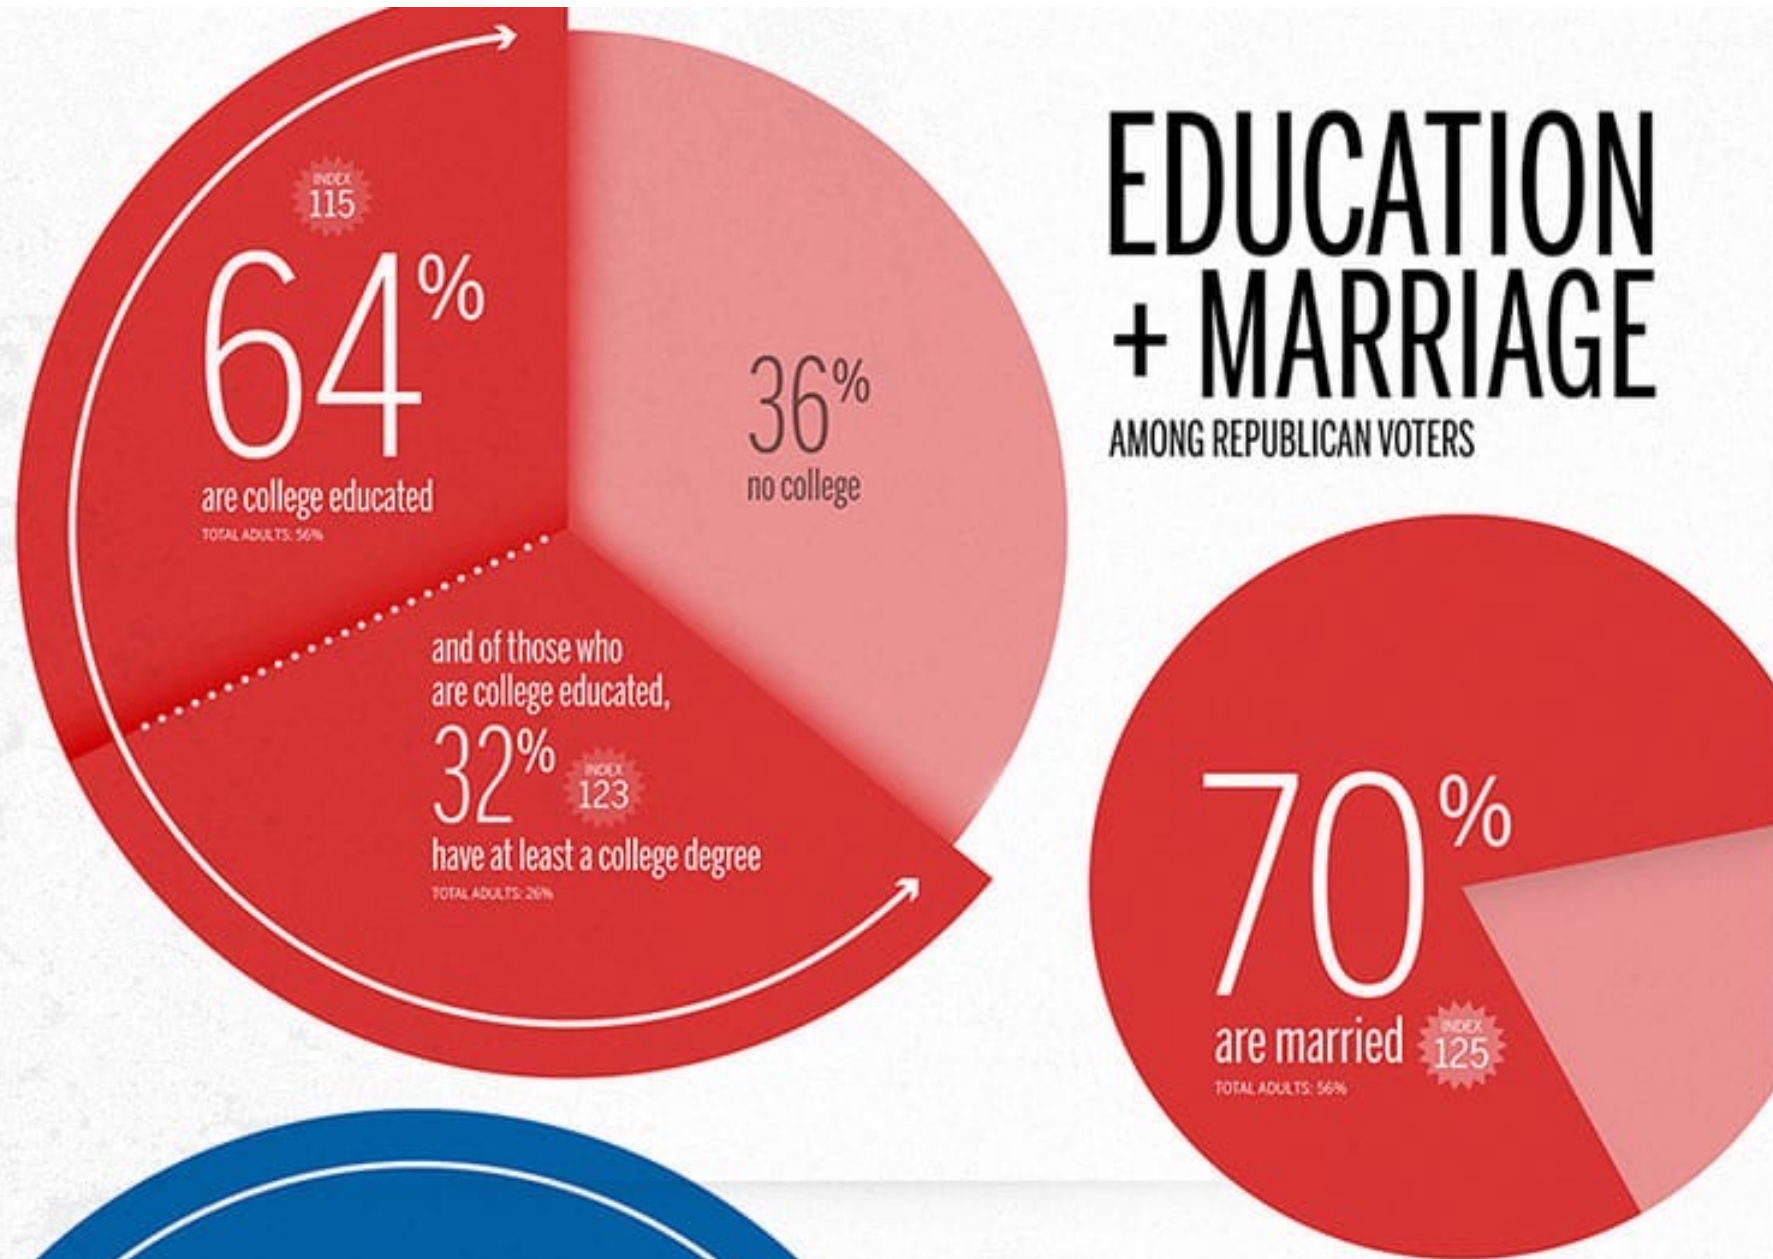

- 2** Shortly after a slider is released, it looks a lot like a fastball. It is not until a batter can read the signature spin of a slider that it becomes evident. Soriano is committing his swing to the path of a fastball. When it turns out to be a slider, it is too late.

Italian Schools of Painting

The Renaissance in Italy

PAINTING IN ITALY.

Italian Painting begins at Florence with Giotto, who in his lifetime exercised the most influence on its development. Siena, the rival city of Florence, a little earlier, produced a remarkable master, Duccio, who was the leading spirit of numerous artists whose characteristics were a certain grace and sweetness, a ray of light coloring devoid of relief, and a feeling for elaborate ornament. But, it was Giotto, inspired by Gothic masters (notably Giovanni Pisano), who loosened the tongue of art. Filling the walls of churches and palaces with pictures of sacred history and legends of the saints, he depicted the whole range of human emotion. His pupils and followers extended throughout Italy; unfortunately their works degenerated into mere mechanical labour, thus, with Masaccio and Masolino, the last representative of the two currents of art starting out from Duccio and from Giotto, closes the first period of painting.

At the beginning of the fifteenth century, an artist appeared who revolutionized art by his vigorous initiative. This was Masaccio, in whom art found a great pictorial interpreter. Three main tendencies may be traced out during this second period termed the age of Realism: action, movement, space, the expression of strong and definite passion are the characteristics of Masaccio and the masters on the central line of this Chart. The artists on the left of the line belong to a school produced by the efforts of sculptors; their aim is accurate delineation of actual things, problems of science and laws of perspective. Fra Angelico is a marked exception coming from a school of miniaturists, he successfully combined the perspective of the times and sought to express the inner life of the adoring soul. The masters on the right of the central line remarkable for their power of illustration, colour and expression, give to the representation of the sentiments and affections the utmost ideal grace and beauty. Michelangelo was a complete personality. Poet, architect, sculptor and painter, he felt himself, and claimed to be, exclusively a sculptor. He enriched art with unexpected new efforts, but his style was perilous to art and led to the Baroque.

The Umbrian School, may be divided into two branches - that which was established at San Severino, Gubbio, Fabriano and the neighbouring towns, and that which flourished in Perugia and the surrounding country. This latter especially took its line from Siena and was distinguished by a tendency to affection over its characteristics, which by their development at Perugia, were destined to contribute to the greatness of Raphael. Piero della Francesca and Signorelli though included in this school belong to the group of Florentine artists placed on the left of the central line of the Chart.

The Paduan School of which Mantegna is the chief exponent is a combination of Florentine elegance (The condition of the school several years at Padua) and of a style founded on that of the Greek-Roman bas-reliefs.

The Venetian School of the second half of the fifteenth century originated from two earlier schools; that of Verona, where a Byzantine style prevailed, and that founded by Jacopo Bellini originally a pupil of the Paduan school and later influenced by the School of Padua. The Venetians perfected oil painting and set forth the glory of the world as it appears to the imagination and to the senses. They loved to render magnificent processions, or social gatherings (sacred and profane) they wished to paint beautiful bodies and gorgeous costumes, to suggest the idea of a free and joyous life.

ARCHITECTS AND SCULPTORS

Niccolò Pisano A. Sc. 1206-1278.
Arnolfo di Cambio A. Sc. 1240-1311.
Giovanni Pisano A. Sc. c. 1240-1320.
Lorenzo Maitani Sc. d. 1300.
Giov. Babbuola Sc. 1300-1347.
Andrea Pisano A. Sc. c. 1275-1349.
Nino Pisano Sc. ? 1300.
Jacopo della Quercia Sc. 1374-1438.
Leonardo Ghisetti Sc. 1378-1445.
F. Brunelleschi A. Sc. 1375-1446.
Agostino di Duccio Sc. 1400-1450.
Desiderio da Settignano Sc. 1428-1464.
Donatello Sc. 1396-1466.
M. Michelozzo A. Sc. 1398-1472.
Leon Battista Alberti A. 1405-1472.
Benedetto da Mantova Sc. 1447-1477.
Antonio Rossellino Sc. 1475-1492.
Luca della Robbia Sc. 1400-1495.
Mino da Fiesole Sc. 1431-1484.
Verrocchio Sc. 1425-1488.
Matteo Civitelli Sc. 1445-1501.
Bramante A. 1444-1514.
Giuliano da San Gallo A. 1445-1516.
Andrea della Robbia Sc. 1435-1525.
Andrea da Sasseto A. Sc. 1460-1529.
Antonio da San Gallo A. 1455-1531.
Ercolo d'Agnolo A. 1402-1543.
Michele Sanmicheli A. 1441-1529.
Raffaello Bandinelli Sc. 1495-1560.
Benvenuto Cellini 1500-1571.
A. Palladio A. 1518-1580.
Bart. Ammannati Sc. 1511-1592.
Gian Bologna Sc. 1524-1608.

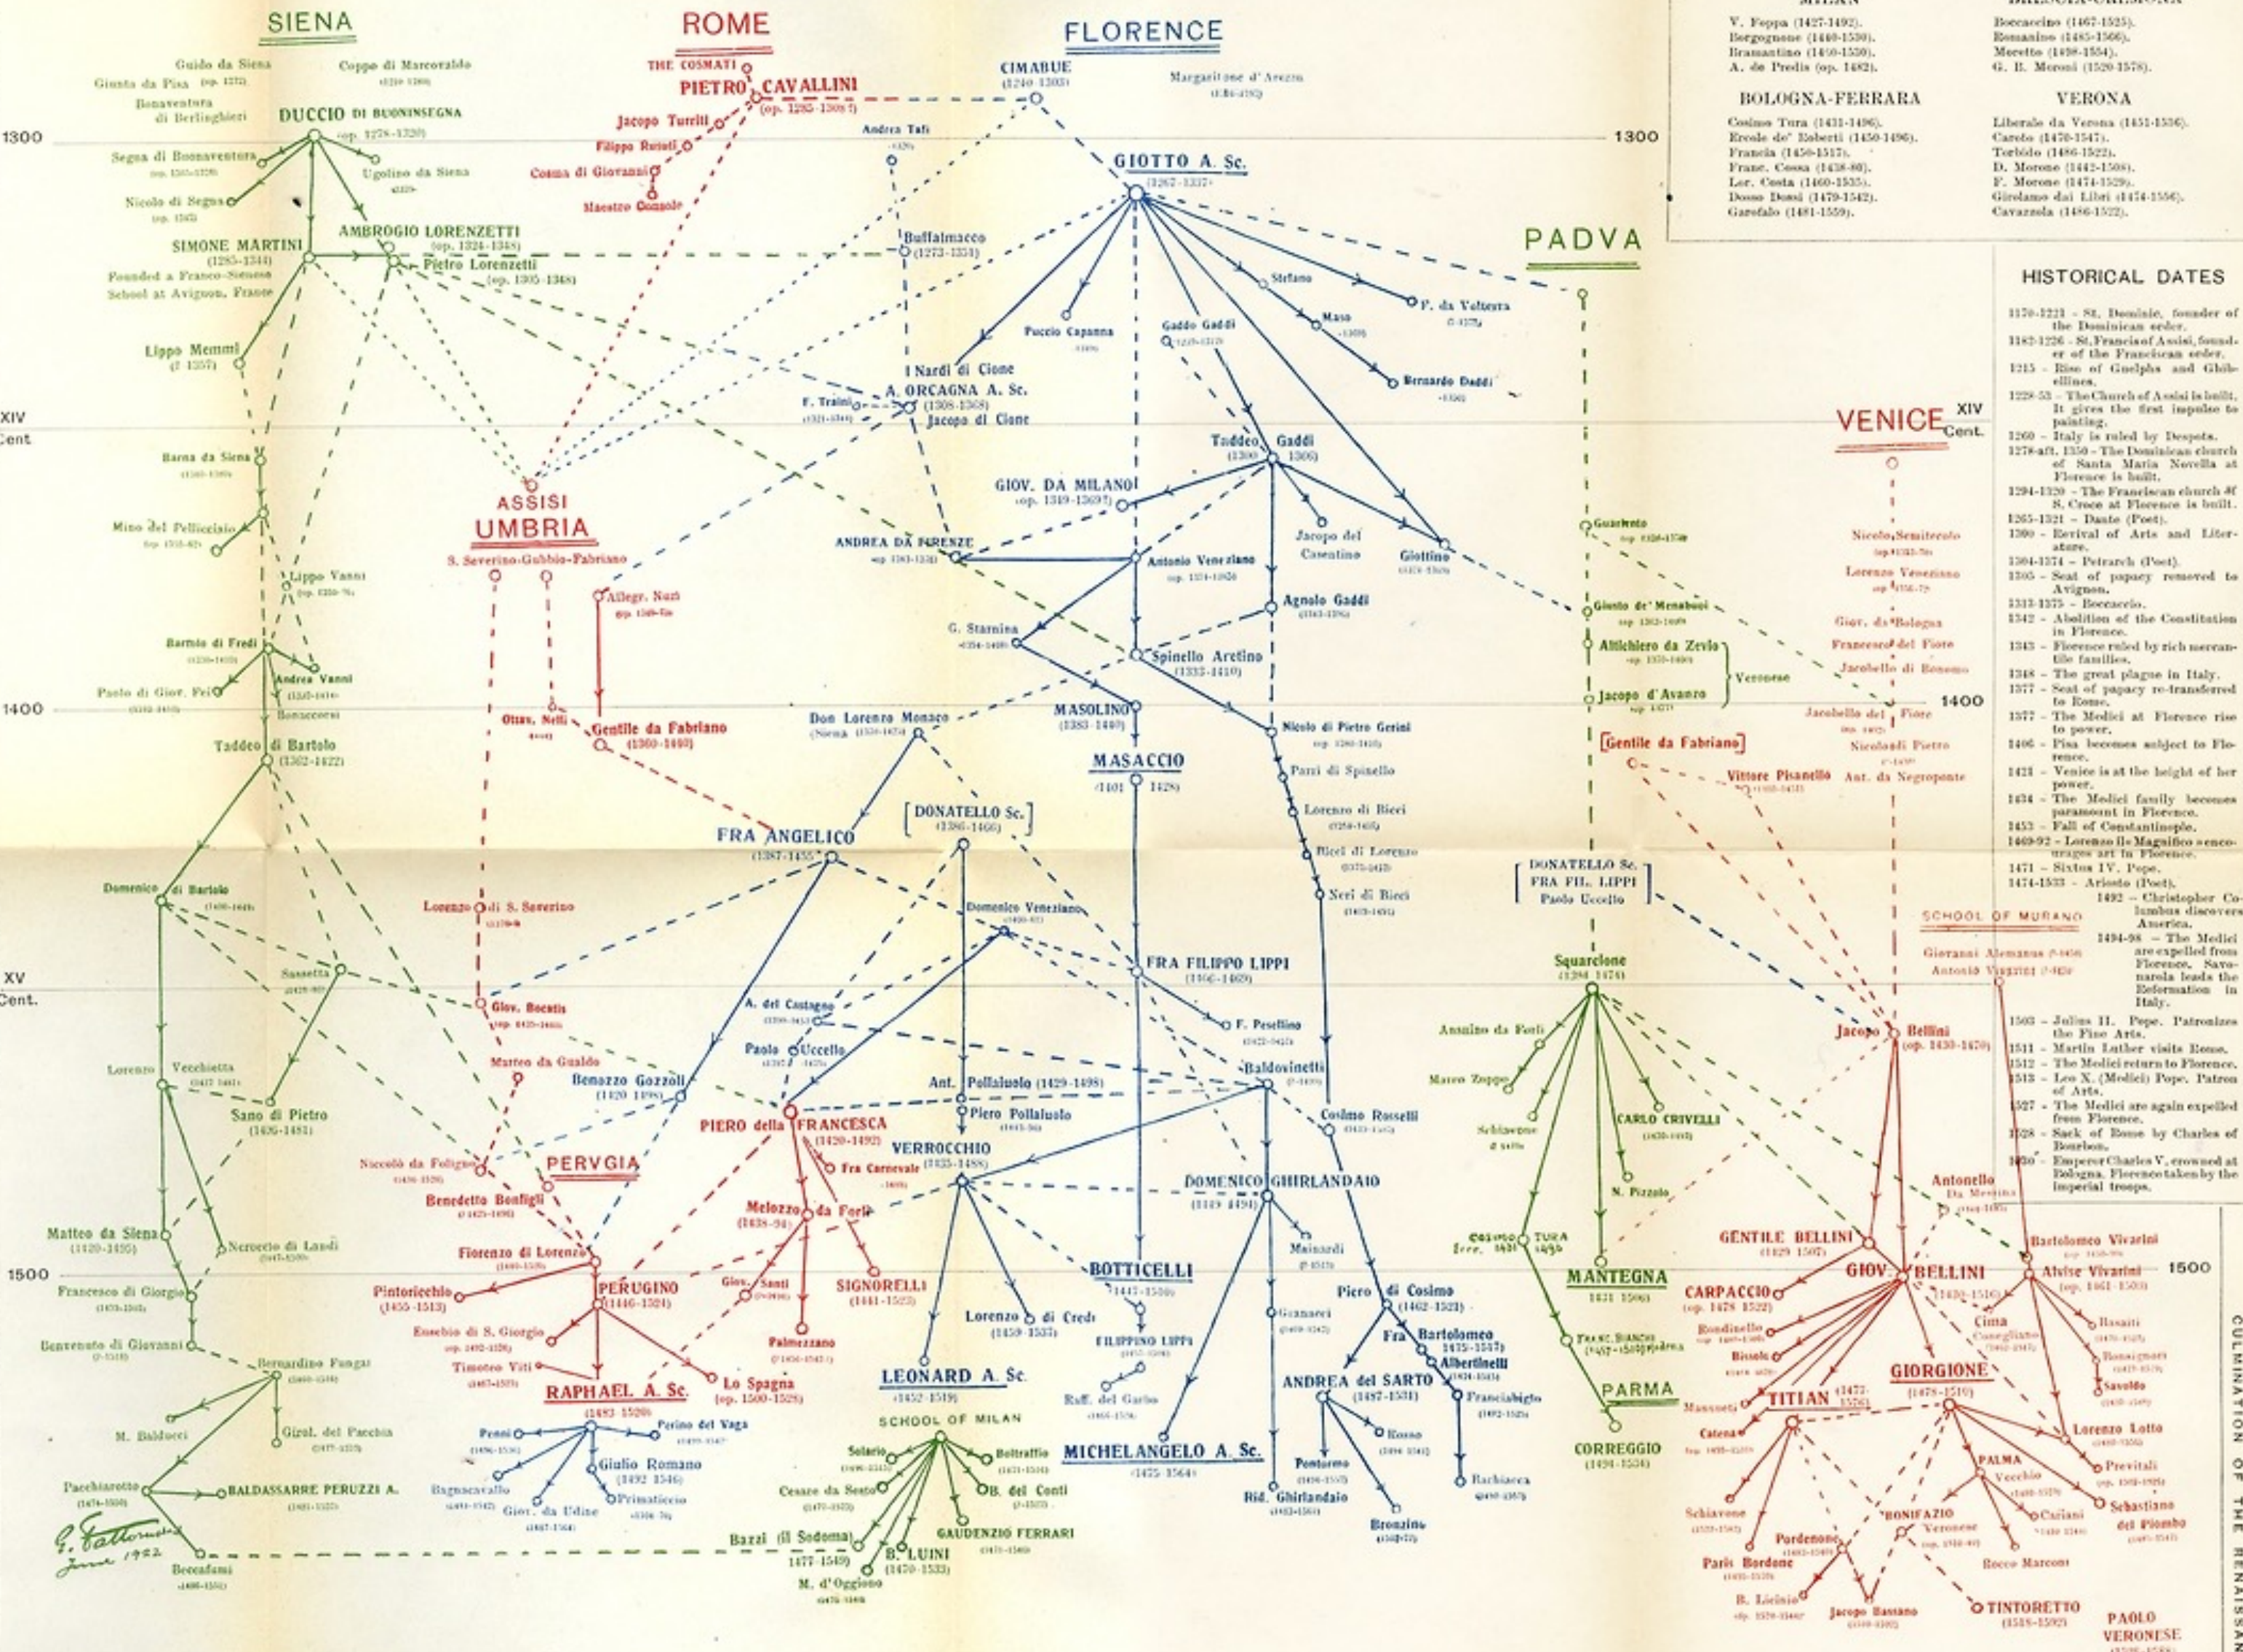

This period marks the decline of the Byzantine style and the rise of the Renaissance style. The religious sentiment dominates the plastic faculty; painters ornament the walls of churches with dramatic images. The aim is to produce the effect of relief by chiaroscuro, and to portray the exact proportion of the human form.

PRE-RENAISSANCE OR "PRERENAISSANCE"
The religious sentiment dominates the plastic faculty; painters ornament the walls of churches with dramatic images. The aim is to produce the effect of relief by chiaroscuro, and to portray the exact proportion of the human form.

EARLY RENAISSANCE OR "QUATTROCENTO"
Artists dedicate themselves to the study of anatomy and perspective. They endeavor to imitate nature faithfully by attempting to produce the effect of relief by chiaroscuro, and to portray the exact proportion of the human form.

QUINQUECENTO
Artists now seek to raise the forms, closely imitated from nature in the previous period, to the highest order of ideal beauty, and to give to the representation of the sentiments and affections the utmost ideal grace and energy.

DECLINE OF ART
A period of stagnation follows, painting falls into mannerism.

The CHART contains the names of the principal artists of the Schools of Siena, Umbria, Florence, Padua and Venice, Leonardo's School of Milan is also included as well as Raphael's pupils in Rome. The names of painters of other schools will be found in a separate table on the right of the chart.

The object of the chart is to assist students in the study of the history of art by providing in a condensed form a synoptical view at once in order to

establish a distinct notion of time, locality and relative position of the artists as the best understanding of their character and importance in the history of painting. Its principle is chronological succession and the year of death rather than that of birth has been adopted, in this way it shows not only the contemporaries of the several masters, but also the approximate period of their operation.

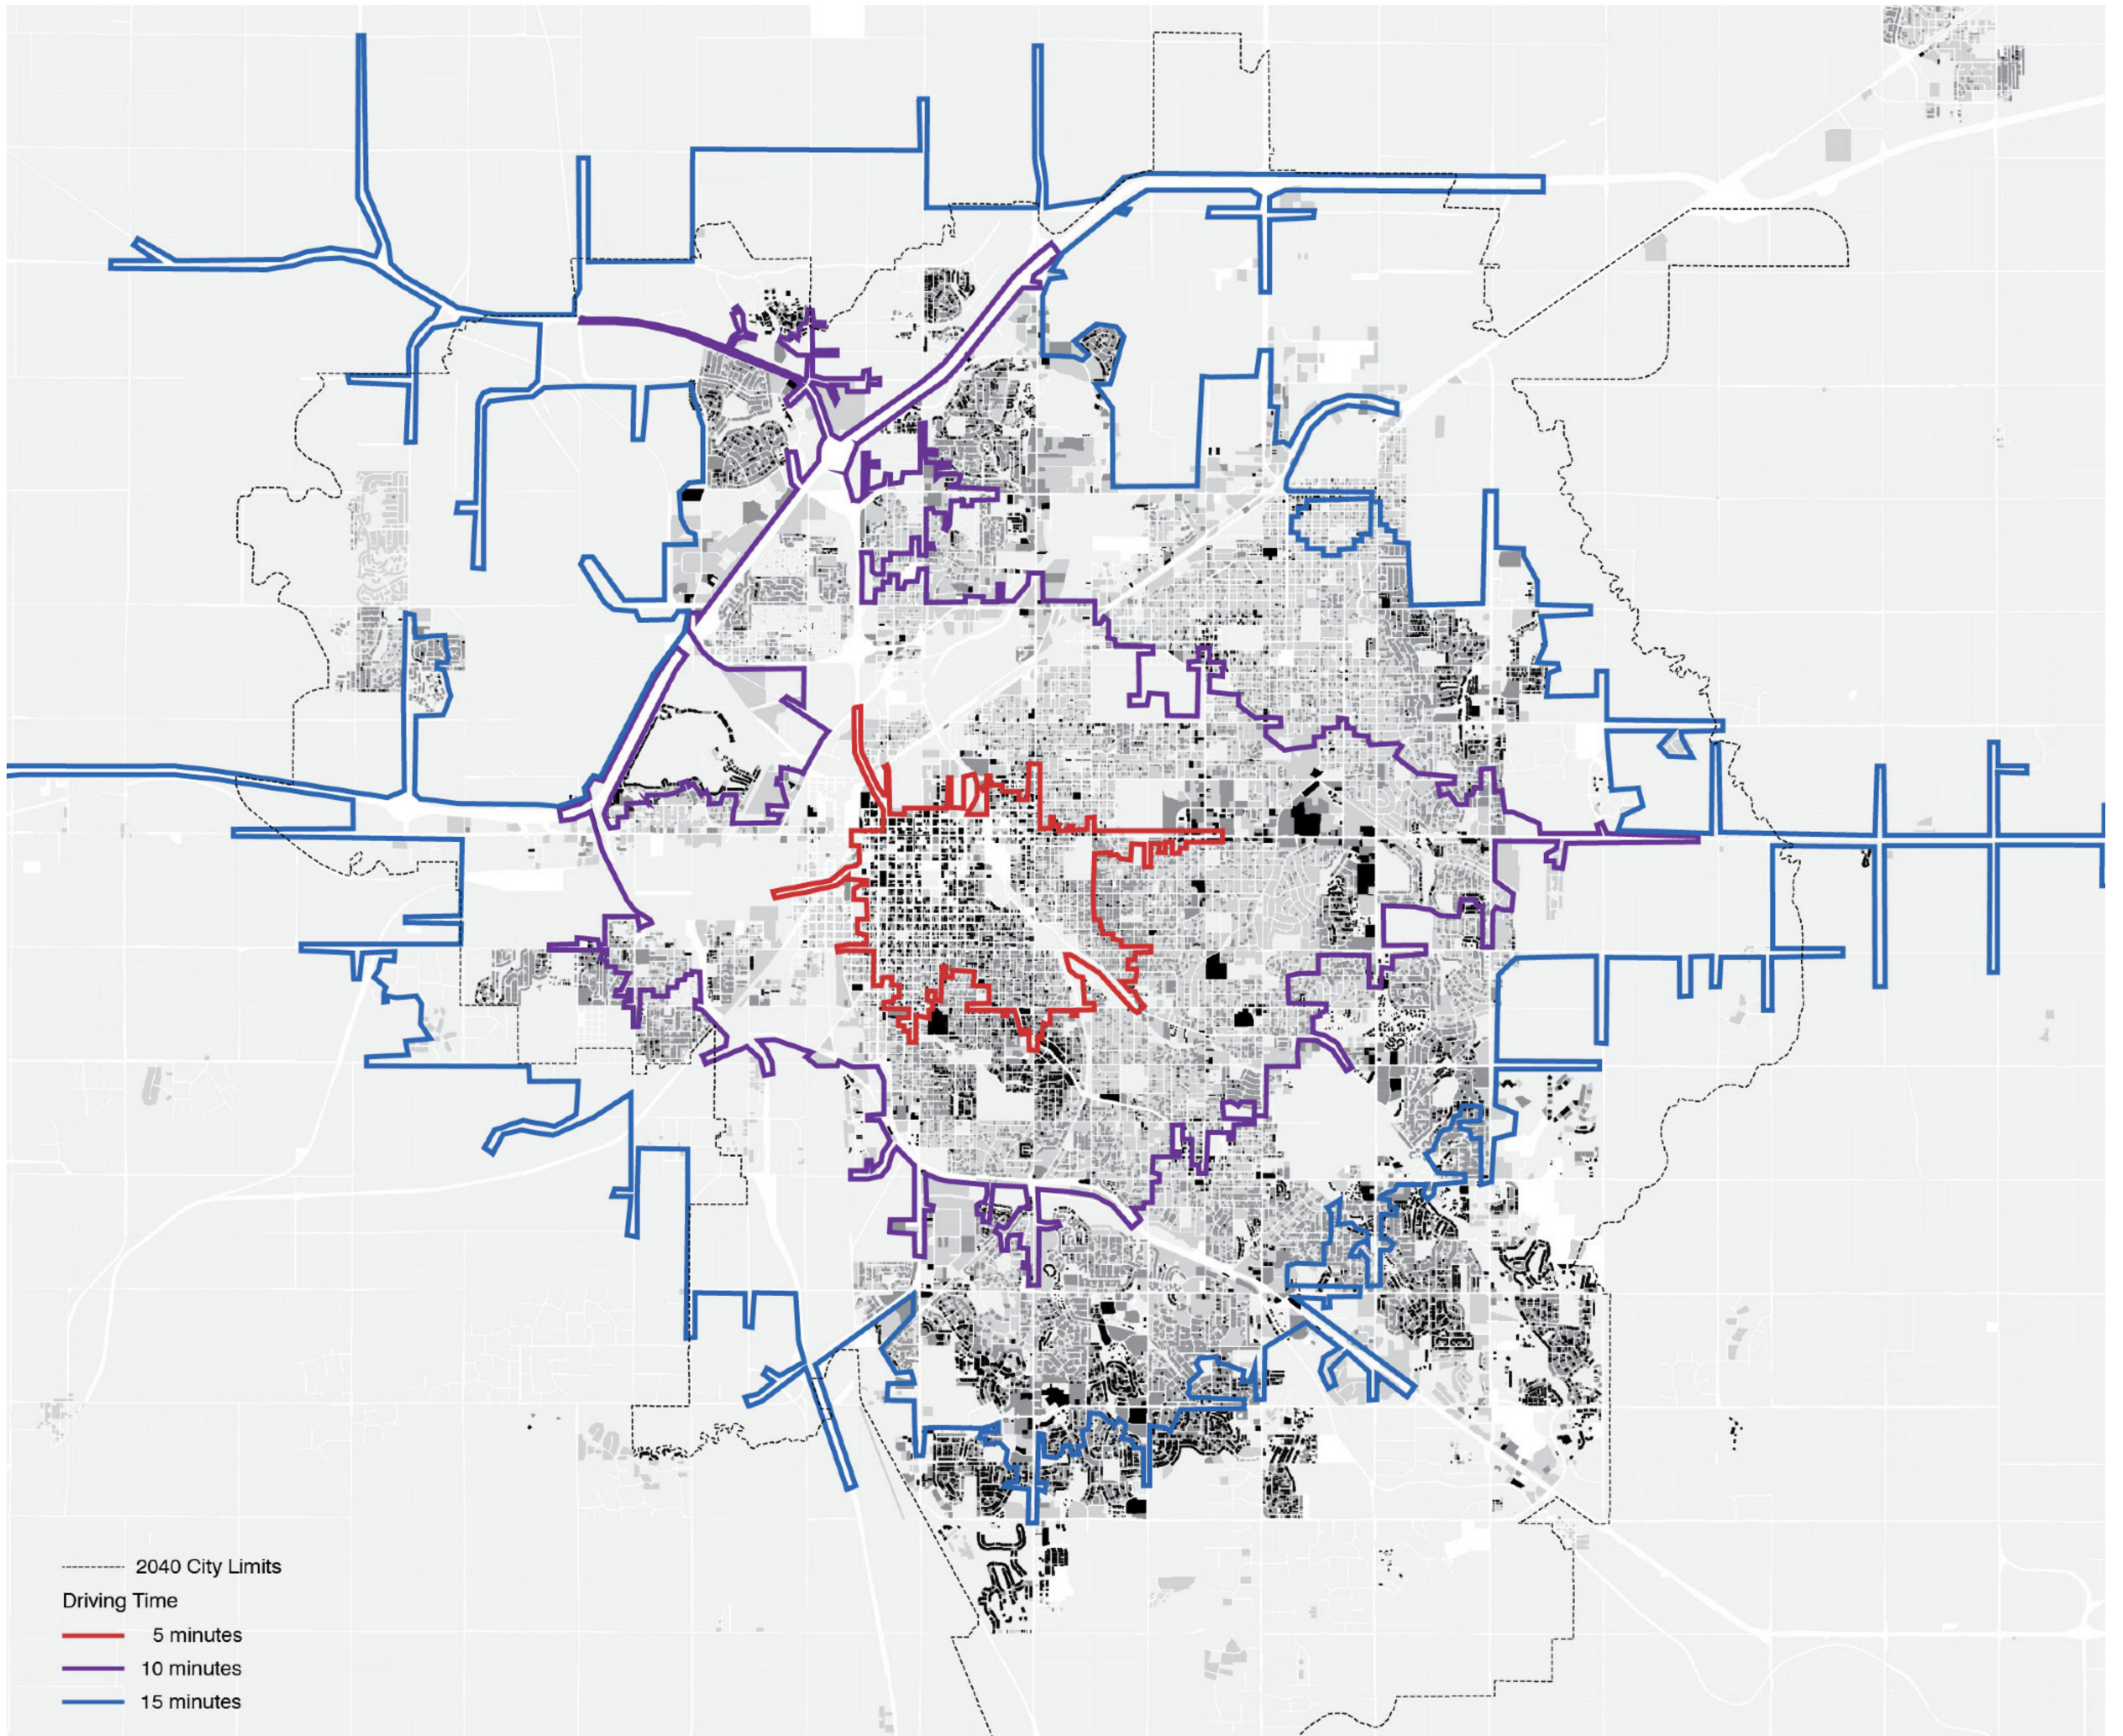

In some cases the dates of birth or death are inevitably conjectural. When the letters A. or Sc. follow a name, this implies that the artist was an architect or sculptor besides being a painter. An arrow indicates a direct relation between master and scholar; a broken line indicates an artistic influence or connection between masters.

HISTORICAL DATES

- 1170-1221 - St. Dominic, founder of the Dominican order.
- 1182-1226 - St. Francis of Assisi, founder of the Franciscan order.
- 1215 - Rise of Guelphs and Ghibellines.
- 1253 - The Church of Assisi is built. It gives the first impulse to painting.
- 1260 - Italy is ruled by Despots.
- 1278-1310 - The Dominican church of Santa Maria Novella at Florence is built.
- 1294-1320 - The Franciscan church of S. Croce at Florence is built.
- 1265-1321 - Dante (Poet).
- 1300 - Revival of Arts and Literature.
- 1304-1374 - Petrarch (Poet).
- 1305 - Seat of papacy removed to Avignon.
- 1312-1315 - Boccaccio.
- 1342 - Abolition of the Constitution in Florence.
- 1343 - Florence ruled by rich mercantile families.
- 1348 - The great plague in Italy.
- 1377 - Seat of papacy re-transferred to Rome.
- 1377 - The Medici at Florence rise to power.
- 1406 - Pisa becomes subject to Florence.
- 1421 - Venice is at the height of her power.
- 1434 - The Medici family becomes paramount in Florence.
- 1453 - Fall of Constantinople.
- 1469-92 - Lorenzo il Magnifico encourages art in Florence.
- 1471 - Sixtus IV. Pope.
- 1474-1533 - Ariosto (Poet).
- 1492 - Christopher Columbus discovers America.
- 1494-98 - The Medici are expelled from Florence. Savonarola leads the Reformation in Italy.
- 1500 - Julius II. Pope. Patronizes the Fine Arts.
- 1511 - Martin Luther visits Rome.
- 1512 - The Medici return to Florence.
- 1513 - Leo X. (Medici) Pope. Patron of Arts.
- 1527 - The Medici are again expelled from Florence.
- 1528 - Sack of Rome by Charles of Bourbon.
- 1620 - Emperor Charles V. crowned at Bologna. Florentines taken by the imperial troops.

Energy use USA 2008 & 2013

Consumption in quads Source LNBL

Estimated U.S. Energy Use in 2013: ~97.4 Quads

Source: LLNL 2014. Data is based on DOE/EIA-0035(2014-03), March, 2014. If this information or a reproduction of it is used, credit must be given to the Lawrence Livermore National Laboratory and the Department of Energy, under whose auspices the work was performed. Distributed electricity represents only retail electricity sales and does not include self-generation. EIA reports consumption of renewable resources (i.e., hydro, wind, geothermal and solar) for electricity in BTU-equivalent values by assuming a typical fossil fuel plant "heat rate." The efficiency of electricity production is calculated as the total retail electricity delivered divided by the primary energy input into electricity generation. End use efficiency is estimated as 65% for the residential and commercial sectors 80% for the industrial sector, and 21% for the transportation sector. Totals may not equal sum of components due to independent rounding. LLNL-MI-410527

Zoning & Building Function

An analysis conducted to study upon the various function of the building on site and at the same time determining the potential user and market through this analysis.

Comparison Chart of shops found on site

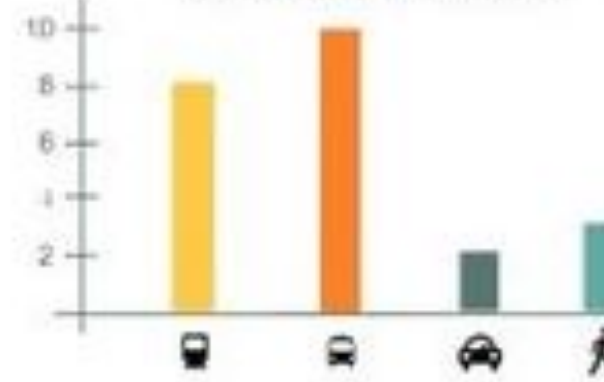

Accessibility

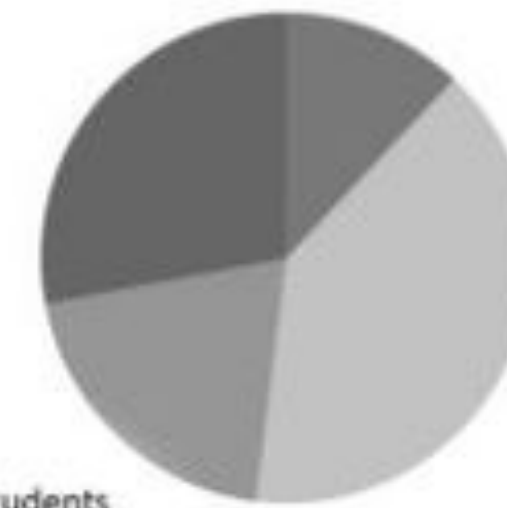

vehicular access is very limited toward the side due to the traffic flow of the area. Most of the main road that leads to the entrance of the site are One-way streets which requires users to make a detour from the next exit.

Means of Transport to site/20 pax

Pedestrian access to the site is very convenient as the site is located adjacent to a railway station. Due to traffic condition and lack of parking spaces, walking is a favourable means of transport on site.

- Students
- Working ppl.
- Old folks
- Homeless

User

The main users that are observed on sight are those who are considered middle aged group where they have leisure time to hangout and socialize with their friends.
