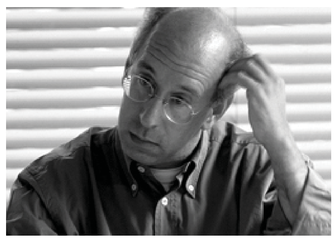
Assignment F:
JOSE PAULO DOS SANTOS



Type: Residential
House: Casas Monte Das Alosas, Covela
Location: Sao Tome de Covelas - Baiao
Property size:53819 to 69965 Sq.ft
Total Floor Area: 4068.76 Sq.ft
Each floor is about: 30'x25' (not accounting for patio)

Early on in his career Dos Santos experienced the revival of old structures, convents in a historic town(Arraiolos), and from that experience he learned what made new attachments successful on old structures. the balance between the counterparts and their usage and program had to be just right for the resulting fused structure to exhibit characteristics of a successful, -liveable, space. that the new attachment could act as a parasite but rather a symbiotic addition to an old program.

Attention had to be invested into the construction details so that the integration of the old walls and corridors of the new attachment are seamless. this ability to sew details in a careful and rewarding manner can be also be seen in this case study project; he carefully fits a dark wooden book shelf into the kitchen partition wall. giving it a sense of monolithic form yet maintain its own identity of singularity.
