

In class we attended a field trip to the Nassau County Museum Blue. We also visited the Digital Museum at the Cooper Hewitt. It was a very interesting walk through. We had seen so many masterpieces. Most of this museum was originated by William Cullen Bryant. The Frick Family bought the place and took over. Frick created the Pinetum. It is an experimental planting of hundreds of conifer specimens from all over the world to study how these species would adapt to this particular latitude. He was an inventor and he helped curate the museum in so many ways.

This is one of my favorites. I love the vibe to it. Its a very cool vibe because blue is a cool color. Its a very cool section and it represents a very important color. That color is blue. The world needs blue. We need lots more too. There are so many different types of blue. Blue is a special color and its one of my favorites.

This image is another favorite of mine because you can really feel the emotion in it. This portrays very strong emotion and the colors; like the blue are very vintage. It shows how blue can be used in a different way.

This art is so beautiful. I am not sure what it is but it reminds me of a sausage and I love it. Whatever it is, it shows how different shades of blue really accentuate it and bring it out. Blue is a very cool color so it reminds me of a icy glacier background.
