

Dear Professor Belli and future readers,

While doing this project, I realized how vast the subject of science in general is. Doing research on the multiverse caused me to then have to do research on quantum physics and quantum mechanics, something I have never had a care for. However, having a focus on one subject opens your mind to think more broadly about other topics out there.

During my lightning presentation I realized how vague my topic may be to some. That while I may be interested other people may not, or just may not care at all. My references could have also been better for my project, as well as implementing them into the presentation itself, however that could be circumstantial as it was a lightning presentation. The connection to science fiction was something that, while I feel I did, I also believed I could have done better, or more effectively, which I hoped I had done.

Going over the comments helped me better organize the project, such as using media examples in the images to try and help people understand better. Visual representative is an easy way to help a person understand something, especially when said visual is already familiar to them. In regards to actually presenting, that is not something I usually have trouble with, as I have always been comfortable with it. However, with a research project I understand that I should have an understanding of the information at hand in order to answer any questions that may come. In my opinion I humbly feel that my project couldve been better. As I did not actually have a meeting to discuss my project, I am sort of going into this halfway blind, but since this is not the first time I have done a presentation it was simply more so a challenge for me. One that I hoped I did well at. It has been great being a part of this class with you all, I hope you enjoyed my project and I wish you all the best.

Best regards,

Khoury Douglas
