The Atari 800 Home Computer

The Atari 800 frontiers the world of personal computers like never before by bringing you a new look on design, a state of the art processor, the best video games, and much more for only $999.95! However, video games aren't the only thing available, the Atari 800 contains an extensive amount of business related software created by the finest professionals. The Atari 800 is surely the optimal choice for anyone looking to get a new computer!

Specs

Operating System

Atari 8-bit OS

CPU

MOS Technology 6502B running at 1.79 MHz

Graphics

Capable of producing up to 128 colors using our CTIA (Colleen Television Interface Adapter) chip

Sound

With 4× oscillators with noise mixing, the Atari 800 brings you the best sound on the market!

Design

Designed by Kevin McKinsey, the 800 gives off the warm and friendly look of a typewriter. However, the ragged edges showcase the ferocity of this powerful machine.

Equipped with four controller jacks, the Atari 800 is the life of the party with games like Space Raiders, Caverns of Mars, and much more!

Software

The Atari 800 contains some of the best games available in the market that will bring hours of fun and excitement! One exceptional title that embodies this is Star Raiders, a game that will surely make you the talk of the town.

Star Raiders is a space combat simulator that uses advanced three dimensional graphics to show the true power of the Atari 800. But it doesn't just look great, it has addictive gameplay, a unique scoring system, and four difficulty levels that will make you play for weeks on end! Only available on the Atari 800 Home Computer!
Why Choose Atari?

The Atari 800's expandable memory, advanced peripherals, and comprehensive software easily makes it one of the most advanced home computers in the world today! Also, its sleek typewriter like design make it easily accessible to anyone with previous computer knowledge.

Not only is the Atari 800 easy to use compared to other home computers, it also blows the competition away with its MOS 6502 1.8 Mhz processor. Packed with a punch, the MOS 6502 1.8 Mhz processor creates an experience like none other as its intense speed makes the Atari 800 one of the fastest computers around.
