FACULTY HANDBOOK FOR THE PREPARATION OF NEW ACADEMIC PROGRAMS
REVISED AUGUST 2015

I. BASIC GUIDELINES FOR NEW PROGRAM APPROVALS

A. Introduction

The academic programs offered by the City University of New York represent a broad and diverse spectrum of educational opportunities provided to tens of thousands of students at every degree level. Currently, the University offers over 2,000 degree-granting programs. As of this writing, over 65 programs are offered at the doctoral level and over 650 at the master's level. There are over 700 baccalaureate programs and over 250 associate degree programs. In addition, there are more than 340 certificate programs from the pre-associate to the post-graduate levels. The University's vast curricular offerings are a tribute to the immeasurable talents of its faculty.

The University takes justifiable pride in its established academic programs, but it cannot afford complacency. The ongoing development of new academic programs is vital to the University, its students and the communities it serves. Academic programs shape the intellectual efforts of both faculty and students, and they reflect each college's mission and goals.

As mandated by the Board Bylaws, the development of new academic programs is the prerogative of the faculty on each campus. Faculty expertise provides the best guarantee that the education process will be dynamic and that the colleges will grow and change to meet society's challenges and students' needs.

While the faculty has the responsibility for initiating new academic programs and revisions to existing programs, the college administration, led by the President and the Chief Academic Officer, also plays a key role in academic program development. The college administration is responsible for creating an environment that provides for ongoing review, constructive change, and appropriate additions to the college curriculum. It is through this collaboration that the college's unique mission and goals are fulfilled.

The University's process of program approval is designed to maintain the highest standards of excellence. The following guidelines are meant to serve as a concise reference for new program planning, development, and approval. They are intended to promote the efficient processing of proposals from the colleges to the University's central administration and Board of Trustees, through final approval by the New York State Board of Regents.

Before any new program can be offered at the University it must undergo qualitative reviews and receive approval from appropriate governing bodies at three levels:

- the College;
- the Board of Trustees (BOT);
- the New York State Education Department (SED).

In Fall 2013, the University took steps to abbreviate the program review and approval process. We no longer require a Letter of Intent as a first step in the program approval process; the proposal is now the only document required. As part of the development of new masters programs, the University no longer requires a proposal review by the now disbanded Graduate Advisory Committee. As a result, the timeline for program approval has been shortened, however from approval by the appropriate college governance bodies and the Office of the Provost through approval by the CUNY Board of Trustees takes approximately a year with approximately an additional six months for approval and registration by SED. The Office of Academic Affairs (OAA) is committed to facilitating the review process and moving each proposed program toward its final goal as quickly as possible. To that end, this document sets forth information on general evaluation criteria; and the final proposal (content and procedure).

B. General Evaluation Criteria

The criteria used to evaluate a program proposal will vary depending upon the program itself and are also determined by the role of each governing body reviewing the proposal. Nevertheless, certain criteria should apply to the review of all academic programs.

By the time a program is recommended for approval by OAA to the Board Committee on Academic Policy, Program, and Research (CAPPR), it will have been evaluated according to the following standards:

- Academic quality;
 - Justification of needs (to include societal needs in terms of regional, state and national needs; career opportunities for graduates; and student interest);
 - Relationship to other programs at CUNY (e.g. possible duplication);
 - Relationship to other campus programs and to college and University missions;
 - Resources available to implement the program;
 - Conformity with the standards of accrediting agencies (necessary for the professions);
 - Conformity with the regulations of the SED.
1. The University Director of Program Review, Articulation and Transfer and other appropriate OAA staff will read the initial draft proposal and consult with the EVCP concerning the proposed program.
 2. The EVCP will send a formal response to the President either authorizing the College to proceed with the full development of the program proposal or requesting further information and discussion.
 3. In order to facilitate the development of the proposal, the Provost and appropriate faculty may be invited to meet with members of the OAA staff. Final proposals must be received within two years from the date of the letter authorizing the college to proceed with the development of the full proposal.

C. The Proposal

Colleges should start the program development process with the proposal writing. Experience suggests that almost all proposals require some discussion with OAA before submission and some revision before they are ready for presentation to the Board of Trustees. **The final proposal should not exceed 25 pages, excluding appendices.** A checklist reviewing the proposal components can be found in Section IV of this Handbook.

The audience for the proposal includes: the Executive Vice Chancellor for Academic Affairs and University Provost; the Associate University Provost; the University Director of Program Review, Articulation and Transfer; staff members of the Office of Academic Affairs; staff members of the University Budget Office; the members of the Board Committee on Academic Policy, Program and Research; and ultimately, staff at the New York State Education Department. Thus, the document should provide a comprehensive justification for implementing a new academic program at the University and must delineate a plan that is carefully focused and well-defined in terms of the College's and the University's needs and goals.

Contents of the Final Proposal

The proposal's **title page** must include:

- the college name;
- the name of the department(s) sponsoring the program;
- the official name of the program;
- the degree or certificate to be awarded;
- the anticipated date for implementation of the program;
- the date of College governance approval (please include as well the name of the appropriate governance body);
- the signature of the Chief Academic Officer, which certifies the date of College governance approval;
- the name, title, telephone and fax numbers, and e-mail address for the proposal's chief contact person.

Please consult Section VI of this Handbook for an OAA template of a sample title page.

The proposal's second page should comprise the **table of contents**, indicating the narrative portion of the proposal as well as the appendices. All pages must be sequentially numbered throughout. The program proposal is going to be reviewed by many parties. It should be presented in a way that facilitates finding key elements. Please consult Section VI of this Handbook for an OAA template of a sample table of contents, including a model for presenting documentation in appendices.

An **executive summary** should follow the table of contents. This is not a summary of the program, but a summary of the entire proposal. The executive summary should be one-two pages long, and give a short narrative on the major topics covered in the proposal - the demand for the program; the curriculum; available and needed faculty resources; enrollment projections; cost and revenue projections as well as student outcomes.

An **abstract** of the proposal (approximately 250 words) must also be included, and will inform the resolution presented to the Board for approval.

Main components of the **narrative** should follow this outline:

1. *Purpose and Goals:* Begin this section with a clear statement of the program's purpose. Include an explicit statement of how the program meets students' educational goals and career objectives. Also describe national or local educational trends, and discuss the faculty's expertise and commitment. Address the effect the establishment of the proposed program will have on the college; the relationship of the program to the mission of the college (specifically, the program's relationship to the college's priorities); and the extent to which the proposed program complements existing programs at the college. The potential quality of the proposed program in relation to comparable programs within and outside CUNY should be discussed as well.
2. *Need and Justification:* In the first part of this section, the proposal should consider the needs of the students, the college, and the community. Will the program, for example, contribute to specific state and societal needs? For proposals with professional or vocational orientation, please discuss employment opportunities and include specific job titles with salary ranges. Any relevant local demand for individuals possessing the knowledge, skills, and credentials conferred by the program may also be referenced. As future employment is a goal of most of our students, inclusion of similar information is encouraged for liberal arts programs. Inclusion of this information will be considered as strengthening the proposal. In the absence of such information for liberal arts programs, information indicating student demand for the curriculum should be included, along with letters of support from graduate or professional programs for which the proposed curriculum would prepare students. **The more specific the information that documents the need and employment prospects for graduates of the proposed program, the more credible the proposal will be.** Brief excerpts from articles and letters may be cited. Letters of support from prospective employers or experts may be included in an appendix. The second part of this section should reference similar programs that already exist at CUNY and at other local colleges. Any issues of overlap and duplication must be addressed straightforwardly. **Duplication concerns from fellow CUNY colleges should be resolved before the final proposal is presented.**
3. *Student Interest/Enrollment:* What is the present and projected student demand? A numerical table projecting enrollments, both full and part-time, for the first five years of the program's existence must be included (see page 79). State clearly the underlying assumptions about sources of potential students that led to these projections. Indicate the anticipated rate of attrition and state the underlying assumptions for this conclusion. Sources for projected students should be described in specific terms, with special attention to programs on the campus and at nearby units of CUNY that might send students to the program. Standards required of students seeking admission to the program must be spelled out in detail. Also include: the selection process for admitting students; arrangements for advising and counseling students; and any special support services that will encourage timely completion of the program.

4. *Curriculum:* In your narrative, provide an overview of the curriculum and statement of the intellectual rationale for the proposed curricular design. Articulate which courses are required; which concentrations, if any, are available; the type of electives; the number of credits for each course; the total number of credits in the program and any non-course requirements such as a thesis; comprehensive or language exam or clinical experience. If an undergraduate program requires more than 60/120 credits, a waiver must be requested of the Executive Vice Chancellor. Using the required SED form in Section VI of this handbook, provide a sample semester-by-semester sequence of a typical program. Complete course descriptions for all courses required in the major and complete course syllabi for all new courses must be included as noted in the OAA template for the Table of Contents. The second part of this section must address the articulation needs of the proposed program (please consult Section II of this Handbook for guidelines on preparing CUNY articulation agreements). The discussions begun before the first draft of the proposals should have resulted in one or more articulation agreements, at least one of which should be with another CUNY college. Describe these articulation agreements in this section. **Copies of completed and signed articulation agreements must be included in an appendix.**

5. *Cost Assessment:* Because a comprehensive assessment is needed to delineate all anticipated costs, it is suggested that these be addressed in separate categories as follows:
 - A. **FACULTY:** Briefly summarize the qualifications of available full-time faculty who will teach the required courses for the proposed program and indicate which courses can be taught by each faculty member. Complete the required SED form, a copy of which is included in this handbook. Specify the number of new full-time faculty that will be needed to offer the program. In addition, indicate whether adjuncts are needed to teach the proposed program and justify the use of adjuncts rather than full-time faculty. Please note that reliance on adjuncts for staffing new programs is strongly discouraged. It is also important to recognize that the use of existing full-time faculty to teach in the new program will affect existing programs. Explain how full-time faculty who will teach in the new program will be replaced in existing programs. Are there any replacement costs for full-time faculty or any release time needs, such as for a Program Director? Indicate any other support staff such as College Laboratory Technicians, College Assistants, etc. needed to offer the proposed program and justify the need for hiring such persons. Curricula Vitae of faculty who will teach in the program should be available upon request and no longer need to be included in an appendix.

 - B. **FACILITIES AND EQUIPMENT:** It will be necessary to consult with the college's Vice President for Finance and Administration to accurately prepare this segment of the proposal. Describe any special space needs for the program, including the availability of computer centers or laboratories. If space will have to be added, leased, or renovated, estimate the costs of providing and maintaining such space and indicate the source of funding. Any special equipment needed to offer the program must be listed with estimated costs and funding sources.

- C. **LIBRARY AND INSTRUCTIONAL MATERIALS:** It will be necessary to consult with the College's Chief Librarian to accurately prepare this segment of the proposal. Describe the library resources presently available to support the proposed program and then discuss any additional library needs that the program will create. Estimate the total annual costs for upgrading library support to offer the program. Address any needs for other instructional materials such as computer software, audio-visual materials, and subscription database.
- D. **BUDGET TABLES:** Spreadsheets outlining the proposed program expenditures and revenues must be included. There are separate Revenue tables for senior colleges and community colleges. Copies of the tables can be found in section VI. Please note that "Revenues" cannot be left as "zero" or "not applicable." Revenues are calculated on the basis of student enrollment, taking into account tuition and state allocation.

6. *Evaluation:*

- A. **INTERNAL EVALUATION AND OUTCOMES:** Explain how the quality of the proposed program will be monitored during the first five years of the program's existence. Include a discussion of the desired outcomes for students and for the program. Indicate the measures that will be used to assess these outcomes. State the criteria that will be examined, such as student achievement of specific educational goals, placement of graduates, and faculty performance. Specify which departmental and college officials will participate in the process.
- B. **EXTERNAL EVALUATION:** **This section is only required of all graduate program proposals.** The SED mandates that all new master's degree programs be evaluated by one expert in the subject area who is from a college or university outside the New York metropolitan area. New doctoral programs need two evaluations from outside experts in the field. In special circumstances, the EVCP may solicit an outside evaluation for an undergraduate program. The evaluators' names, positions, and institutional affiliations should be identified in this section.

7. *Procedure:*

- A. The full proposal must be approved by appropriate college governance bodies. This includes approvals of any new courses required to launch the program. Four copies of the proposal, with a cover letter from the college President or Provost, should then be forwarded to the EVCP, with a copy to the University Associate Dean of Academic Affairs, Dr. Ekaterina Sukhanova at Ekaterina.Sukhanova@cuny.edu and Mr. Ken Norz at Kenneth.Norz@cuny.edu. Receipt of the proposal will be acknowledged promptly.

- B. The proposal will be reviewed by appropriate staff in the OAA. Usually, this review is completed within 30 business days, and any issues or concerns that require clarification are communicated to the college in an expeditious manner.
- C. After any necessary revisions have been completed, the OAA staff returns the final proposal to the EVCP with a recommendation that it be presented to CAPPB for approval. **Please Note:** Colleges should not expect new draft proposals submitted shortly before the CAPPB deadline to be included on the agenda for the next meeting. In most cases, this is unrealistic. Colleges should allow sufficient time for the OAA to review the proposal carefully and for the colleges to implement any necessary revisions. The OAA will not recommend to the EVCP any proposals deemed incomplete or unfinished. Should there be special reasons for concern about a proposal being ready in time for a particular CAPPB meeting the proposing college should consult with the OAA staff as early as possible in the process.

The EVCP will make the final decision as to whether to recommend the proposal to CAPPB. The college will be notified in writing when the proposal is placed on the CAPPB agenda. At that time the college will be responsible for providing 14 hard copies of the final version (double-sided and stapled but not bound) along with an electronic version submitted into Sharepoint, our document sharing system. OAA staff will notify the college when to send these copies). Check with your Provost's office about the uploading of the document.

- D. The President and/or Chief Academic Officer will be expected to be in the audience during the CAPPB meeting during which the EVCP presents the proposal and should be prepared to answer any questions that may arise. Faculty involved with the proposal may accompany the President/Provost and may also answer questions if called upon.
- E. If CAPPB approves the proposal, a resolution incorporating that approval is placed on the calendar for the next Board of Trustees meeting. Once the Board has approved the program, the EVCP sends a copy of the proposal with a letter requesting registration of the program to the State Education Department.
- F. The Regents of the State of New York have the legal responsibility to direct and coordinate the development of the post-secondary education system of the state. The SED is the administrative agent of the Regents and is responsible for educational planning and program registration in compliance with established State statutes, Regents' Rules, and the Regulations of the Commissioner of Education. The SED review may take from three to six months or more, although in many cases this process takes less time. During its review the SED may request further information and, if this occurs, the College will be notified accordingly.

G. Section 52.1 of the Commissioner's Regulations, issued under the authority of section 207 of the Education Law, requires that every curriculum in institutions of post-secondary education be registered. **New programs may not be advertised nor enroll students until the College has received notification of registration from the State Education Department.** At registration, the SED will assign each new program a unique five-digit NYSED program code and will add the program to the State Inventory of Registered Degree Programs. SED will also assign the official Higher Education General Information Survey (HEGIS) code. A HEGIS code refers to a program's academic area and does not uniquely identify a program. The proposing college may suggest a proper HEGIS code but final assigning authority rests with SED. The list of correct HEGIS codes is available on page #.
