## Abstract:

The proposed Bachelor of Science (BS) in Healthcare Policy and Management (HCPM) is a 0-4 degree program that prepares students with minimal or no health care experience to enter into a robust labor market in health care planning, operations, and policy. HCPM provides enhanced didactic and experiential content to students with traditional academic backgrounds.

HCPM serves the continuing need to prepare students for health policy-related work, more important today than ever given healthcare's changing dynamics and demands to recalibrate its traditional operational/financial modeling. Matriculates will undertake discipline-related coursework in combination with practicums designed to provide the knowledge and skills needed for entry-level administrative employment in health care or to pursue a more advanced degree in a variety of post-graduate degree programs.

Also, HCPM articulates with the Associate in Science in Health Sciences (ASHS) degree or such similar AS degrees offered by the university and other institutions (e.g., AS degrees in community health, human services, public health, public policy, and health administration). Annually, approximately 900 students enter the College with interest in healthcare careers. Of those, approximately 275 eventually progress into competitive clinical disciplines. HCPM with its primary articulation through ASHS provides a non-clinical baccalaureate-level pathway to approximately 625 students seeking alternative healthcare academics at the College. At full enrollment and applying a 50% graduation rate to the ASHS cohort, potentially as many as 200-300 students per year would be eligible to enter into the HCPM degree from this source alone.

When compared to City Tech's +2 Health Services Administration (HSA) BS degree and its requirement for clinical licensure or work experience, HCPM establishes a non-clinical academic option to students without such health care experience. Additionally, approval of HCPM will enable the College's HSA degree to service the academic needs of clinicians exclusively as an "Allied Health Care Management Program."
