

David Binns
Culmination Project

Report 1:

For my Culmination Project, I'm doing sound editing for the 1941 Tom and Jerry cartoon. I'm editing the sounds by removing white noise in the background of the clip. I first watched the clip trying to identify any white noise or missing sound effects. Afterwards, I watched it a second time to write down the timestamps where the sound needed fixing and how long it lasted. For example, the static sounds started from 0:27 and continued to the end of the clip. In the beginning it was loud but as the video went on it became more quiet. This made it a bit harder to keep track of it because it gets overshadowed by the music and the characters movements. Afterwards, I downloaded the video onto my laptop, and am currently trying to make the edits and lower some of the sounds with the faders.
