

## Lesson Plan for Clinical Session #19

### #23 explorer for Dental Charting

Learning objectives:

- Become familiar with armamentarium necessary for hard tissue examination.
- Identify hard tissue lesions and restoration.
- Learn to identify class of occlusion.
- Become familiar with hard tissue charting in various systems (computer software and paper charts).
- Practice SOAP note entry of hard tissue examination findings.
- Demonstrate the use of communication strategies to provide information to the patient about any notable findings and provide referrals as needed.

At the beginning of **session 19** gather students in room A-713 for the presentation on Dental Charting and Hard Tissue examination. **Please allow 30-45 minutes for this presentation.**

Following a presentation demo dental charting in small group. Please discuss infection control procedures (use of the over glove).

Spend remaining clinic time on the following activities (divide time evenly between partners):

- Rotate patients in clinic, have student operator open their patient's existing chart.
- Faculty will assign 1 quadrant to complete dental charting using Clinical Worksheet and e-chart.
- Enter a short clinical SOAP note (only hard tissue exam findings, occlusion, begin to discuss Caries Risk)
- Time permitting: Instrument practice.
