

Clinical lesson plan for session #8

No new material is introduced during this session.

Do not rotate patients for this session. All students remain in their assigned cubicles.

Throughout the clinical session students practice Med/Dent Hx, Vitals, EO/IO & Soft Tissue Lesion Identification, 11/12 explorer using clock/seating, indirect/direct vision, and retraction methods, in all quadrants on each other, switching halfway through the allocated clinic time.

Faculty will set up a typodont in teaching cubicle of each section and conduct a **practice clinical competency on 11/12 Explorer:**

- Please use clinical IPads and follow the guidelines provided directly in the clinical exam.
- Use student code (found on the front page of the clinical grade books) for identification. This will be the standard for all clinical competencies this semester.
- Please note that this is an **ungraded exam**. The objective is to get students acclimated to clinical exams. Provide written and verbal feedback to students for reference.

After completing the competency students return to their cubicles and continue independent practice.
