

# Project Climate Conditions: NYC

- The annual average temperature across the state ranges from around 39 °F (4 °C) over the Adirondack Mountains to near 53 °F (12 °C) across Long Island.
- July is the average warmest month.
- In Huntington the average high July temperature is 23°C, while in Ticonderoga the average high in July is 81 °F (27 °C), the latter much further north, but in the former on Long Island, summer air is cooled by the surrounding ocean.
- The winters are very cold in the Plateau Divisions of the state. In the majority of winter seasons, a temperature of -13 °F (-25 °C) or lower can be expected in the northern highlands (Northern Plateau) and 0 °F (-18 °C) or colder in the southwestern and east-central highlands (Southern Plateau)
- The highest recorded temperature was 102 °F in 1966.
- On average, the coolest month is January.
- The lowest recorded temperature was -4°F in 1994.
- The maximum average precipitation occurs in May.
- Average precipitation across the region show maxima within the mountains of the Appalachians. Between 28 inches (710 mm) and 62 inches (1,600 mm) of precipitation falls annually across the Northeastern United States, and New York's averages are similar, with maxima of over 60 inches (1,500 mm) falling across southwestern Lewis county, northern Oneida county, central and southern Hamilton county, as well as northwestern Ulster county.
