

### Prefabrication Home

Prefabrication Home often called Prefab Home, are manufactured off-site in advance, usually in standard sections that can be easily shipped and assembled.

“Constructing manufactured homes typically involves connecting plumbing and electrical lines across the sections, and sealing the sections together. Manufactured homes can be single, double, or triple-wide, describing how many sections wide it is. Many manufactured home companies manufacture a variety of different designs, and many of the floor plans are available online. Manufactured homes can be built onto a permanent foundation, and if designed correctly, can be difficult to distinguish from a stick-built home to the untrained eye.”(Source#1)
