ARCHITECTURAL TECHNOLOGY

Architecture is a multi-disciplinary profession that includes aesthetic, technical, and human considerations in the design and construction of our built environment. We offer courses that prepare students for the broad range of responsibilities represented in the field: design, construction technologies, architectural history, building systems and information modeling, codes and professional practice, site planning, sustainable design, and digital fabrication, to name a few. An architectural education is excellent preparation for the hands-on, problem-solving, critical thinking, communication and collaboration skills that are sought by employers in any field.

City Tech's Department of Architectural Technology is known for its workplace-oriented curriculum, a student-focused environment, leading edge technologies, and engagement with real-world, community service projects.

In its role as the senior college of technology in the CUNY system, City Tech offers the most accessible architectural education in the metro area, with competitive tuition and a large enrollment capacity. Our 18 full-time faculty members are practicing, licensed professionals, and our 60+ part-time instructional staff hold prominent positions in city agencies and in the region's leading private firms.

WHAT IS ARCHITECTURE?

As an educator I often return to that fundamental question. Architecture is difficult to define. There is no one definition of Architecture that everyone will agree upon. In my opinion, Architecture is the art of solving a problem. There exists a multiplicity of approaches to the creation of Architecture.
- Response from Professor Lia Dikigoropoulou

Architecture is the opportunity to understand a little bit of everything life throws at you. Everything you learn in life leaves a mark , a path for another individual with the same journey. Architecture is marker for those always want to go the extra mile, go a little taller, be a little better. It's a process and the road to success.
- Response from Walkiria Cabrera, Graduate of 2015, Cum Laude

EXTRACURRICULAR ACTIVITIES

Architecture Club
Intersections Symposium
Peer Mentor Program
TECHNĒ (Student Publication & Exhibition)
Digital Fabrication Club
