DESIGN NARRATIVES AND CONCEPT SKETCHES

The proposal design of my library will have two access points, one is from the side of Clinton Street and another side from Cadman Plaza W. The two entrances place in two streets allow people live near that street to get to the library more convenient. There will be three stories height of my library, one story will have different height among the others due to different programs. The massing of my library will not be simple rectangular form. Estimate height of the whole building will be 40 feet.

There are many schools, restaurants, church and other business surrounding the site and one library near the site. For this project I will focus on the students, worker and people who go to worship. The age of the people to visit the library is not limited, everyone can come to the library and borrow book. There is a library that is near the site, so the programs of my library will has some programs different from that library to attract more people to come to my library instead of that one.

The public programs of the library definitely has information center to help people to find books and answer visitor's question about the library. The first and second floor will have book collection on many subjects like cooking, history, economics and religion and has book collection on many types of language. This library will had a café and computer workstation place in first floor. For the private programs will be classroom for student to do their homework and research on the project. There will had office for the staff and auditorium for presentation.
