

Design Problem of Concept (What does the Design Problem the concept addresses? 2-3 sentences)

I want to create an app where artist get to reach out to each other for collaborations, to find out where they are from, critiques and much more. I got this idea from an app I was featured on where they showed my music but I never got to interact with anyone.

Description of Concept ("Elevator Pitch" 2-3 Sentences):

Functions of Concept (be as concise as possible): Use the table below to identify **six** concept functions. Justify each function according to the concept description and solution.

	FUNCTION	JUSTIFICATION
1	One main function of the concept is... to have artist interact with one another. - for each screen create mockup of interface.	This function is needed because... not too many artist are able to really reach out to other artist who can compliment each others style of music.
2	Give critiques. - Imagine what the screen will look like to the user.	You will be able to get responses of your music outside from your circle.
3	Have artist find other artist in their local area and near.	If you aren't doing too many events then you won't be able to reach to that many artist.
4	Have access to hear their music.	Gives another source for music to be heard.
5	Make connections.	You will be able to find other engineers, producers etc. as well.
6	Set up plans with other artist.	You could be able to set up shows with other artist to help your fanbase grow.

→ Deliverable = mockup
