Perler Pro

Colorful Crew: Ryan Yip, Andrew J. Charles

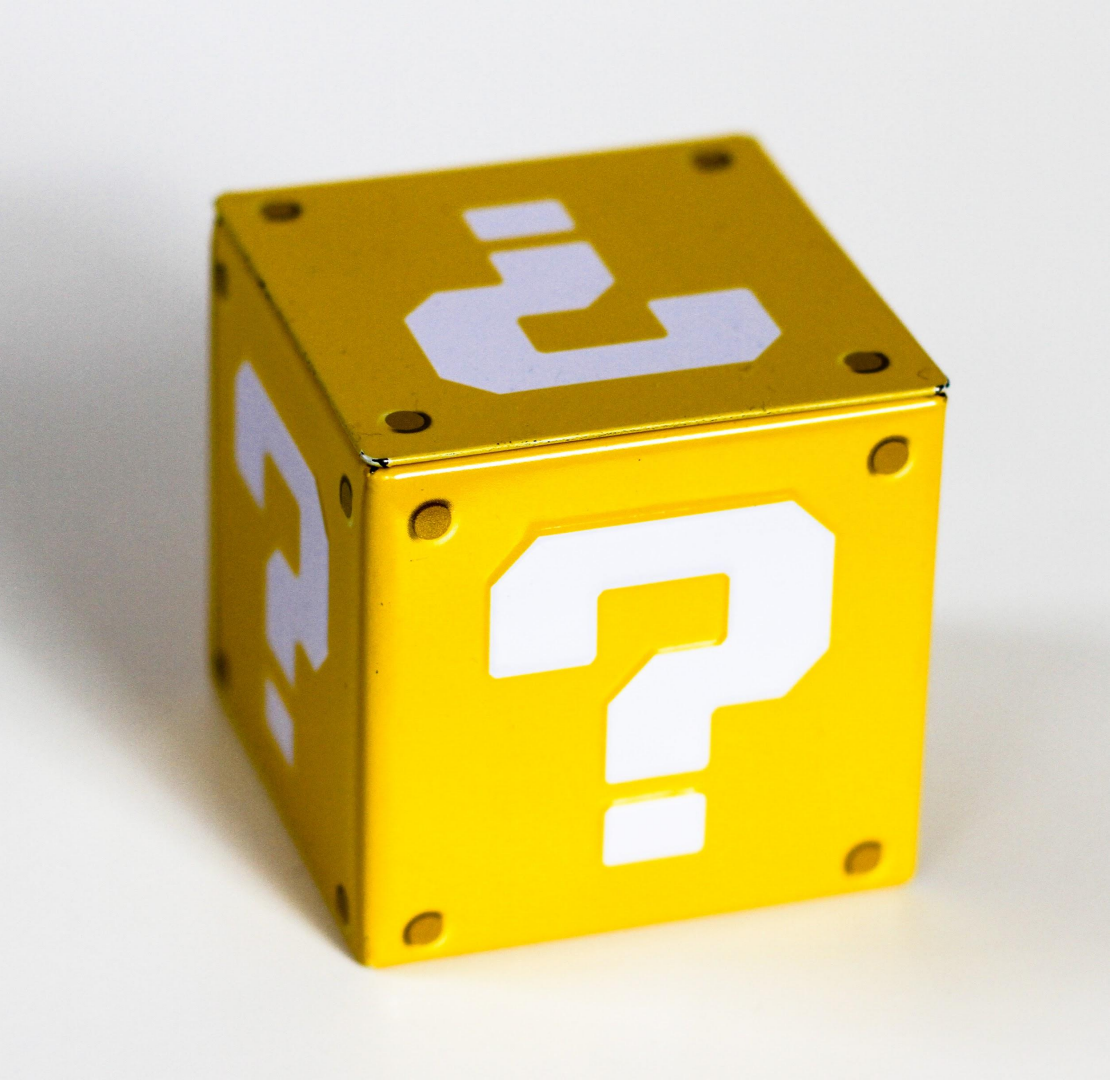
Midterm IMT 1102: April 2, 2015

Project Description

We want to create an app that will help artists with their perler projects. Perlers are a unique way of expressing one's love for the simpler times when graphics were restricted to colorful 8-bit sprites.

Target User Group:

Everyone and anyone with a love for perlers. The perler community is vast and interesting. This app will help artist as well as give other users something to do while they wait on the train or bus.



Problem Context:

Perlering is a difficult and daunting task. Perler Pro aims to help with the process and provide tools and services for easier use and creation.

Motivation:

We love Perlers. Perlers are a great form of art that is simple enough for anyone and everyone to make.

Solution:

Perler Pro!!! With Perler Pro we aim to make perlers more accessible to people who want help in their next project. Perler Pro has tutorials to help newcomers to the art or perling, a scanner to outline and lay out a perler template, digital editor and constructor, and social media sharing to show your work to friends.

Outcome:

With Perler Pro the art style of perling will be more accessible and easy to make. You can scan an image to construct a digital replica and share it with your friends.
