Technology influences our existence by bringing new risks as well as improvements to our lives. The social lifestyle of an individual involves technology in some way. Technology has become a necessity in these modern days and it is going to become more advanced as time goes on.

My idea is something easy to learn also easy to master with patience, practice and dedication. If both ideas are combined it can bring a higher level of uniqueness to everyday life. Telekinesis is the process of moving objects with your mind with concentration and focus. At first you would buy the headwear that is required for you to use the mind control feature. That headwear is similar to a headband, the band will connect to your phone's Wi-Fi/Bluetooth capabilities so your band doesn't interfere with someone else band. The band will use Electroencephalography otherwise known as EEG. EEG is the recording of electrical activity along the scalp. EEG measures voltage fluctuations resulting from ionic current flows within the neurons of the brain. To use it's fairly simple all you have to do is clear your mind and concentrate on the task you want to do such as: open Facebook, go home, go to messages, open weather, etc. There are some task the band will not be able to do. (You will find out what by reading the instructions.)

This new technology will take off and go to new heights. I know it can benefit me because Im a person who multitasks doing multiple things at once and with the band I will be able to do two things at once without having to keep the phone in my hand. I can write out my homework and have the phone next to me and text my friends without having to put my hand on the phone at any given time. It can be beneficial for different people; to the teen thats playing chess on their phone focusing on there next move to an elderly person that had a slip and fall and can't use there fingers to dial for help. This idea can evolve into something good and there are designs and feature will just improve and grow.
