

# ARCHIEVES 3D

Kevin Pintado

# Overview

- Use of the 3D scanner (Einscan h2) to scan my personal shoe collection and have them be showcased in my portfolio based website.
- Use of images and create a neat website showing the technology behind 3D scanning and 3D printing
- Have an appealing aesthetic with a website where its visually appealing to people interested in 3D modeling or streetwear fashion.

## New Current Ideas :

**LUMA APP:** This app allows users to capture high-quality, lifelike 3D models using AI-powered photogrammetry. It is designed for creating photorealistic 3D assets and environments, commonly used in game development and visual effects.

- **The best thing about this app is I am able to scan using my phone and able to acquire an obj file which I can put into blender or ultimaker and turn into a stl file to be able to 3D print my file**

# EXAMPLE VIDEO :

# Budget

- Blender - FREE
- 3D Printer - FREE
- Fillament - \$40-\$60
- Readymag - FREE
- Ultimaker cura - FREE
- Videos and Audio - FREE
- USB / STORAGE - \$20
