Assignment 7

I have a lot of thoughts and visual ideas that come to my mind when reading the questions that you offered us and by the readings too of course. I think I will try to do a little of both this time.

Technology is very helpful but also dangerous. The twin that it helps provide is almost endless it seems endless. Technology helps people personally and professionally as the reading said. That is something I agree with. Technology also helps science and medicine advance, technology even gave people like me a future job. I am a graphic design as well as a ~~artist~~ artist who also works digitally.

The advancement of technology has helped my field grow and will help it keep growing in the future.

Technology is changing everything. I feel that nothing is off limits. Technology is consuming every inch of our lives and worlds as humans. Light bulbs, electricity, solar energy, computers, jobs, our phones they have become a part of our norm or our everyday.

I feel like the world is becoming desensitized because of technology. People are not grateful for the benefits that technology have made possible. This generation's children are a clear example of this. Generation Alpha is growing up with smart technology. They are growing up with smart phones and...

tablets at their finger tips.
I see children who cannot
talk anymore ipids with
ease to go on youtube. My
2 year old nephew and
3 year niece did it.

What I find interesting is
that this excerpt is saying
the same or very similar
things. And I know that this
was not written yesterday.
He says that technology is
shaping/warping human life
and that media is more
in control than ^{formit/verast} communication.

I find it interesting because
I wrote the example about
my niece & nephew before
I read the part about
how children are in my
understanding and many
easily interested in technology
and pick it up fast and
are motivated by themselves

to do such.
