Demographics

Norma Colon /Nicoleta Koubek

"Measuring Race and Ethnicity Across the Decades: 1790-2010_Intro." *Measuring Race*

and Ethnicity Across the Decades: 1790-2010_Intro. N.p., n.d. Web. 08 Nov2015.

References and interactive visualization of how race/ethnicity have change over

time since 1st census in 1790

This source is about an official survey of a population, generally recording

various details of people in a specific area, called census, when visiting the

website it guides us to a table graph which indicates a timeline that reveal the

increase or decrease of people, and gives specific information of gender, ethnicity

and race size, etc., also give us a background of how this method is applied

throughout the years from 1790 to 2010 to learn about the demographics, I

selected this source because it's an excellent way to learn and get information of

all people of this group. When you go to the web page www.census.gov it opens

to a timeline/ table graph and starts to map information and history that took place

long ago, we are able to see the number of populations as early as the 1790, it

allows us to click on each time and give us a brief explanation of what took place

in the time period.

Rosenwaike, Ira. "Population of New York City by Race and Annual Percentage Increase

in Intercensal Period, 1786-1820." *Population History of New York City*.

Syracuse, NY: Syracuse UP, 1972. 18-54. Print.

E. B. Greene and V. D. Harrington, American Population Before the Federal Census of

1790 (New York, 1932)

This source is about the several ways that the U.S government registers or records

people in New York City – Kings County over time, allowing us to take a look

into the country's past, a timeline of the slavery as well as the immigrants that

came to the U.S on its shores. I chose this source because it would help us get a

better picture of the population in the 1771,1800 and 1900s. In Table 1, labeled

"population of New York City county and Kings County by race, 1698-1771". It

shows us the percentage growth as well as the decline of people, black and white

population in that time.

http://www.census.gov/. Web.

This website is based on national demographic statistics done every ten years.

Each state from our country has a certain number of representatives or

congressmen and this number is given to a state according to the number of

people who live in that state. The House of Representatives decides how many

congressmen a state has based on the statistics from this governmental website.

The Congress is a very important legislative power of the United States and in

order to make a fair decision on the number of the Congressmen for each state, it

needs to have a good source of information. Given the fact that the Government

makes decisions based on the information found on this website, this makes it

very reliable source of information.

"Welcome to NYC.gov | City of New York." *Welcome to NYC.gov | City of New York*.

N.p., n.d. Web. 08 Nov. 2015.*http://www1.nyc.gov/site/nycha/index.page*. Web.

Our group task is focused on Farragut Houses and Vinegar Hill, the area where

these project homes are located. This project complex functions under the New

York City Housing Authority (NYCHA). An important amount of information

about these projects can be found on NYCHA website. NYCHA controls who can

come and live in Farragut Houses. Since Farragut Houses functions under the

jurisdiction of NYCHA, this website is very useful and reliable. Also, it provides

updated information about the number of people living in these projects. As our

paper emphasis is the demographic of the area with a focus on the demographic of

this buildings, the information provided by this website is the most specific source

of information for our assignment

http://www.nyc.gov/html/doh/html/data/data.shtml. Web.

The website New York City Department of Health and Mental Hygiene offers

important information about different categories of residents who populate our

city. It is a governmental website that provides statistics about the New York

residents in several categories such as race, religion, income, physical and mental

health status. It also provides information about environment, emergency

preparedness, food, water, and health alerts. Furthermore, it comprises data about

the most prevalent health problems encountered in New York together with health

promotion and disease prevention. This is one of the most reliable sources of

information used for research by health care providers.
