### Field Trip to United Federation of Teachers

At the United Federation of Teachers we seen how booklets and newspapers are printed and produced. There we learned how things are printed on and how big paper can be in order to print a specific image. One cool thing that i found pretty interesting is when the paper was being cut. Once they did the sizing once after that the machine automatically put the settings for the rest of the stacks of paper in. Also when they are cutting they will have the laser that will stop the whole much from cutting if the line was broken. This feature help with people's safety. This prevents people's hands and limbs from being chopped off by the machine. Another cool machine I found pretty interesting also is the long printer they had to type the letters. It was cool because it looked so old fashion. I've never thought they would print it that way. I thought they would've done everything by computer. I liked the fact they had multiple printers setup ready to go at any given moment. Even though I felt like they had way more than enough to print. I did not know that printing something can be so complex and so majestic. But also felt it was a lot of information to take in all at once. And at first I thought we were going to see a whole bunch of machines just stacking of paper and just print by the boatload.

In the end I felt like this was a very good experience for because now I have a better understanding how things go when it comes to just printing something as simple as a poster to

have when you are rioting against the government. These people really like what they do and they are very good at it.
