

WHY PARALLEL PARK?

The Chevrolet Bolt can do it all.

From its airy, intuitive interior, to its technologically advanced central touch system, this smart car takes a special turn at its automatic park-and-retrieval technology.

Parallel parking has got to be one of the most dreadfully annoying things to do on the road, especially when you're in a rush. In fact, in the past year, 30% of accidents were from parallel parking. But no more -- the Bolt has your back.

Drivers can leave their vehicle and command their Bolt to park itself, all while running their errands. Later, after they've finished, they can call it back to where they are. With this smarter than smart car, parallel parking has taken a back seat.

You won't worry about it anymore.

FEEL LIKE FLYING?

Driving has never been this fun before. Vice President of GM Global Design, Ed Welburn says, “Form and function have never meshed so well together”, and boy was he right.

The Bolt EV Cabin consists of a signature dual-cockpit layout with sleek and efficient features that offer you with a one of a kind driving experience. An advanced lithium-ion battery provides over 200 miles of all-electric range.

When you’re cruising down the highway, you can feel free to kick back and enjoy the view. Auto pilot isn’t just for planes anymore. With Autopilot activated, the Bolt automatically steers itself and controls its speed to match traffic. No need for you to worry.

It can be done.

HATE FIDDLING WITH YOUR RADIO?

As if the innovative and uncompromising design of the Bolt's unique silhouette weren't enough, we've also decked out the interior with a stylish contemporary, light color scheme to provide you with a warm, room feel.

But to top it all off, the Bolt has a built in central touch system – a 10-inch diagonal screen, with interface features. The concept Bolt EV Connect App allows you to connect with this touch system from your phone and vice versa – what ever data appears on your phone, you can view onto the screen.

With just a quick tap or two, you can access a wide array of electronic readouts. Stop struggling to tune your radio, switch those stations, or change the volume. The touch system does it all for you. It's like magic!

We're glad we've found the perfect solution.
