

"How to read like a writer?"

Mike Bunn

At first I was a bit confused by what the title meant but after the author explained it, it made a lot more sense. I saw it as looking at the backend of a website when you usually only look at the front-end.

What did the author mean when he said, "Genre means a few different things in college English classes". What are the other meanings?

I noticed that having stories in writing or jokes grab my attention more. I will try that in my writing when it is appropriate.

I always thought about this question when writing, "How effective is the language the author uses? Is it too formal? Too informal? Perfectly ~~app~~ appropriate?"
