

WHAT CAN WE DO TO SAVE OUR ENVIRONMENT?

Destruction of Earth

Ways we are Destroying our Environment

The burning of fossil fuels like oil, gas, or coal, vehicle exhaust fumes, improper landfill waste management brought on by garbage pollution, toxic fragrance, or off-gassing from the manufacture of plastics, paints, etc are ways of the destruction of the earth.

Climate Change

Due to greenhouse gas emissions, pesticide and fertilizer waste, biodiversity loss, and the disruption of ecosystem services brought on by the conversion of large parts of natural ecosystems into pastures and crops, the production of food also pose severe environmental issues. This causes climate change.

Tips to save our environment

Planting more trees

Instead of putting our leftover food and yard waste in the garbage, compost them. This is an easy and obvious thing that regular people in every community can do to protect the environment. Recycling is important for protecting the environment. Littering is a major issue for our ecosystem. We must plant as many trees as we can.

Composting Food Waste

SUSTAINABILITY

We have the power to protect the environment. When lights aren't in use, we should switch them off to save electricity. Use reusable things like cloth bags in place of disposable ones because plastic cannot be recycled. In addition to saving water, picking up litter, reusing paper, caring for animals, and planting more trees, we should separate and recycle our waste. It's important to make our city sustainable. These green practices can help in protecting our environment. It means that it will allow us to live well without destroying the environment or destroying our natural resource supply. These are methods that we can help the earth remain sustainable.
