Safety is in danger of being compromised and it will have massive consequences for the people who work, go to school, and many more. Will feel endangered if they step outside their homes and there have been laws that you cannot prevent them from sleeping in your yard because they have not officially broken into your place of residence with all these laws adding on the issue has become worse. The reason I have mentioned this topic is that it massively increases the stress of communities and would then lead to more violence by having most people equip themselves with weapons. So, us young adults need to understand that these laws are affecting the people's mental health so we need start paying attention and be aware of what is happening so we can make changes and we can do so by supporting the new governor that was elected because she is providing what we need but we need to make sure that it is what we want instead of what we are getting.

You must be wondering why I have chosen a public service announcement, and the reason I have chosen public service announcements to target young adults. Most young adults have short attention spans which are ineffective in trying to get your message through if you want to bring awareness to gun violence and public service announcements are impactful by being visual with essential information that will help attract their attention. The steps to get their attention would be to get useful data about the production rate of licensed gun manufacturers and talk about how their rate went up by 255 percent from 2009. This would show that people are only looking at surface level problems and not talking about the responsibility that the manufacturer takes. There would be information in chains like what is shown what happens when you investigate it and you will find out more but since it is more like an informational poster it cannot contain paragraphs of information the way to best way to grab the audience's attention would be to give the audience the image of a boulder and its rolling down and is destroying public safety by going downhill and each part shows an effect that makes the problem bigger and bigger.

We the Citizens and Immigrants of America need to come together to make changes quick and fast because can you picture it the whole of NYC, people on the streets, work, schools, etc. you will not know or cannot tell if they are carrying a hidden weapon and as you know what the results will become. Who do you think almost made these policies, and yes it was congress so we need a representative that will ensure our safety without affecting our rights.

To write in a different format and an public service announcement it doesn't really need to much information because I had done the research in unit 2 where it had information and I just need to format the information in a way that grabs young adults eyes and make them aware how gun violence where there are shootings are just the surface level problems that can be prevented if the laws that allow people to carry hidden weapons in public with a license made it difficult for people to obtain but it's easily obtainable and so is a gun. That is why I believe that licensed gun industries have increased their sales from almost going bankrupt during a time when there was not as much violence as there is today to their mass production and not fault being taken by them.
