

## **Telecommunication Engineering Student at the City College of Technology**

Dear Electronic/Telecommunication Engineering Agencies,

New York City College of Technology has the most versatile engineering students found in the CUNY and SUNY [schools systems](#). Our college has one of the highest percentage in graduation within the whole CUNY system. With cutting edge technology by our side like fiber optic simulation systems, high quality diagnosis oscilloscopes, we are prepared for the work force because of the constant help and leadership our professors provide us.

This school has its students trained in the most rigorous classes that prepare us for everything the job site has to demand and more. Theory and labs are drilled into our heads that make us efficient machines. We don't need to say much because our grades speak for themselves. Most of the students in the engineering departments maintain an average of 3.2 and above. This promotes a sense of competition that makes every student want to be the best. It is a never ending cycle that pushes students beyond their limits. Professor Mirandi is one of the top engineers we have in our department who happens to be well known in the engineering community. He states that even though we belong to the CUNY system, we provide the same intelligence private universities do.

We can guarantee that if you choose us, you will not regret it. We will provide you with the highest level of service like completing tasks efficiently in a time effective manner with the least amount of supervision possible and in return we acquire valuable experience that we can use to enhance our work performance in any job site. I'm sure that after you have seen what we can do you will NOT let us go and hire us. It's a win-win situation. You get the highest quality of work and you will not have to pay what you would to a full-time employee, and we get the experience we need from top notch companies.

Whenever you have a chance please call us. You can contact Dr. Doh whom will give you the qualified students. It's not like you're getting just anyone. In order to qualify the students must have at least four courses in the field completed, and will be the best we have to offer. 100 hours minimum in a work place, and must present substantive work supervised by a qualified mentor. You can contact Dr. Doh at Dr, Pla Y. Doh
