

## I'M Awake Lindelle Anglin 09/13/2014

Since it's invention the alarm clock has impacted lives and helped to keep us on time. As technology developed so did the alarm clock to the point that is has gone digital and multiple alarms can be set. It has also become one of the default applications on most devices today. Yet with all of these advancements users could still run into the annoying problem of their alarms going off even after they have gotten up and begun their daily routine. The answer is a simple yet innovative solution, an "I'm Awake" button. Once a user has woken up and turned off the first alarm they can press the "I'm Awake" button in the Drop Down(notification menu) to deactivate all remaining alarms for the rest of the cycle(Morning).

Identify a real world design problem you have observed your surroundings or environment. This problem could be political, local, systemic, or even related to your school. After some initial brainstorming, you will add structure to your ideas by completing the following ideation scenarios.

<u>**1 User:**</u> *Identify the user, based on the target user group.* 

Any and everyone who uses an alarm clock app whether it's often or once in a while.

**2 Context:** Describe context or situation in which the problem exists

Often enough someone may set multiple alarms before going to bed in the event the first does not wake them up. If for some reason the user forgets to turn off the others they will have annoying and unnecessary noise disturbing their morning routine.

**3 Motivation:** Describe an incident or condition that motivates the use of the solution.

I personally use my phones default alarm application and usually wake up after the first alarm has sounded but, most of the time i forget to manually turn of the others to avoid disturbing family members.

**4 Solution:** Show how they access and use the solution to address their need.

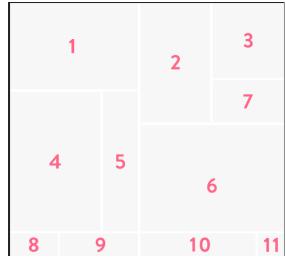

Once the user has woken up they can press the "Im Awake" button which will deactivate all following alarms until the next day.

**5 Outcome:** Describe the outcome of the situation – the payoff, the problem solved, and the happy user.

Users will no longer have an annoying reminder to get out of bed when they have already begun their day.

INSTRUCTIONS: This sheet will be used to document image attributions used for proposal Moodboards. Students will keep the screenshot of the template they choose for their Moodboard. Then, using a numbered list, students will provide linked image attributions. Image attribution will be completed in 2 parts. Pt1: Students may save links to images. PT2: Students will transform links into formal image attribution. (delete these instructions for final submission).
