

Digital Revolution (Computers)

1. Why haven't computers overtaken humans?
How big is the world of computers ?
2. Computers are a great tool, we use them in almost every single aspect of our lives. There is so much that we don't know about them. When I think of computers I see them as a new world, we can do almost everything in the digital world. There are so many restrictions and people that really understand how computers work at the expert level they can pay around and literally do what they want in the digital world.
3. I want to know how computers really work. I want to have the freedom to navigate the internet and do what I want in a good way of course. I want to have the power to create my own digital world. Coding will be my third language.
4. .
5. We started in the 90s with huge computers. Now we have devices that fit in our hands and can work much better and faster than back in the 90s. We communicate much more around the world, the information travels in seconds. The capacity of computers is increasing exponentially until the point they surpass humans in knowledge and distress.
6. When will the computers surpass humans in every single aspect?
