The effect of covid-19 on my life and education

Prof Sears

An event that impacted me the most during these times would be Covid-19 which has impacted the way i learn and the path of my education for this year, It has also impacted my personal life showing me that I do not have the necessary resources to complete certain classes in college and i feel like having to switch to online classes prevents me from experiencing college in person making new friends, and seeing what college really is about. Instead I am doing everything online and through a camera on a computer. The normal stuff that I would do in the morning before I would head to school, I am not able to do that anymore like I used to do it's kind of a let down in my opinion. Having to change my daily schedule of things that I would normally do to fit in multiple papers for numerous classes some in which are being due on the same date as well as my classes for coding makes me struggle even more and question my abilities when it comes to college work.

Covid-19 has affected the educational system in many different ways, because of Covid-19 it changed the natural flow of how the school works because everything went from being in person to online it was sudden leaving some teachers caught off guard. Even now as school for the younger kids is being planned and talked about some teachers are being forced to go back in person to teach kids putting not just them but

also the kids at risk of catching the virus. As well as some kids not having the resources at home to do online work such as computers, printers, etc.

From my personal experience my brother is a teacher who teaches high school students. He is mad because when he went to school in person he had a co teacher with him but the school is telling him to go back in person while some of the other teachers stay at home. I understand why he is upset because he has a lot of kids that are coming back in person putting him and the other kids in the class at risk of getting the virus. Yes, I understand that the school system needs money but right now is still not good to open back up the schools and Florida is a prime example at that as you can see what happened when they did that.

Covid-19 plays a role when it comes to race because China pretty much started all of these. It made everyone keep their distance somewhat from "asian" people, Donald trump is one of the people to show us how true this is because of what's going on he is banning tik tok because its a asian based company. This also affects other people because there are people on Tik Tok that make money off the app here in the usa. But the bonds between the U.S and China are slowly falling apart and it shows a lot that covid-19 doesn't just affect everyone here in the U.S but other places in the world.

In conclusion even though i am stuck doing everything online doing college online has its benefits it helped me understand my computer much better because before covid-19 I didn't really use my pc that much so i only knew the basics on how to use it but now I know more options about everything. College online helps improve my critical thinking when it comes to the work I have been doing so far, I still have a long

way to go to mastering my craft. But until this virus is out of the way I wont be able to truly go back to my life.
