ENG 1101

16 November 2020

What I hope to teach my audience is what Covid-19 has done and the ways protecting ourselves from virus. I want to them know how virus easily can separate around people and it can kill many people in the future and I want explain we can be healthy people if we follow to government's safety rules. A lot of people death from virus and we should look at this current virus serious and wait until vaccine come up, then we can save people's lives. I want to write something like a newspaper and take a good notes about article.

The quotes from unit 2 research that really stood out to me the most was “

Closing public schools and public places will save people from infecting from virus and communicate, work studying online will be more useful also helpful at this hard time. Online life will save humanity lives from virus” this quote inspire me because a lot of people death from virus and online working or studying will help do what we did in the past, also it will protect each other infecting of virus. We should be patient and wait until vaccine will start to separate around world then we can live as regular life as we had in the past
