

# K-Mash

## Audio Engineer: Sophia Lau

Department of Entertainment Technology

### Introduction

K-pop also known as Korean pop originated in South Korea. It has been a trend for a couple of years and it is being acknowledged globally. What attracts the people's interest for K-pop is the performance which includes the Artist's strong choreography and music. For the artist's music to sell and become a hit, the aspects of the music itself is very important. My goal is to combine different songs to form a track and sync them so that it would sound like a song on its own.

### Goal

- Gain experience in creating and mixing music
- Recreate a song using different music based on beats, melody, and lyrics
- Sharpen audio skills and enhance listening skills

### Work Break Down Structure

Start Date	End Date	Description	Duration (Days)
27-Aug	7-Sep	Research for songs and take notes	11
14-Sep	23-Sep	Come up with a concept, select songs to use, arrange parts in sequence	9
26-Sep	5-Oct	Import song choices to software and arrange for the parts needed	9
7-Oct	8-Nov	Recreate and record beats or search for samples similar to the beats of the song	32
11-Nov	25-Nov	Record vocals	14
28-Nov	11-Dec	Make edits and add effects to vocals and recorded sounds	13

### Materials

### Methods

#### Logic Pro X

#### Pro Tools

### Conclusion

- ~Time and Patience is important
- ~Experiential
- ~Increased knowledge of:
  - Pro Tools Software
  - Logic Pro X Software
  - Editing audio
  - Reproducing sounds

### Credits for Songs used as reference

- JJ Project (Tomorrow Today, Icarus)
- B.A.P (All the Way Up)
- Stray Kids (Mixtape 2)
- Got7 (I am Me)

### Results

A song from recreated sounds and vocal is produced
