Envelope Stuffer

The United Federation of Teachers is an organization that represents hundreds if not thousands of teachers. It is because of this they require a lot of documents to be sent out every day. This machine in the picture above places folded documents inside of envelopes at a faster rate. It can stuff several papers into several envelopes faster than by hand. This allows several documents to be put in letters at a time.

Offset press

This machine prints from premade templates and helps to get these papers out faster. Offset printing is a commonly used printing technique in which the inked image is transferred from a plate to a rubber blanket, then to the printing surface.
