

10 REVIEW SHEET

The Appendicular Skeleton

Name Brianna Garham

Lab Time/Date _____

Bones of the Pectoral Girdle and Upper Limb

- 1.** Fill in the blank to complete the statements below:

- The bones that form the pectoral girdle are the Clavicle and Scapula.
- The upper limb is formed by the arm bone, the humerus, and the two bones of the forearm, the radius and ulna.
- The Carpals are the wrist bones. List the proximal row of wrist bones from lateral to medial: Scaphoid, Lunate, Triquetrum, Pisiform.

List the distal row of wrist bones from lateral to medial: _____

- The Metacarpals form the palm of the hand, and the heads of these bones form the knuckles.
- A single finger bone is called a Phalanx. Each hand has 3 finger bones, called Phalanges.

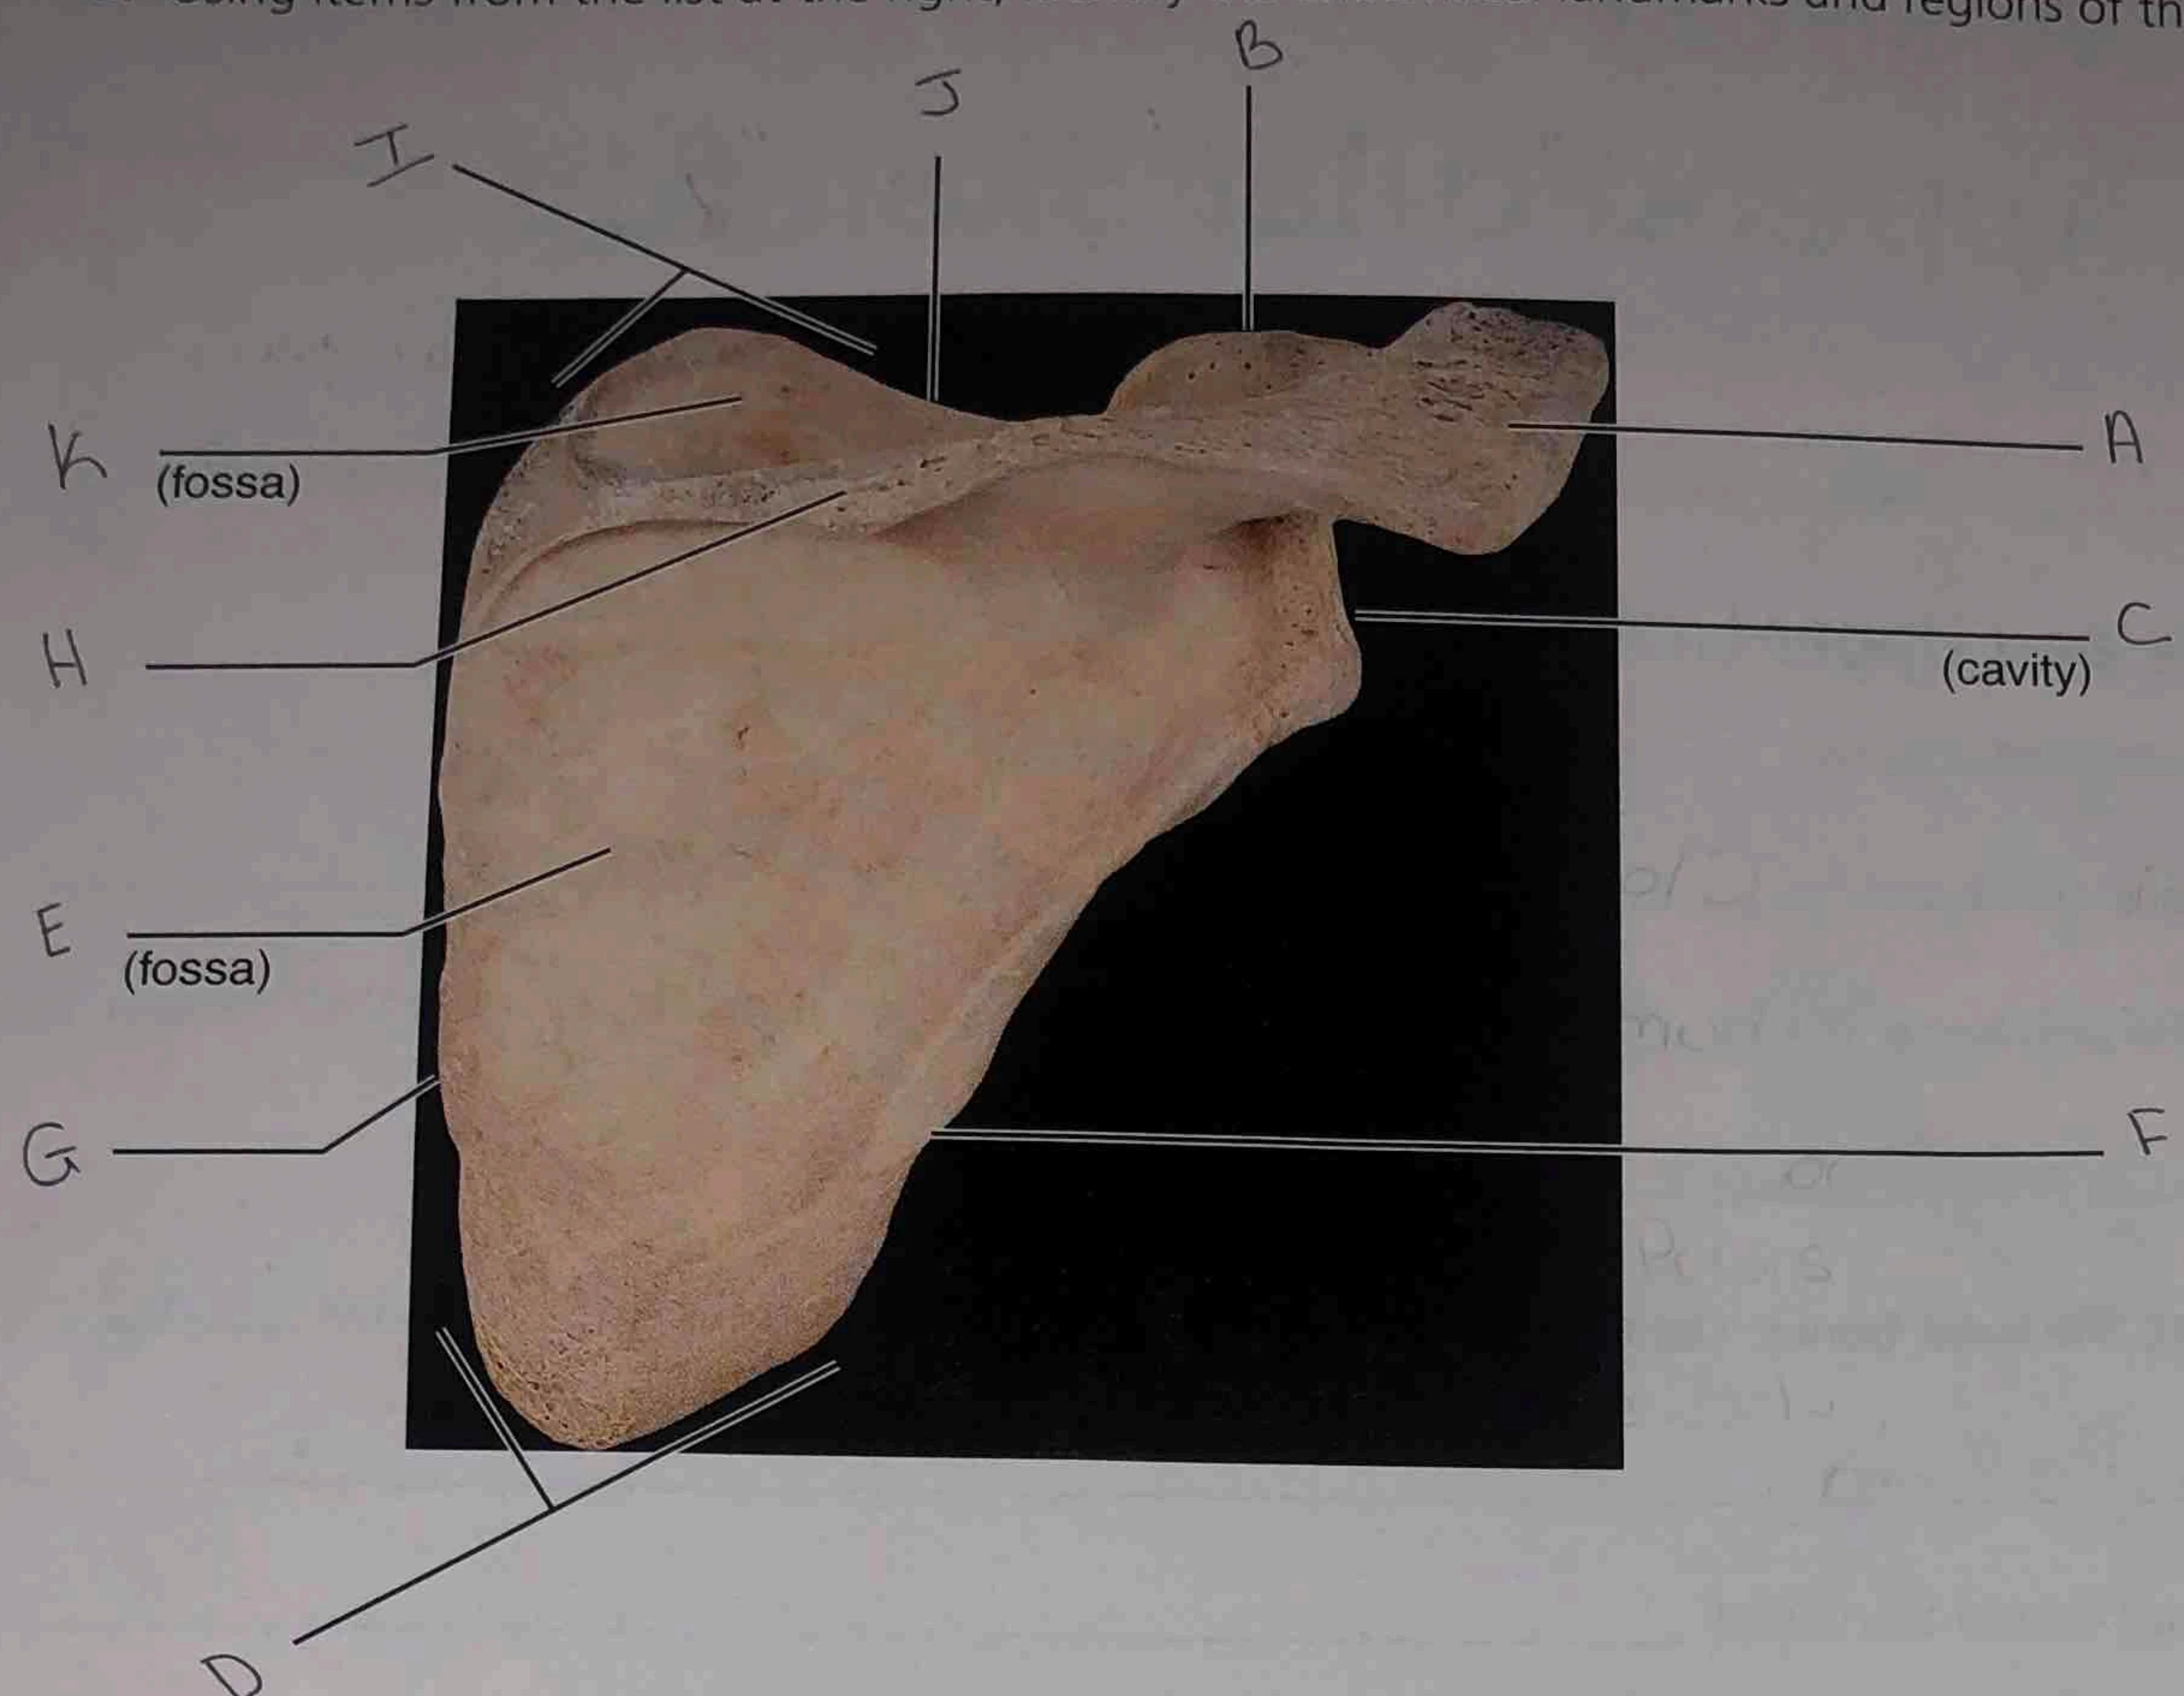

- 2.** Match the bone markings in column B with the descriptions in column A.

Column A

Column B

- | | | |
|----------|---|-----------------------|
| <u>F</u> | 1. depression in the scapula that articulates with the humerus | a. acromion |
| <u>K</u> | 2. surface on the radius that receives the head of the ulna | b. capitulum |
| <u>B</u> | 3. lateral rounded knob on the distal humerus | c. coracoid process |
| <u>H</u> | 4. posterior depression on the distal humerus | d. coronoid fossa |
| <u>E</u> | 5. a roughened area on the lateral humerus: deltoid attachment site | e. deltoid tuberosity |
| <u>C</u> | 6. hooklike process; biceps brachii attachment site | f. glenoid cavity |
| <u>T</u> | 7. surface on the ulna that receives the head of the radius | g. medial epicondyle |
| <u>G</u> | 8. medial condyle of the humerus that articulates with the ulna | h. olecranon fossa |
| <u>A</u> | 9. lateral end of the spine of the scapula; clavicle articulation site | i. radial notch |
| <u>S</u> | 10. small bump on the humerus, superior to the trochlea, often called the "funny bone" | j. trochlea |
| <u>D</u> | 11. anterior depression, superior to the trochlea, that receives part of the ulna when bending at the elbow | k. ulnar notch |

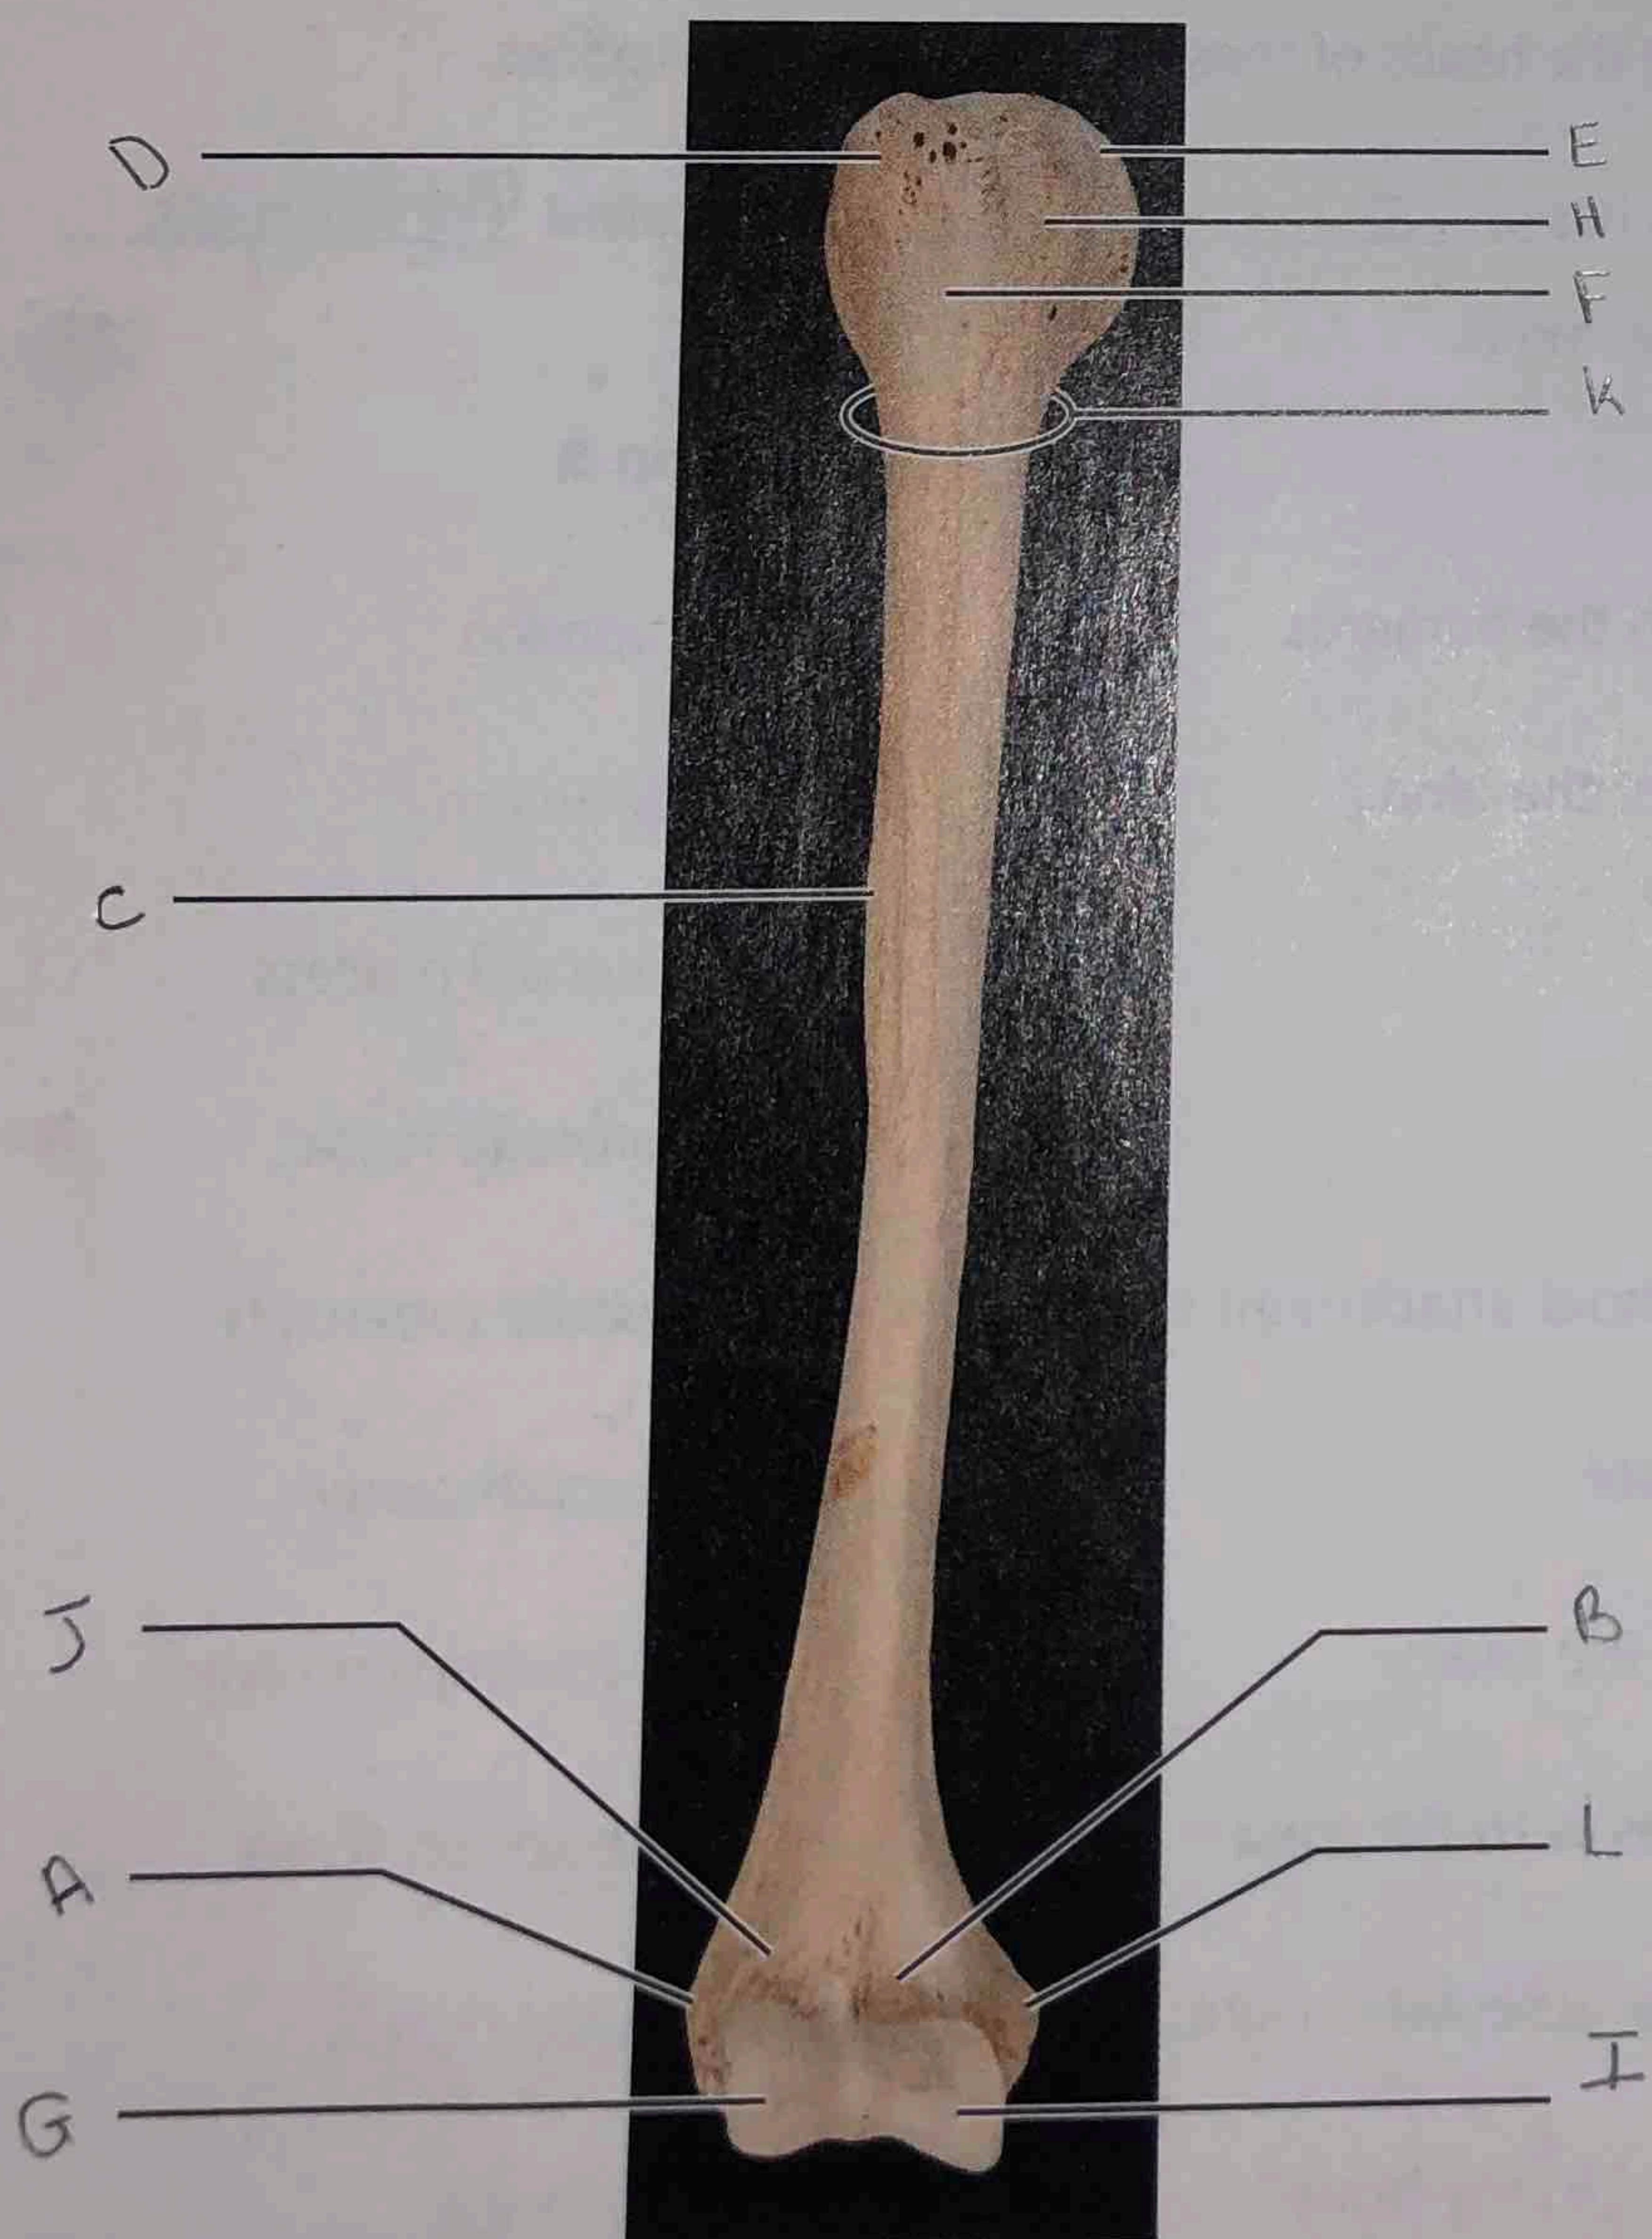

3. Using items from the list at the right, identify the anatomical landmarks and regions of the scapula.

Key:

- a. acromion
- b. coracoid process
- c. glenoid cavity
- d. inferior angle
- e. infraspinous fossa
- f. lateral border
- g. medial border
- h. spine
- i. superior angle
- j. superior border
- k. supraspinous fossa

4. Match the terms in the key with the appropriate leader lines on the photograph of the humerus.

Key:

- a. capitulum
- b. coronoid fossa
- c. deltoid tuberosity
- d. greater tubercle
- e. head
- f. intertubercular sulcus
- g. lateral epicondyle
- h. lesser tubercle
- i. medial epicondyle
- j. radial fossa
- k. surgical neck
- l. trochlea

12. Match the bone names and markings in column B with the descriptions in column A. The items in column B may be used more than once.

Column AISKRHATCDGMXQWNLBVOPEFUWJYK, and

1. fuse to form the hip bone

2. rough projection that supports body weight when sitting

3. point where the hip bones join anteriorly

4. superiormost margin of the hip bone

5. deep socket in the hip bone that receives the head
of the thigh bone

6. joint between axial skeleton and pelvic girdle

7. longest, strongest bone in body

8. thin, lateral leg bone

9. permits passage of the sciatic nerve

10. notch located inferior to the ischial spine

11. point where the patellar ligament attaches

12. kneecap

13. shinbone

14. medial ankle projection

15. lateral ankle projection

16. largest tarsal bone

17. ankle bones

18. bones forming the instep of the foot

19. opening in hip bone formed by the pubic and ischial rami

and F 20. sites of muscle attachment on
the proximal femur

21. tarsal bone that "sits" on the calcaneus

22. weight-bearing bone of the leg

23. tarsal bone that articulates with the tibia

Column B

a. acetabulum

b. calcaneus

c. femur

d. fibula

e. gluteal tuberosity

f. greater and lesser
trochanters

g. greater sciatic notch

h. iliac crest

i. ilium

j. ischial tuberosity

k. ischium

l. lateral malleolus

m. lesser sciatic notch

n. medial malleolus

o. metatarsals

p. obturator foramen

q. patella

r. pubic symphysis

s. pubis

t. sacroiliac joint

u. talus

v. tarsals

w. tibia

x. tibial tuberosity

7. Name the two bone markings that form the proximal radioulnar joint.

Ulnar radial notch & Annular Ligament

8. Name the two bone markings that form the distal radioulnar joint.

Ulnar notch & Radius

Bones of the Pelvic Girdle and Lower Limb

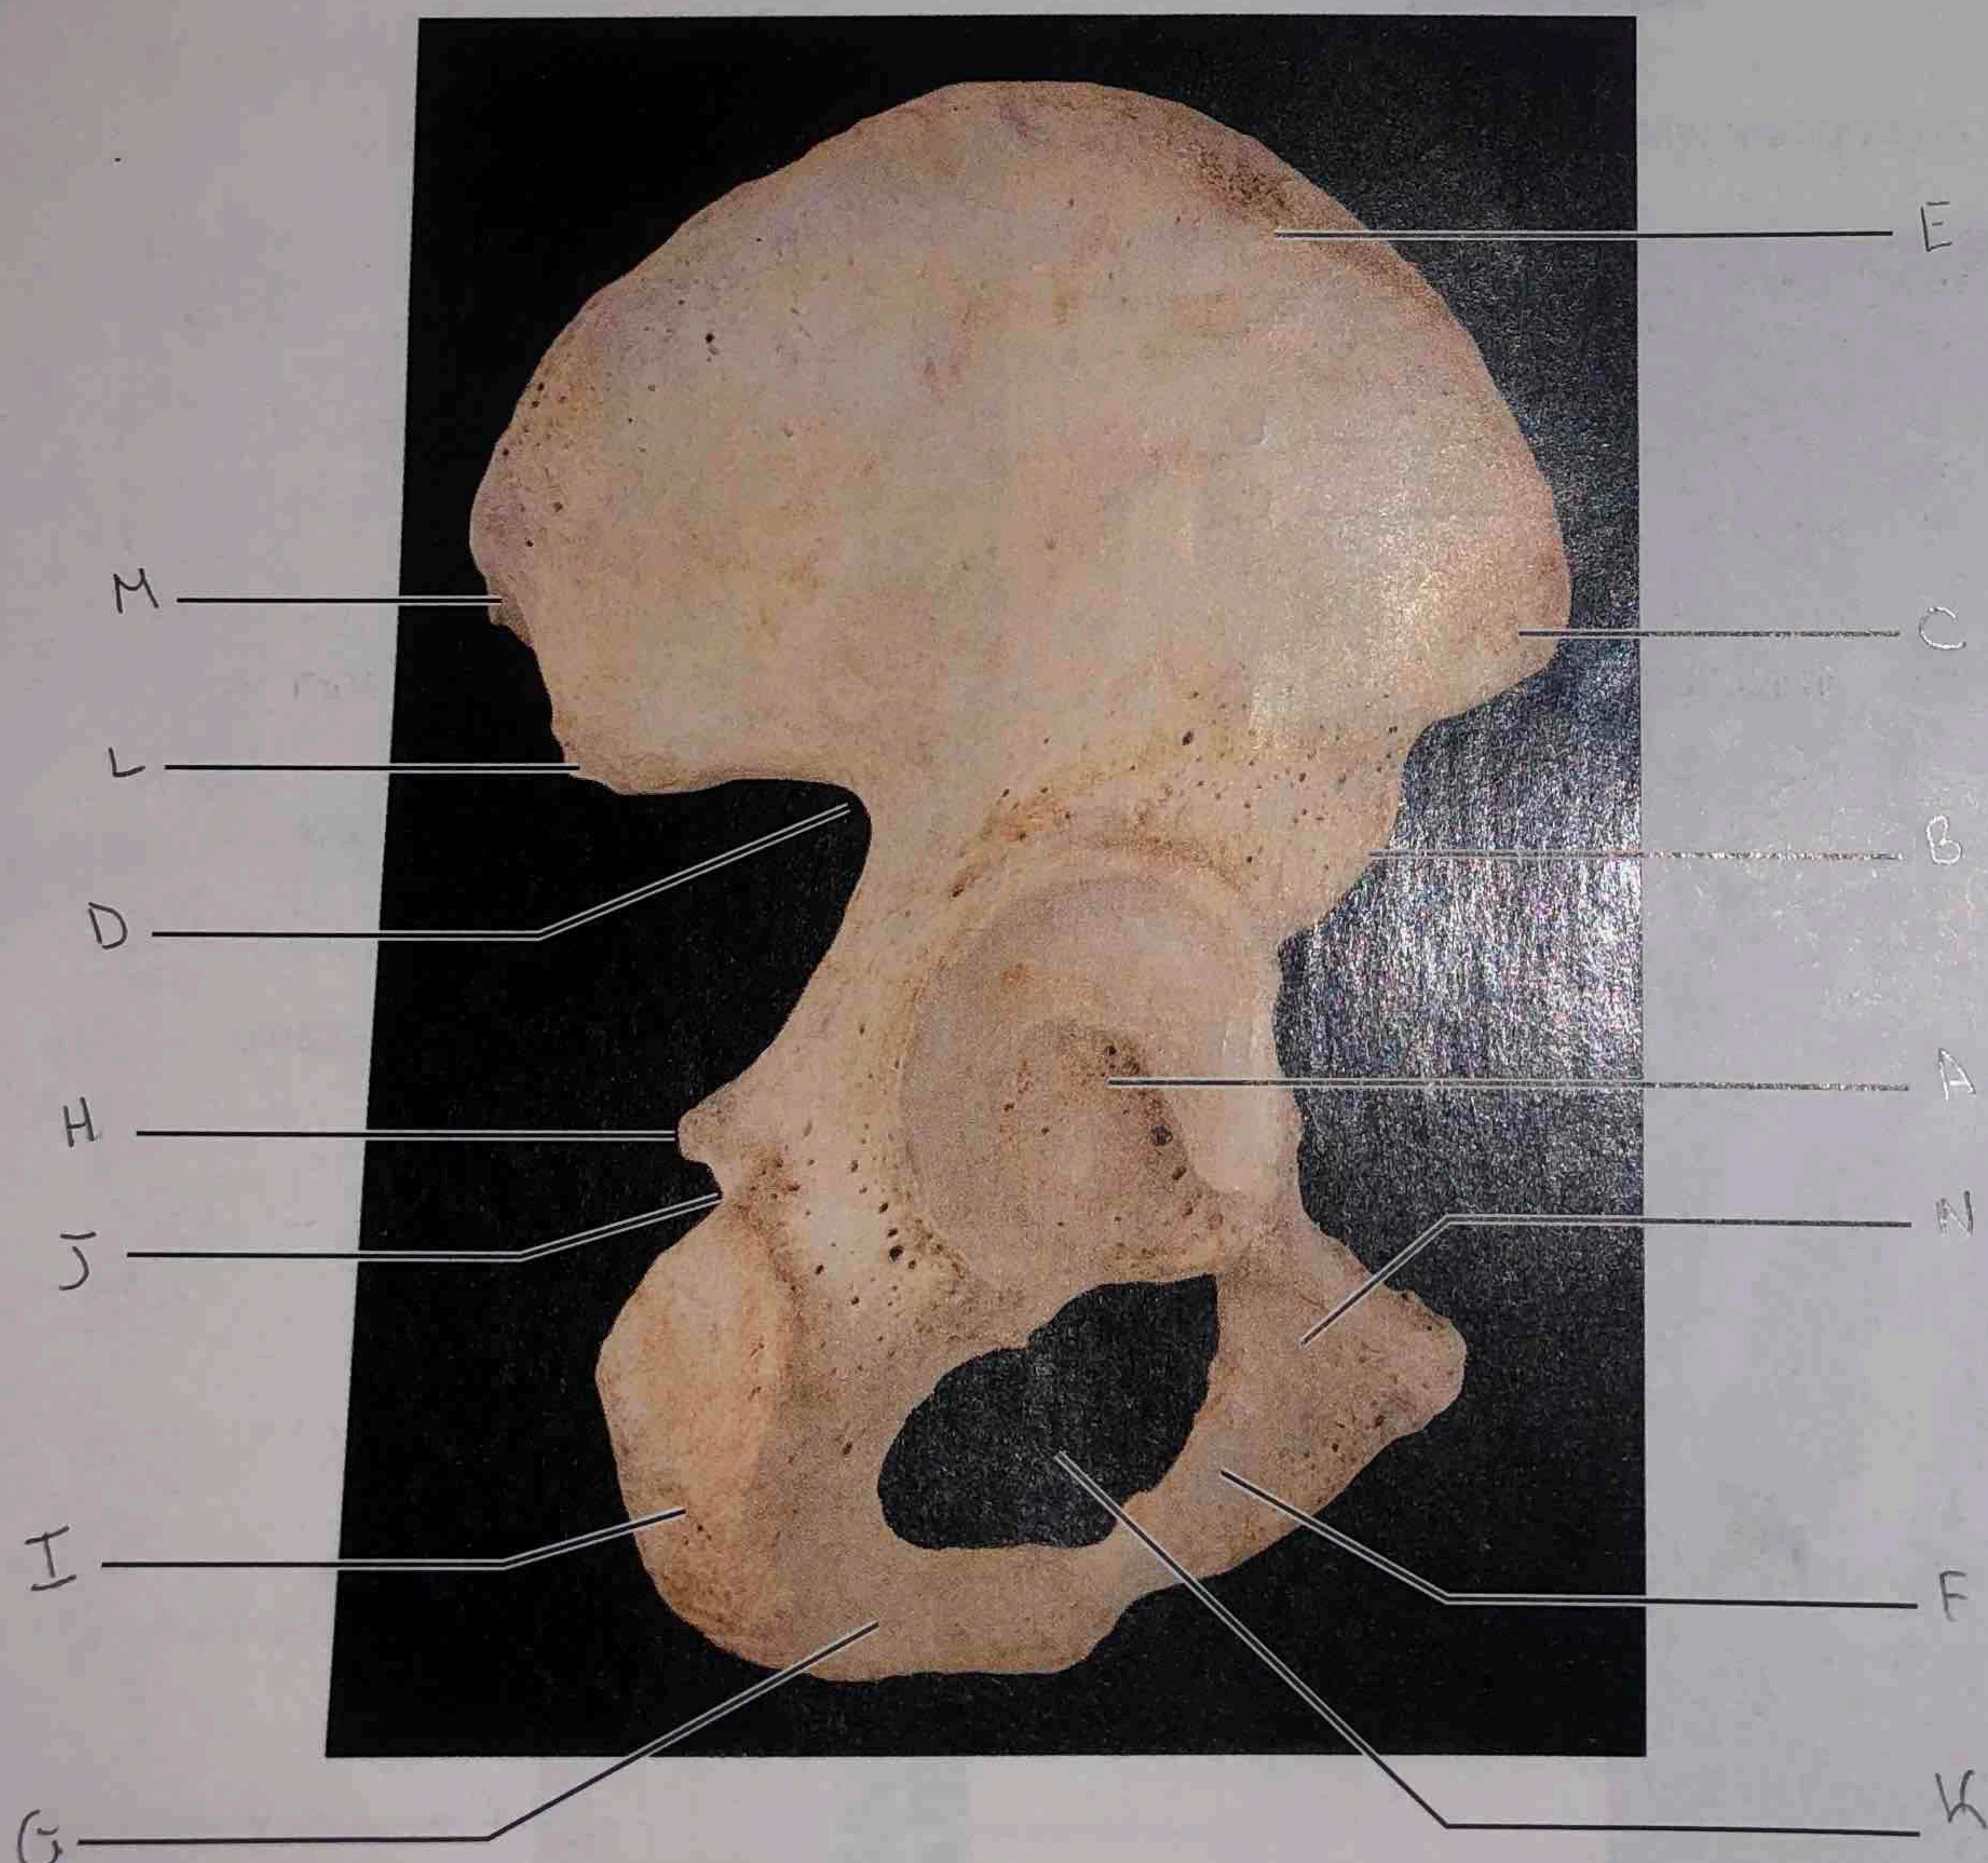

9. Compare the pectoral and pelvic girdles by choosing appropriate descriptive terms from the key.

- Key:
- a. flexibility most important
 - b. massive
 - c. lightweight
 - d. insecure axial and limb attachments
 - e. secure axial and limb attachments
 - f. weight-bearing most important

Pectoral: B, E, F Pelvic: A, D, C

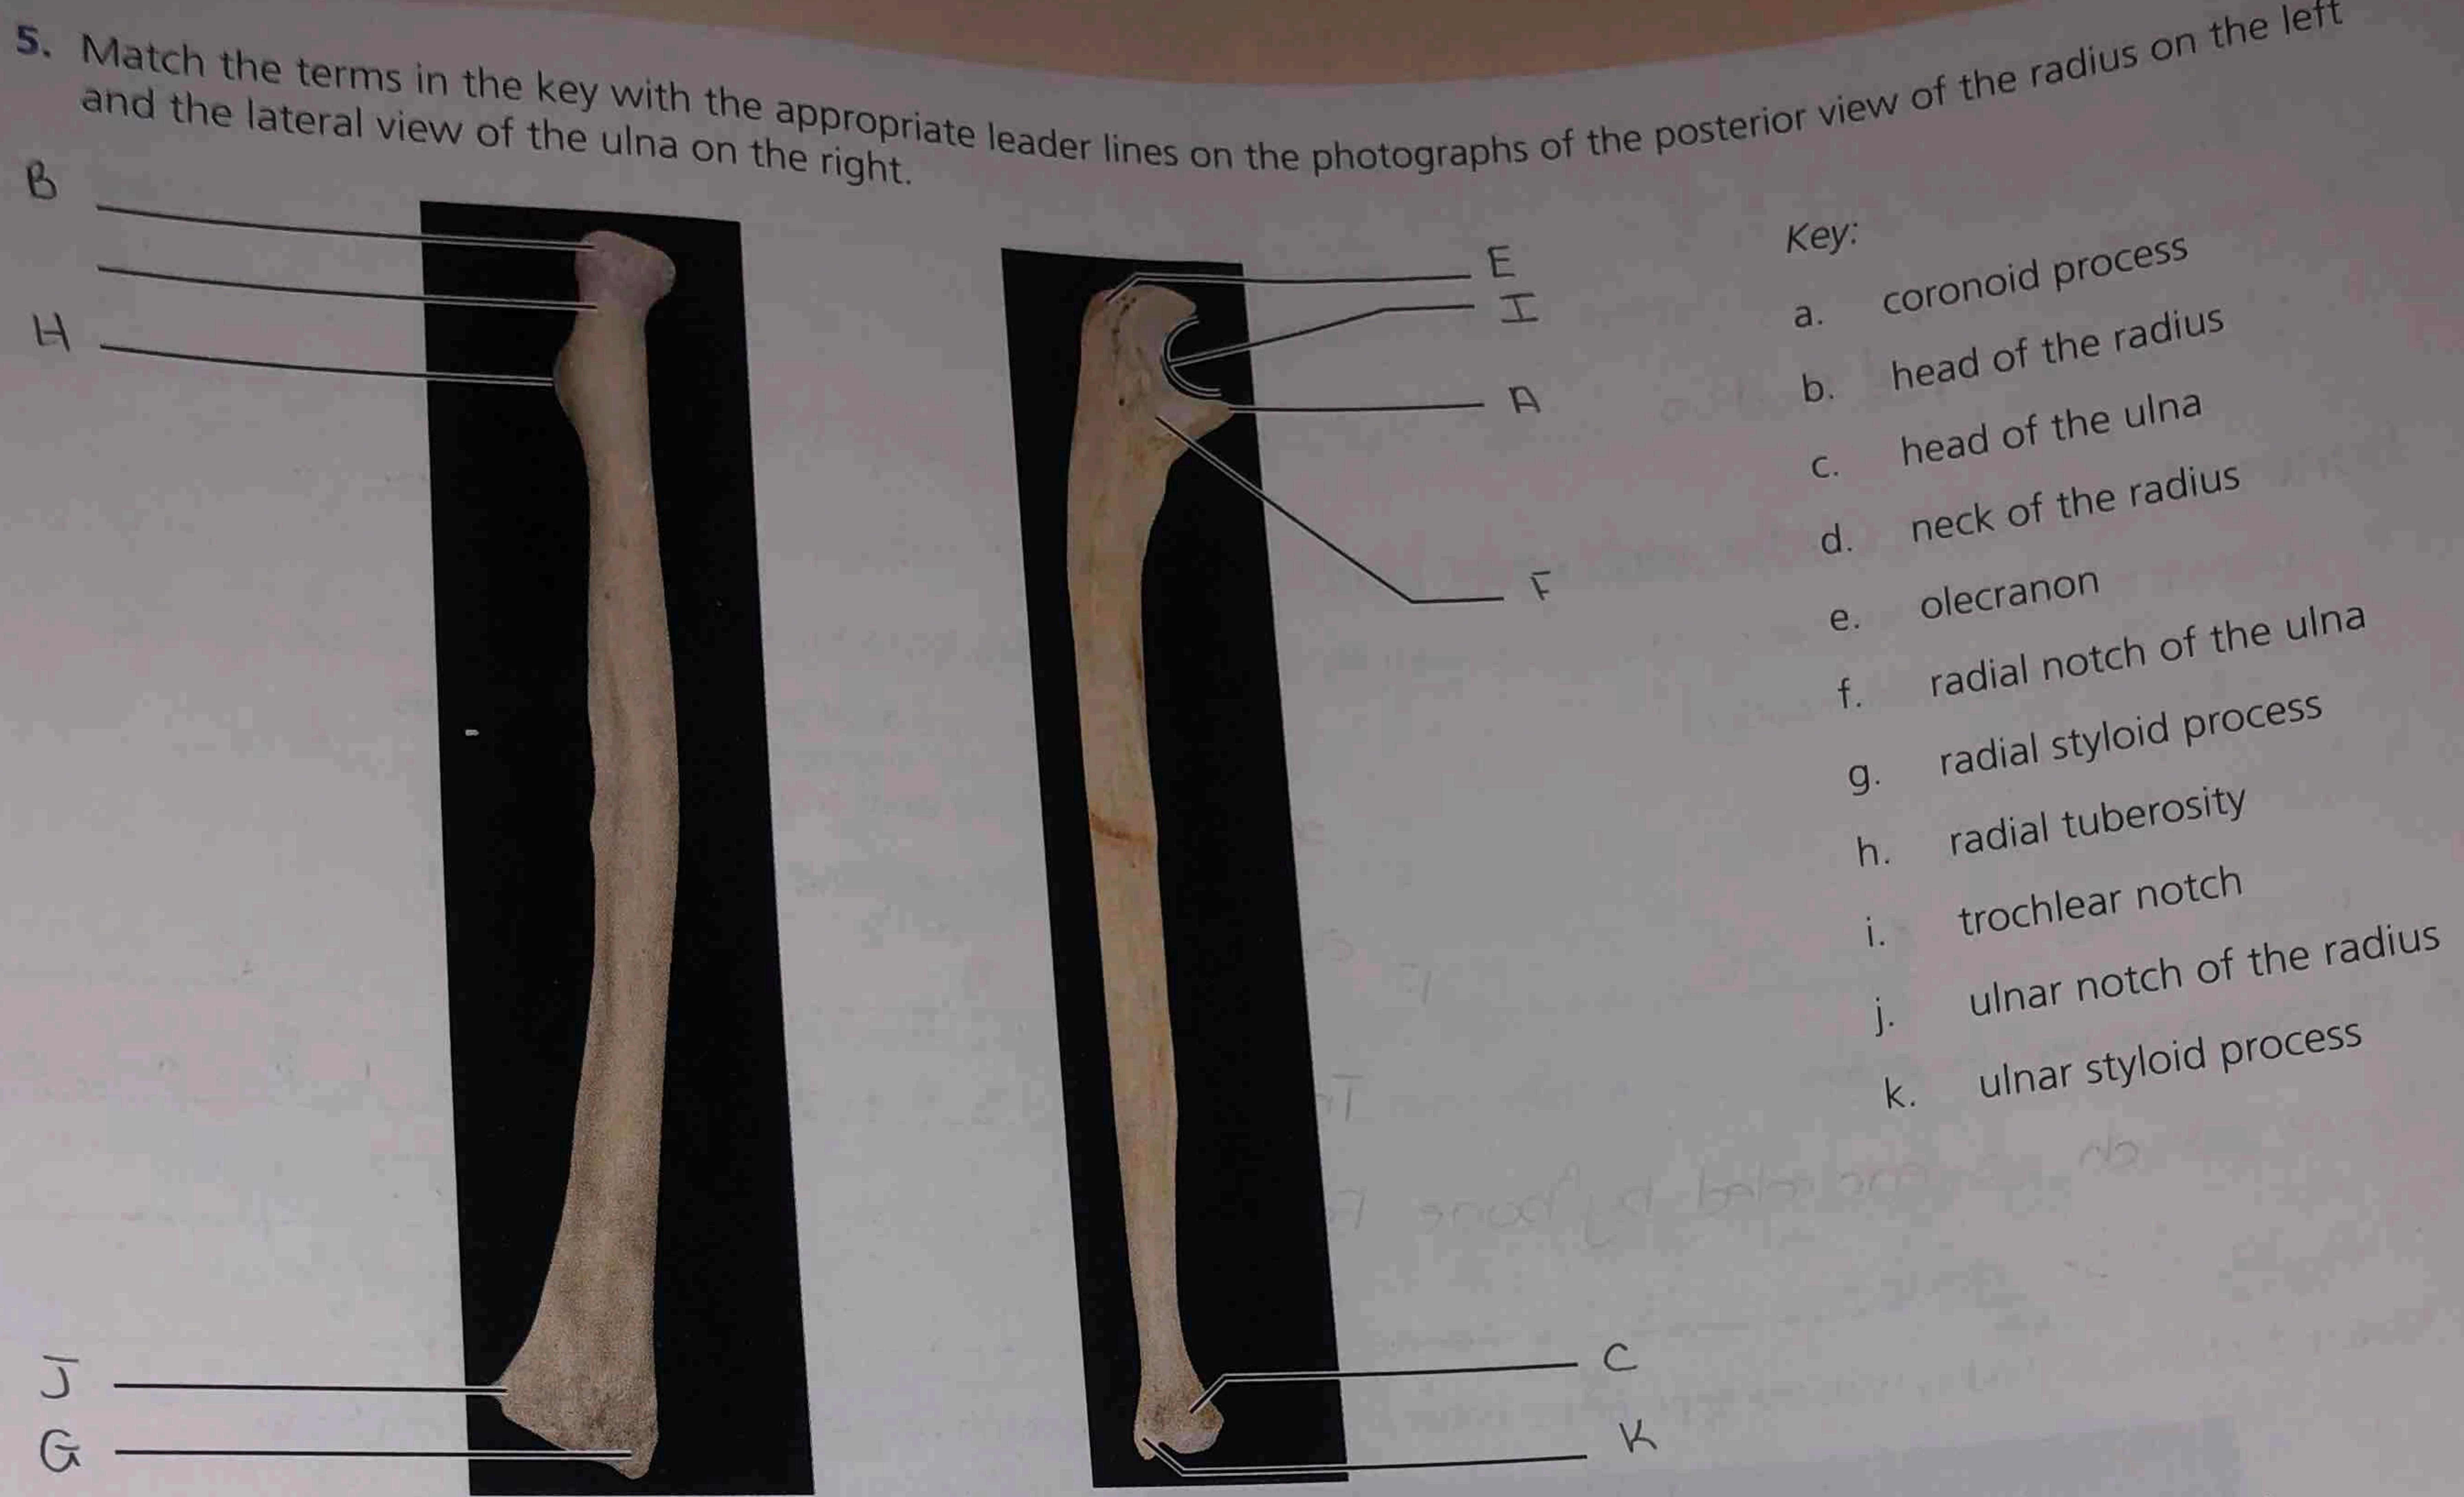

10. Distinguish between the true pelvis and the false pelvis. True Pelvis is the region inferior to the pelvic brim which is encircled by bone. False Pelvis is the area medial to the flaring iliac bones.

11. Match the terms in the key with the appropriate leader lines on the photograph of the lateral view of the hip bone.

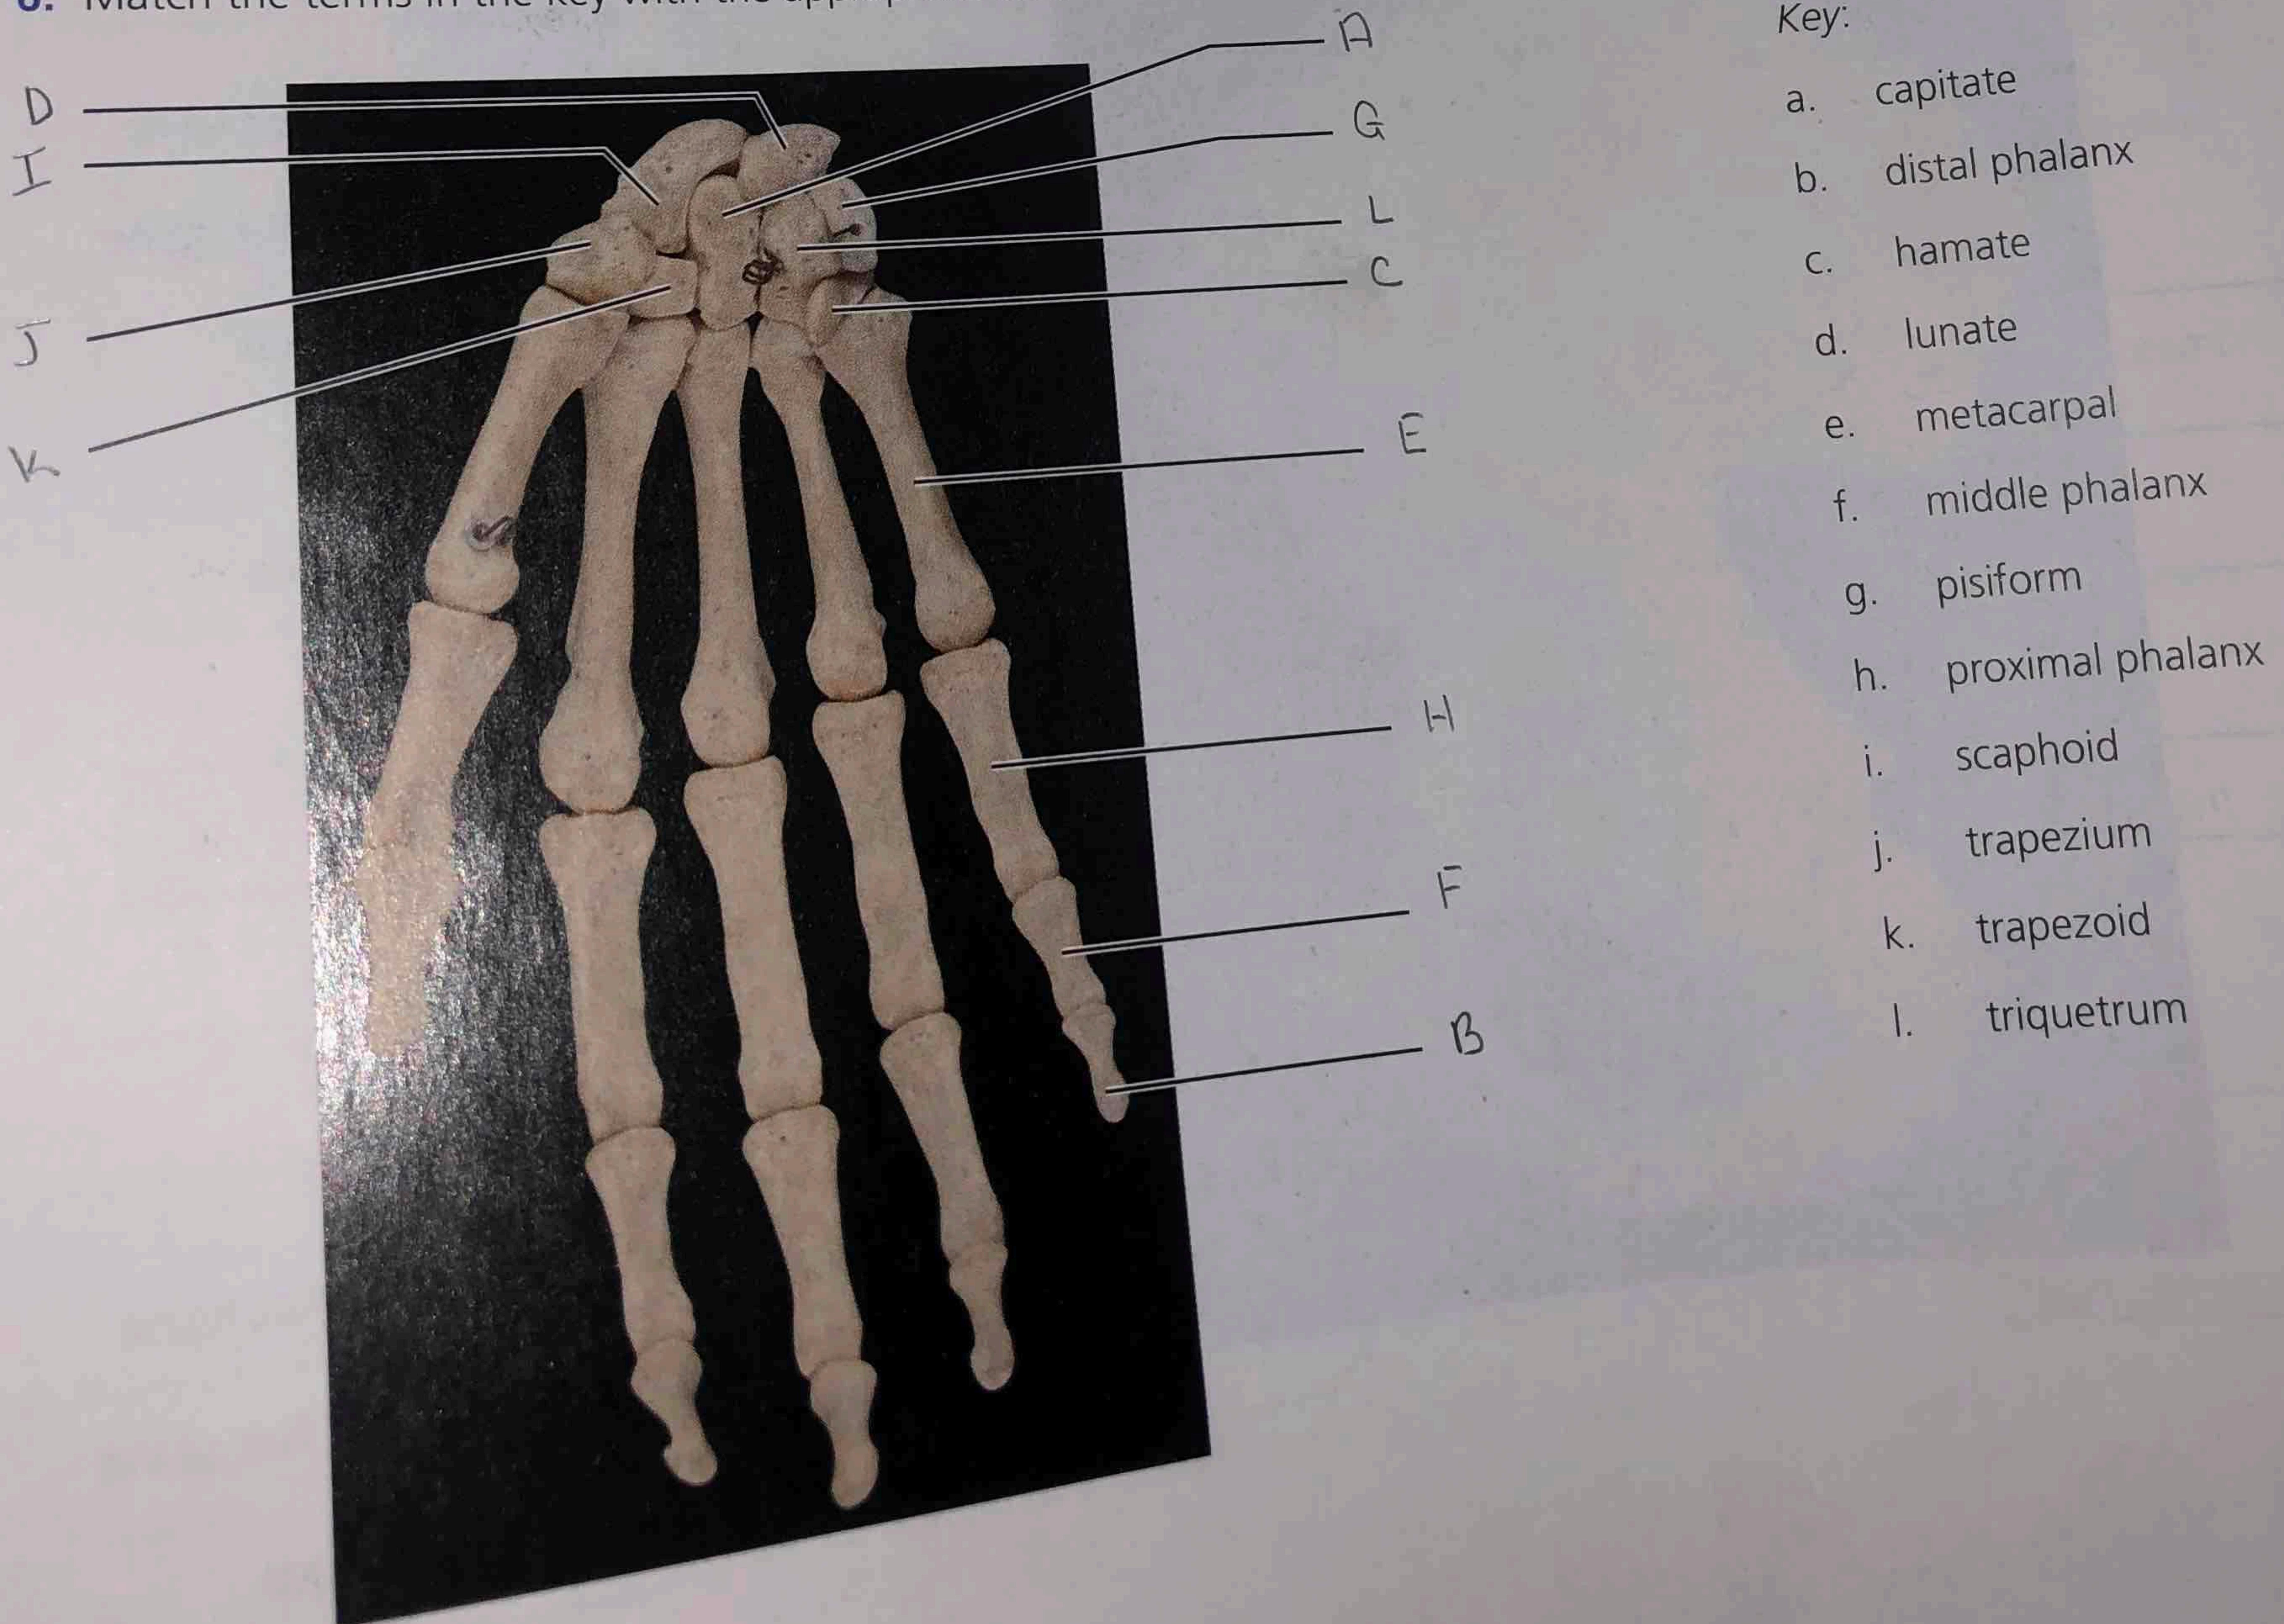

Key:

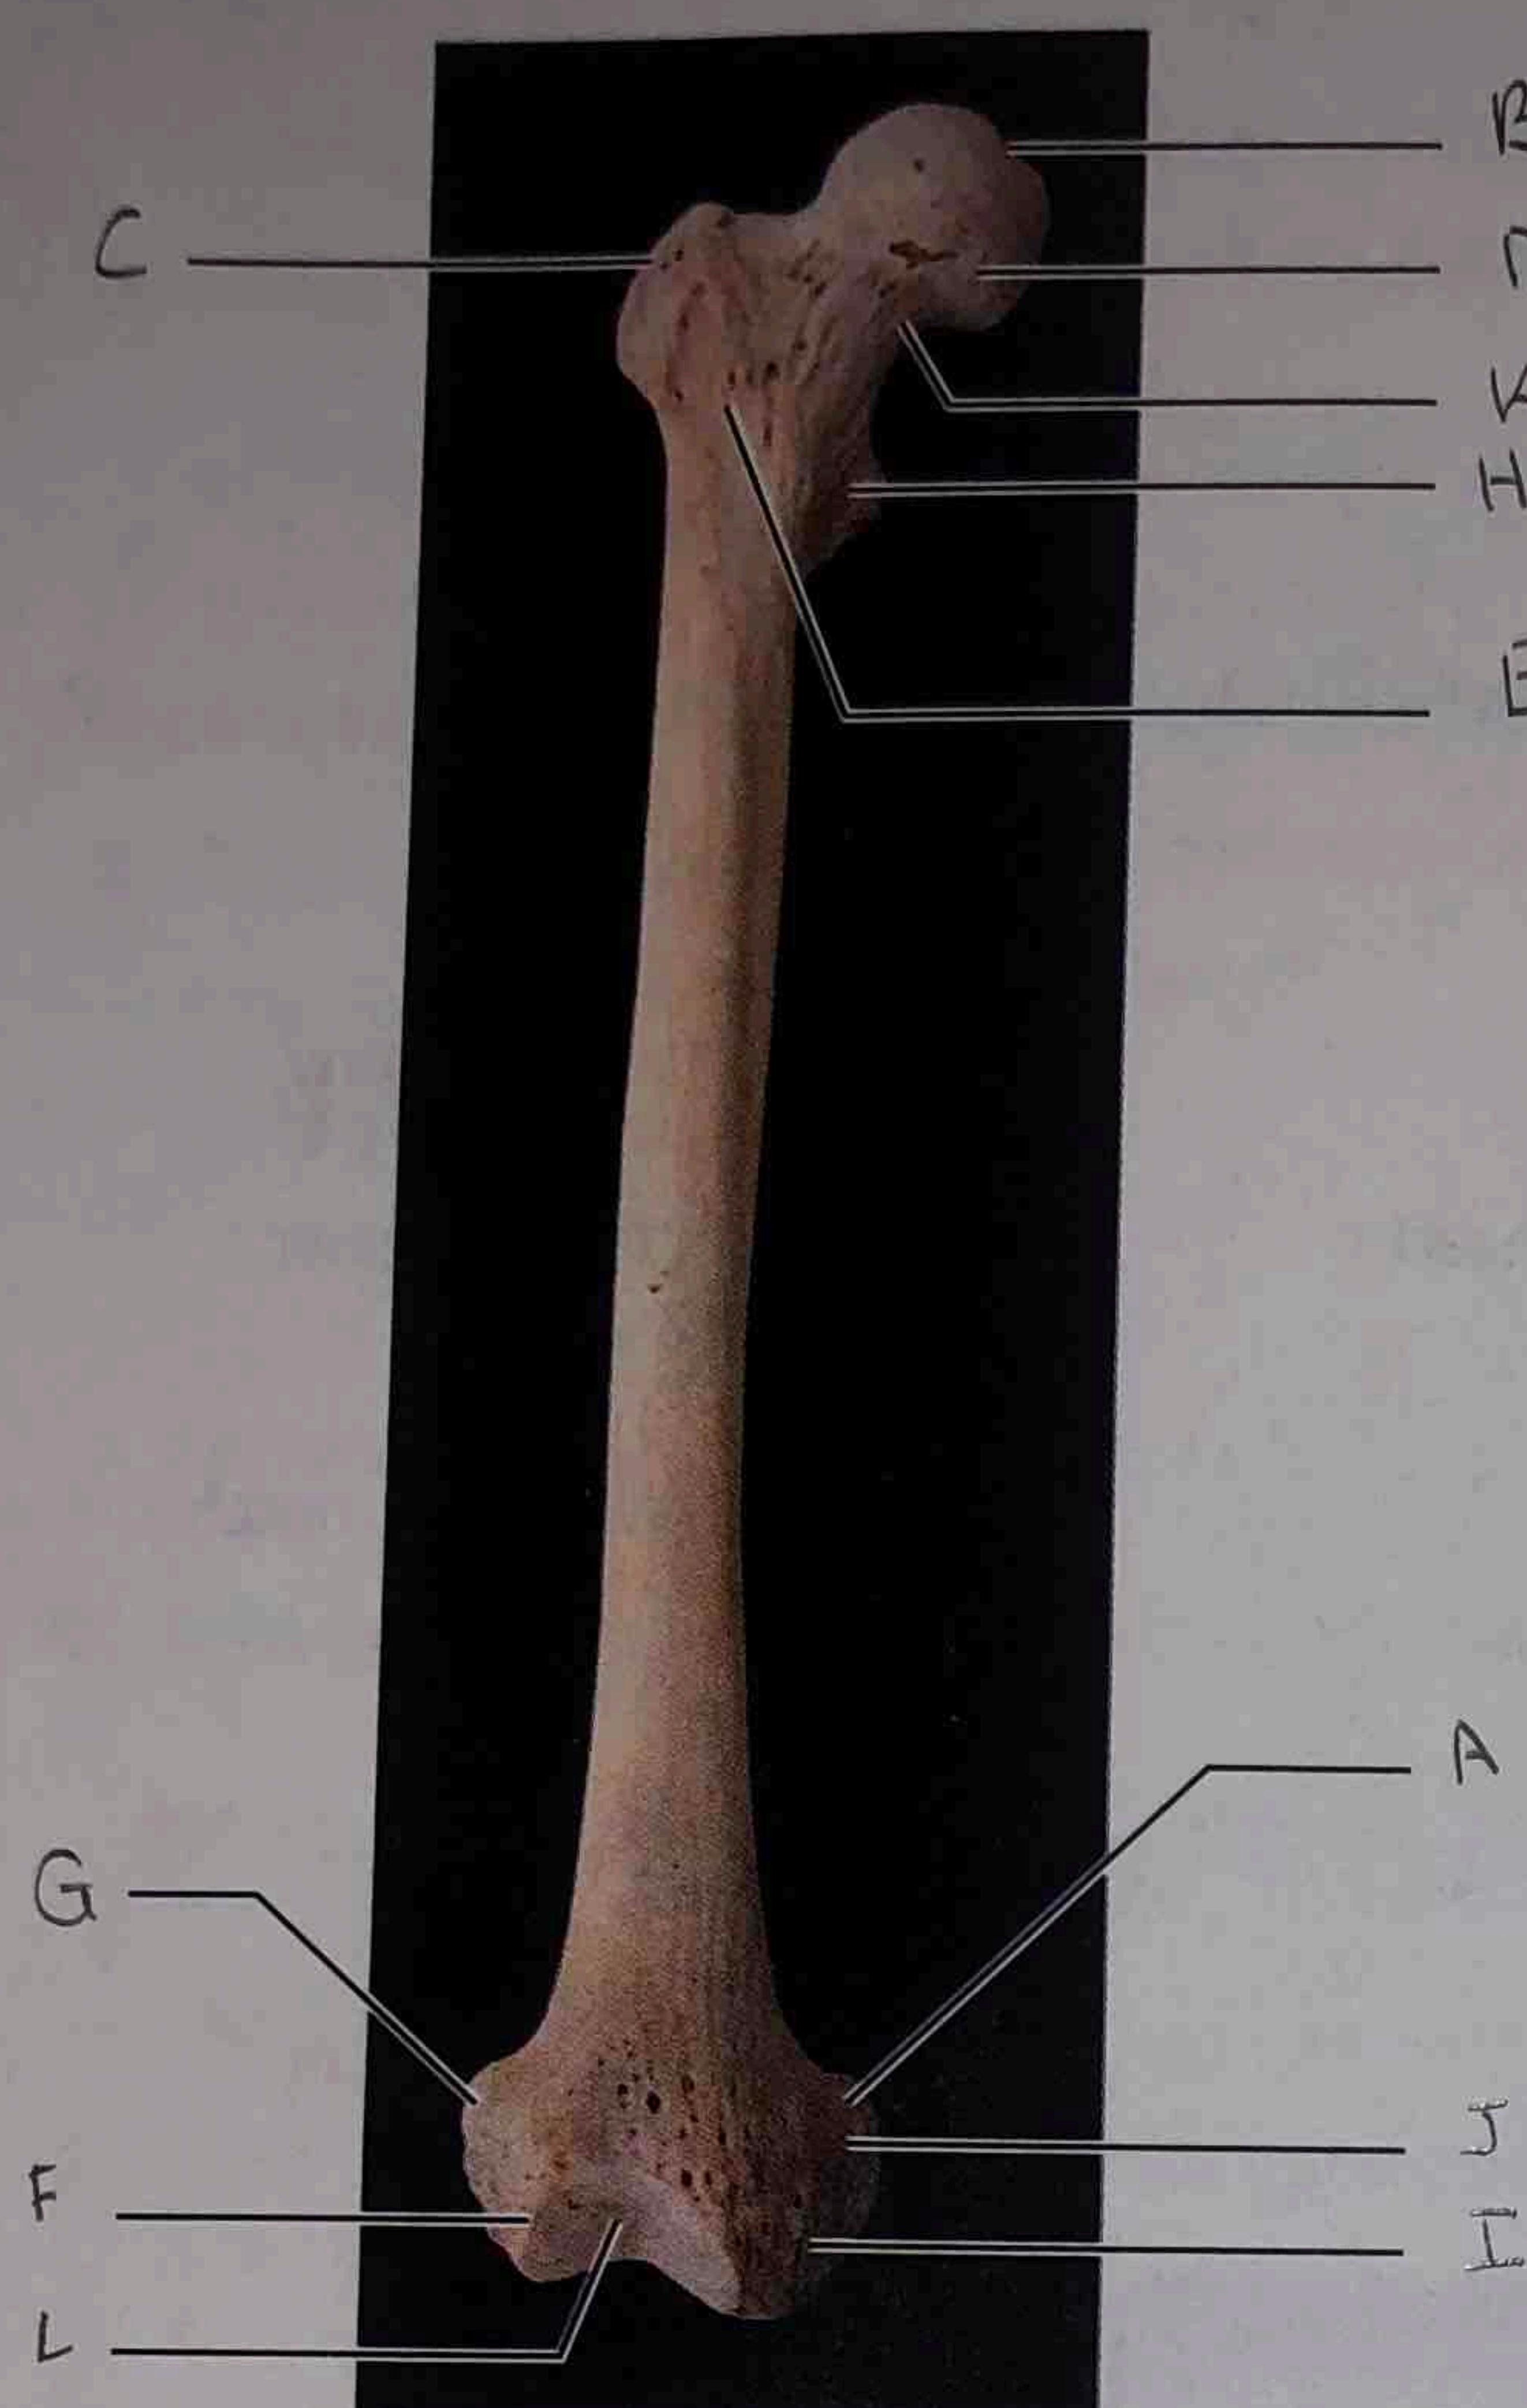

- a. acetabulum
- b. anterior inferior iliac spine
- c. anterior superior iliac spine
- d. greater sciatic notch
- e. iliac crest
- f. inferior pubic ramus
- g. ischial ramus
- h. ischial spine
- i. ischial tuberosity
- j. lesser sciatic notch
- k. obturator foramen
- l. posterior inferior iliac spine
- m. posterior superior iliac spine
- n. superior pubic ramus

6. Match the terms in the key with the appropriate leader lines on the photograph of the anterior view of the hand.

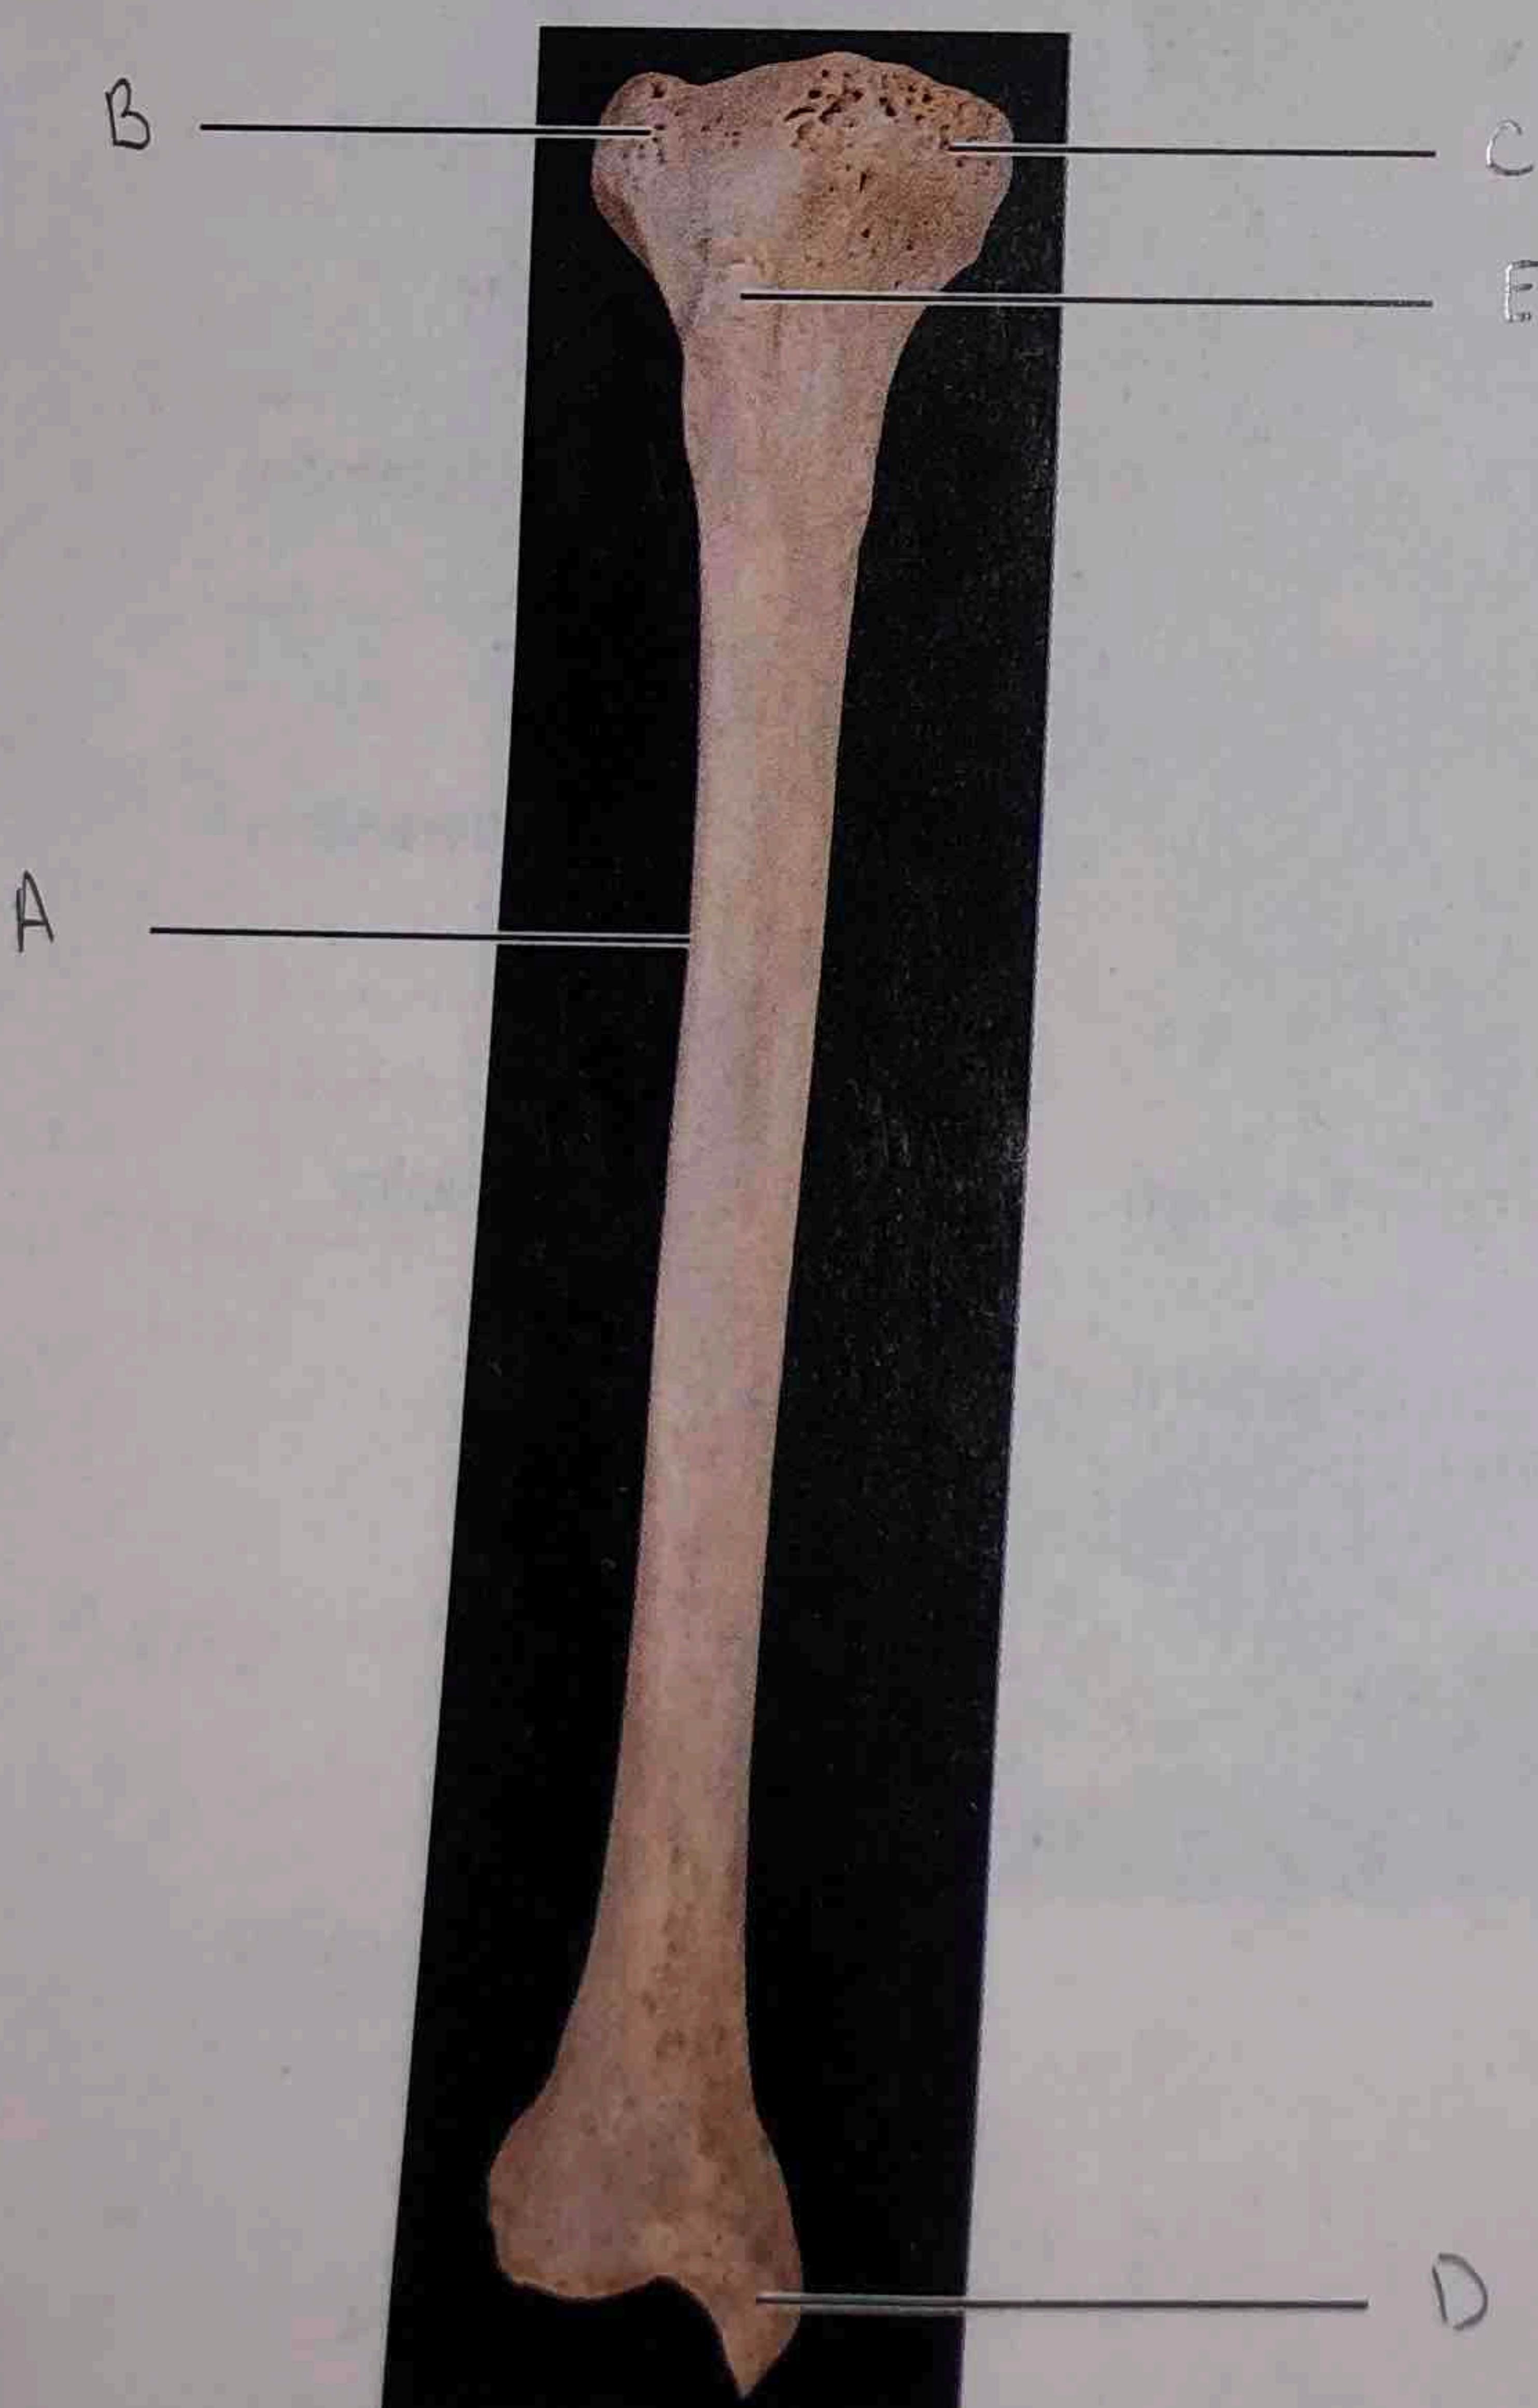

13. Match the terms in the key with the appropriate leader lines on the photograph of the anterior view of the femur.

Key:

- a. adductor tubercle
- b. fovea capitis
- c. greater trochanter
- d. head
- e. intertrochanteric line
- f. lateral condyle
- g. lateral epicondyle
- h. lesser trochanter
- i. medial condyle
- j. medial epicondyle
- k. neck
- l. patellar surface

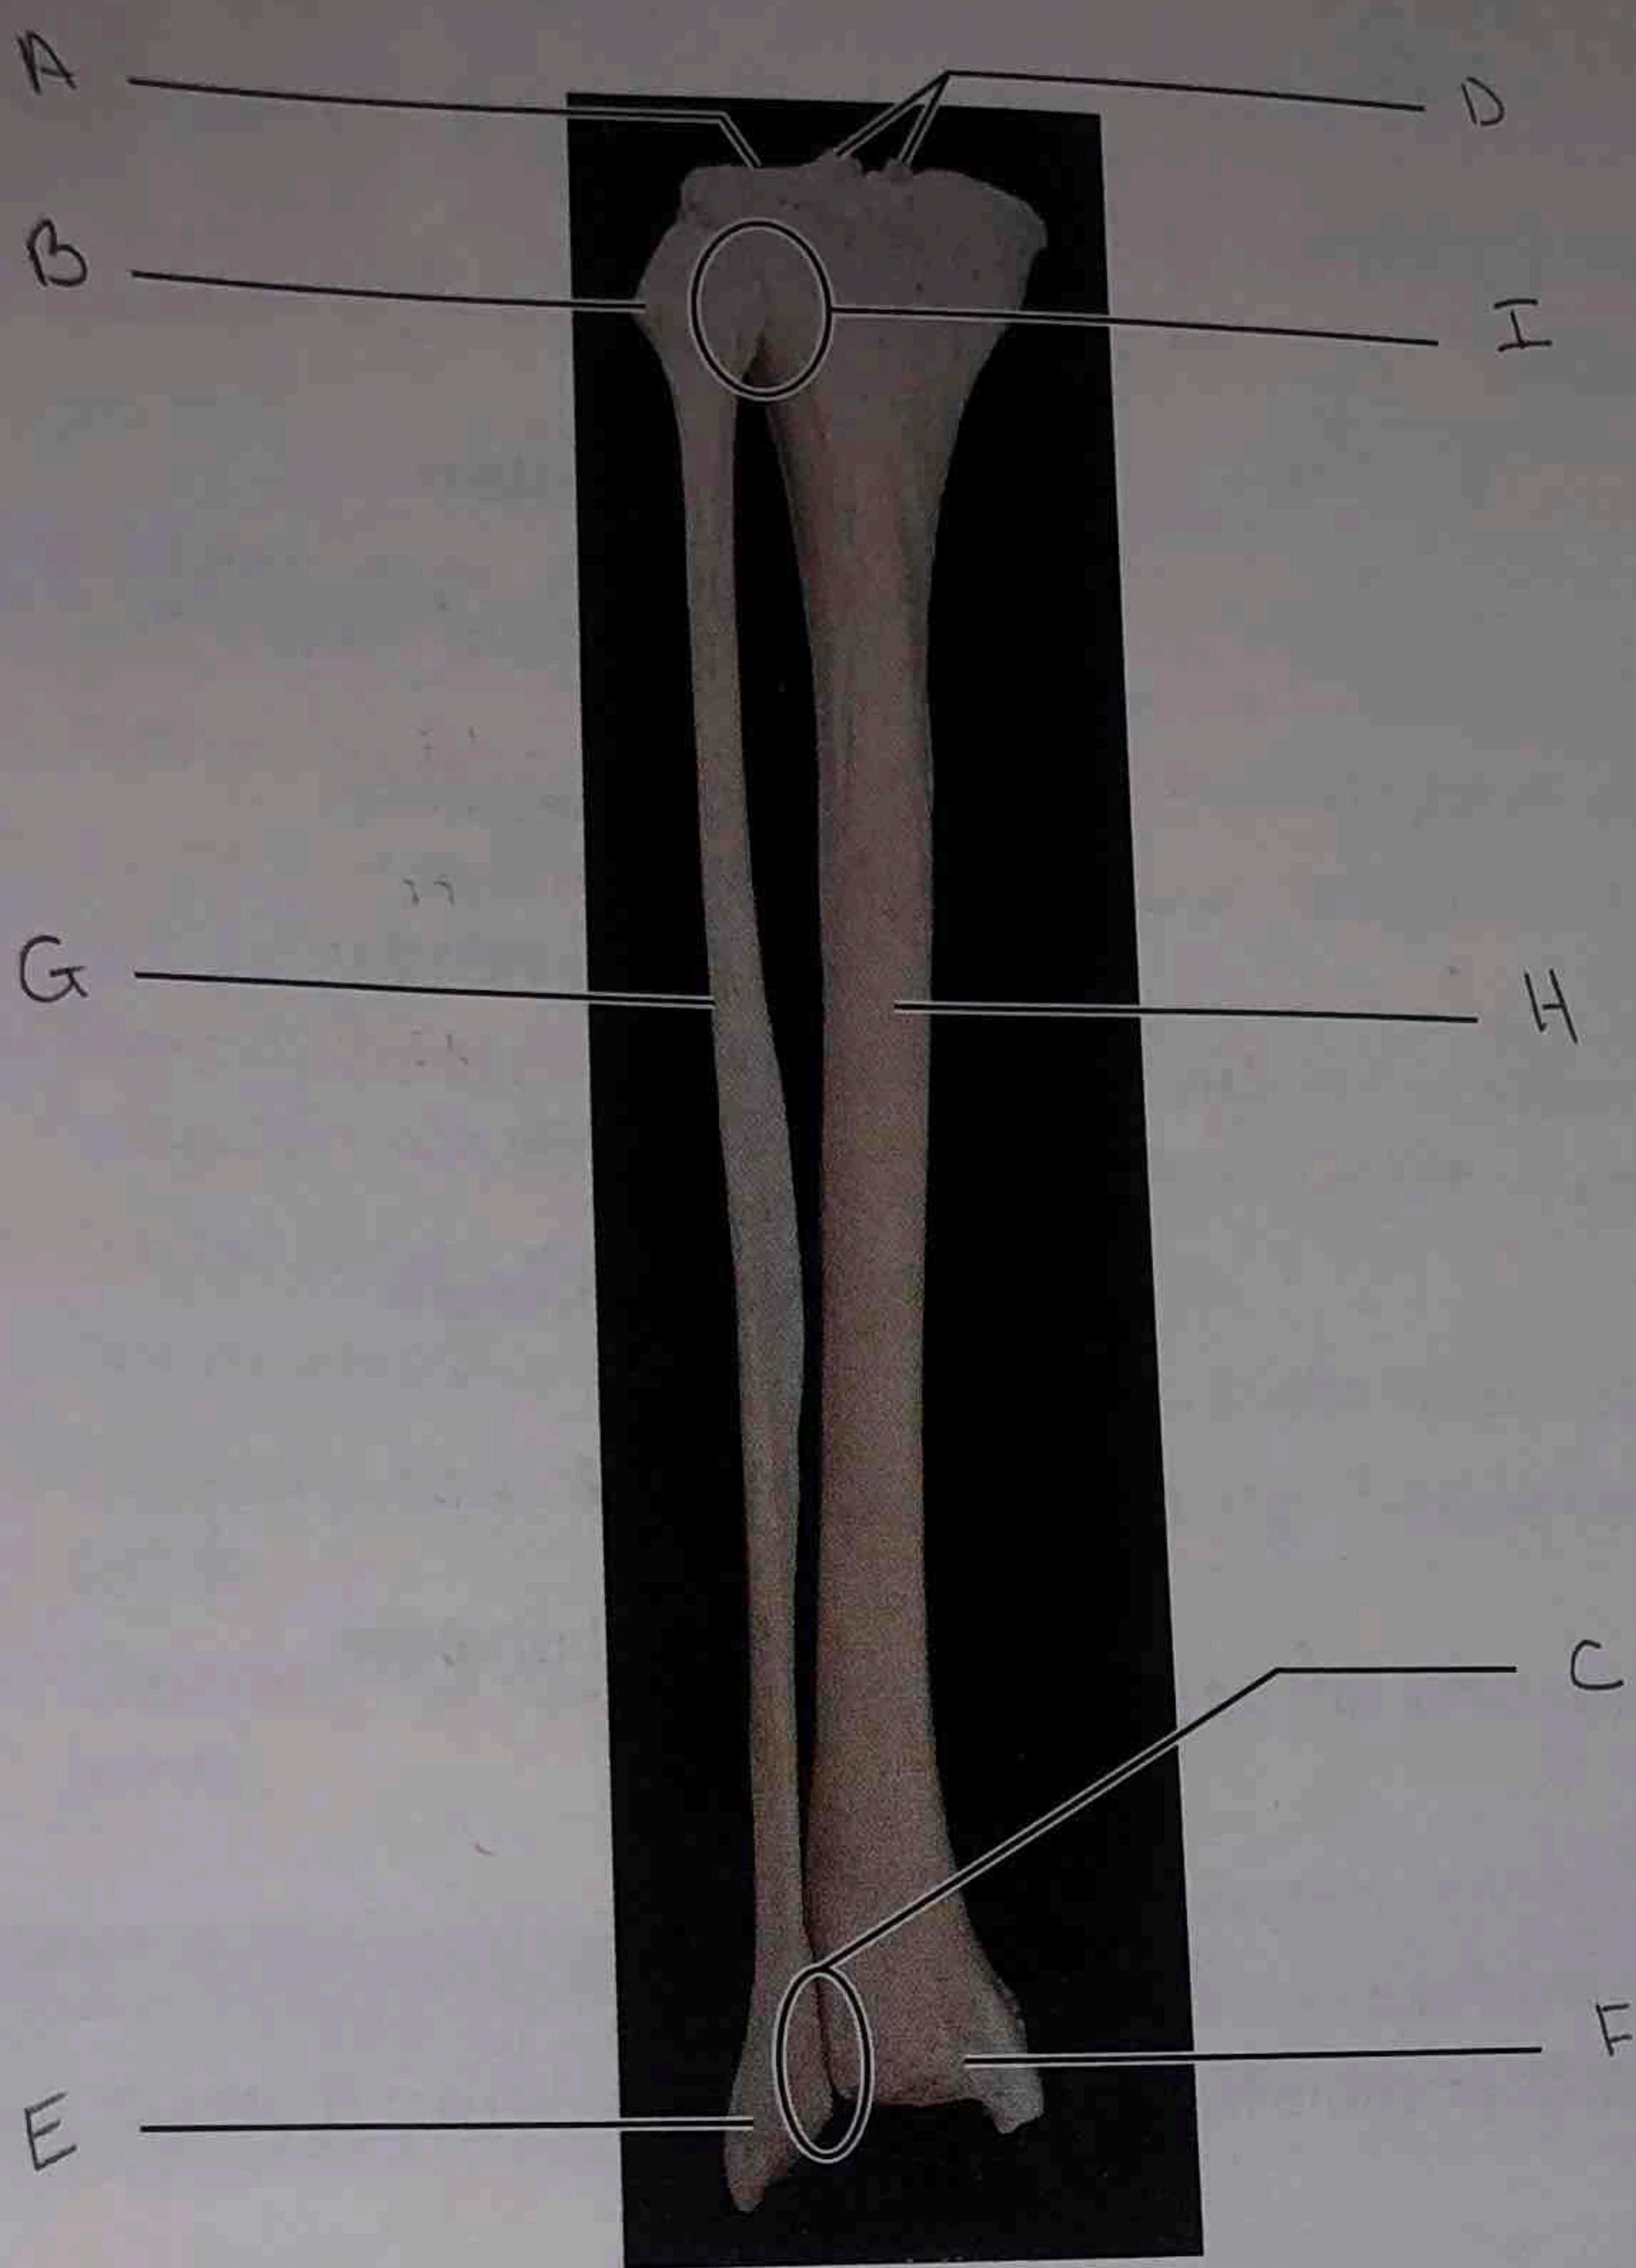

14. Match the terms in the key with the appropriate leader lines on the photograph of the anterior view of the tibia.

Key:

- a. anterior border
- b. lateral condyle
- c. medial condyle
- d. medial malleolus
- e. tibial tuberosity

15. Match the terms in the key with the appropriate leader lines on the photograph of the posterior view of the articulated tibia and fibula.

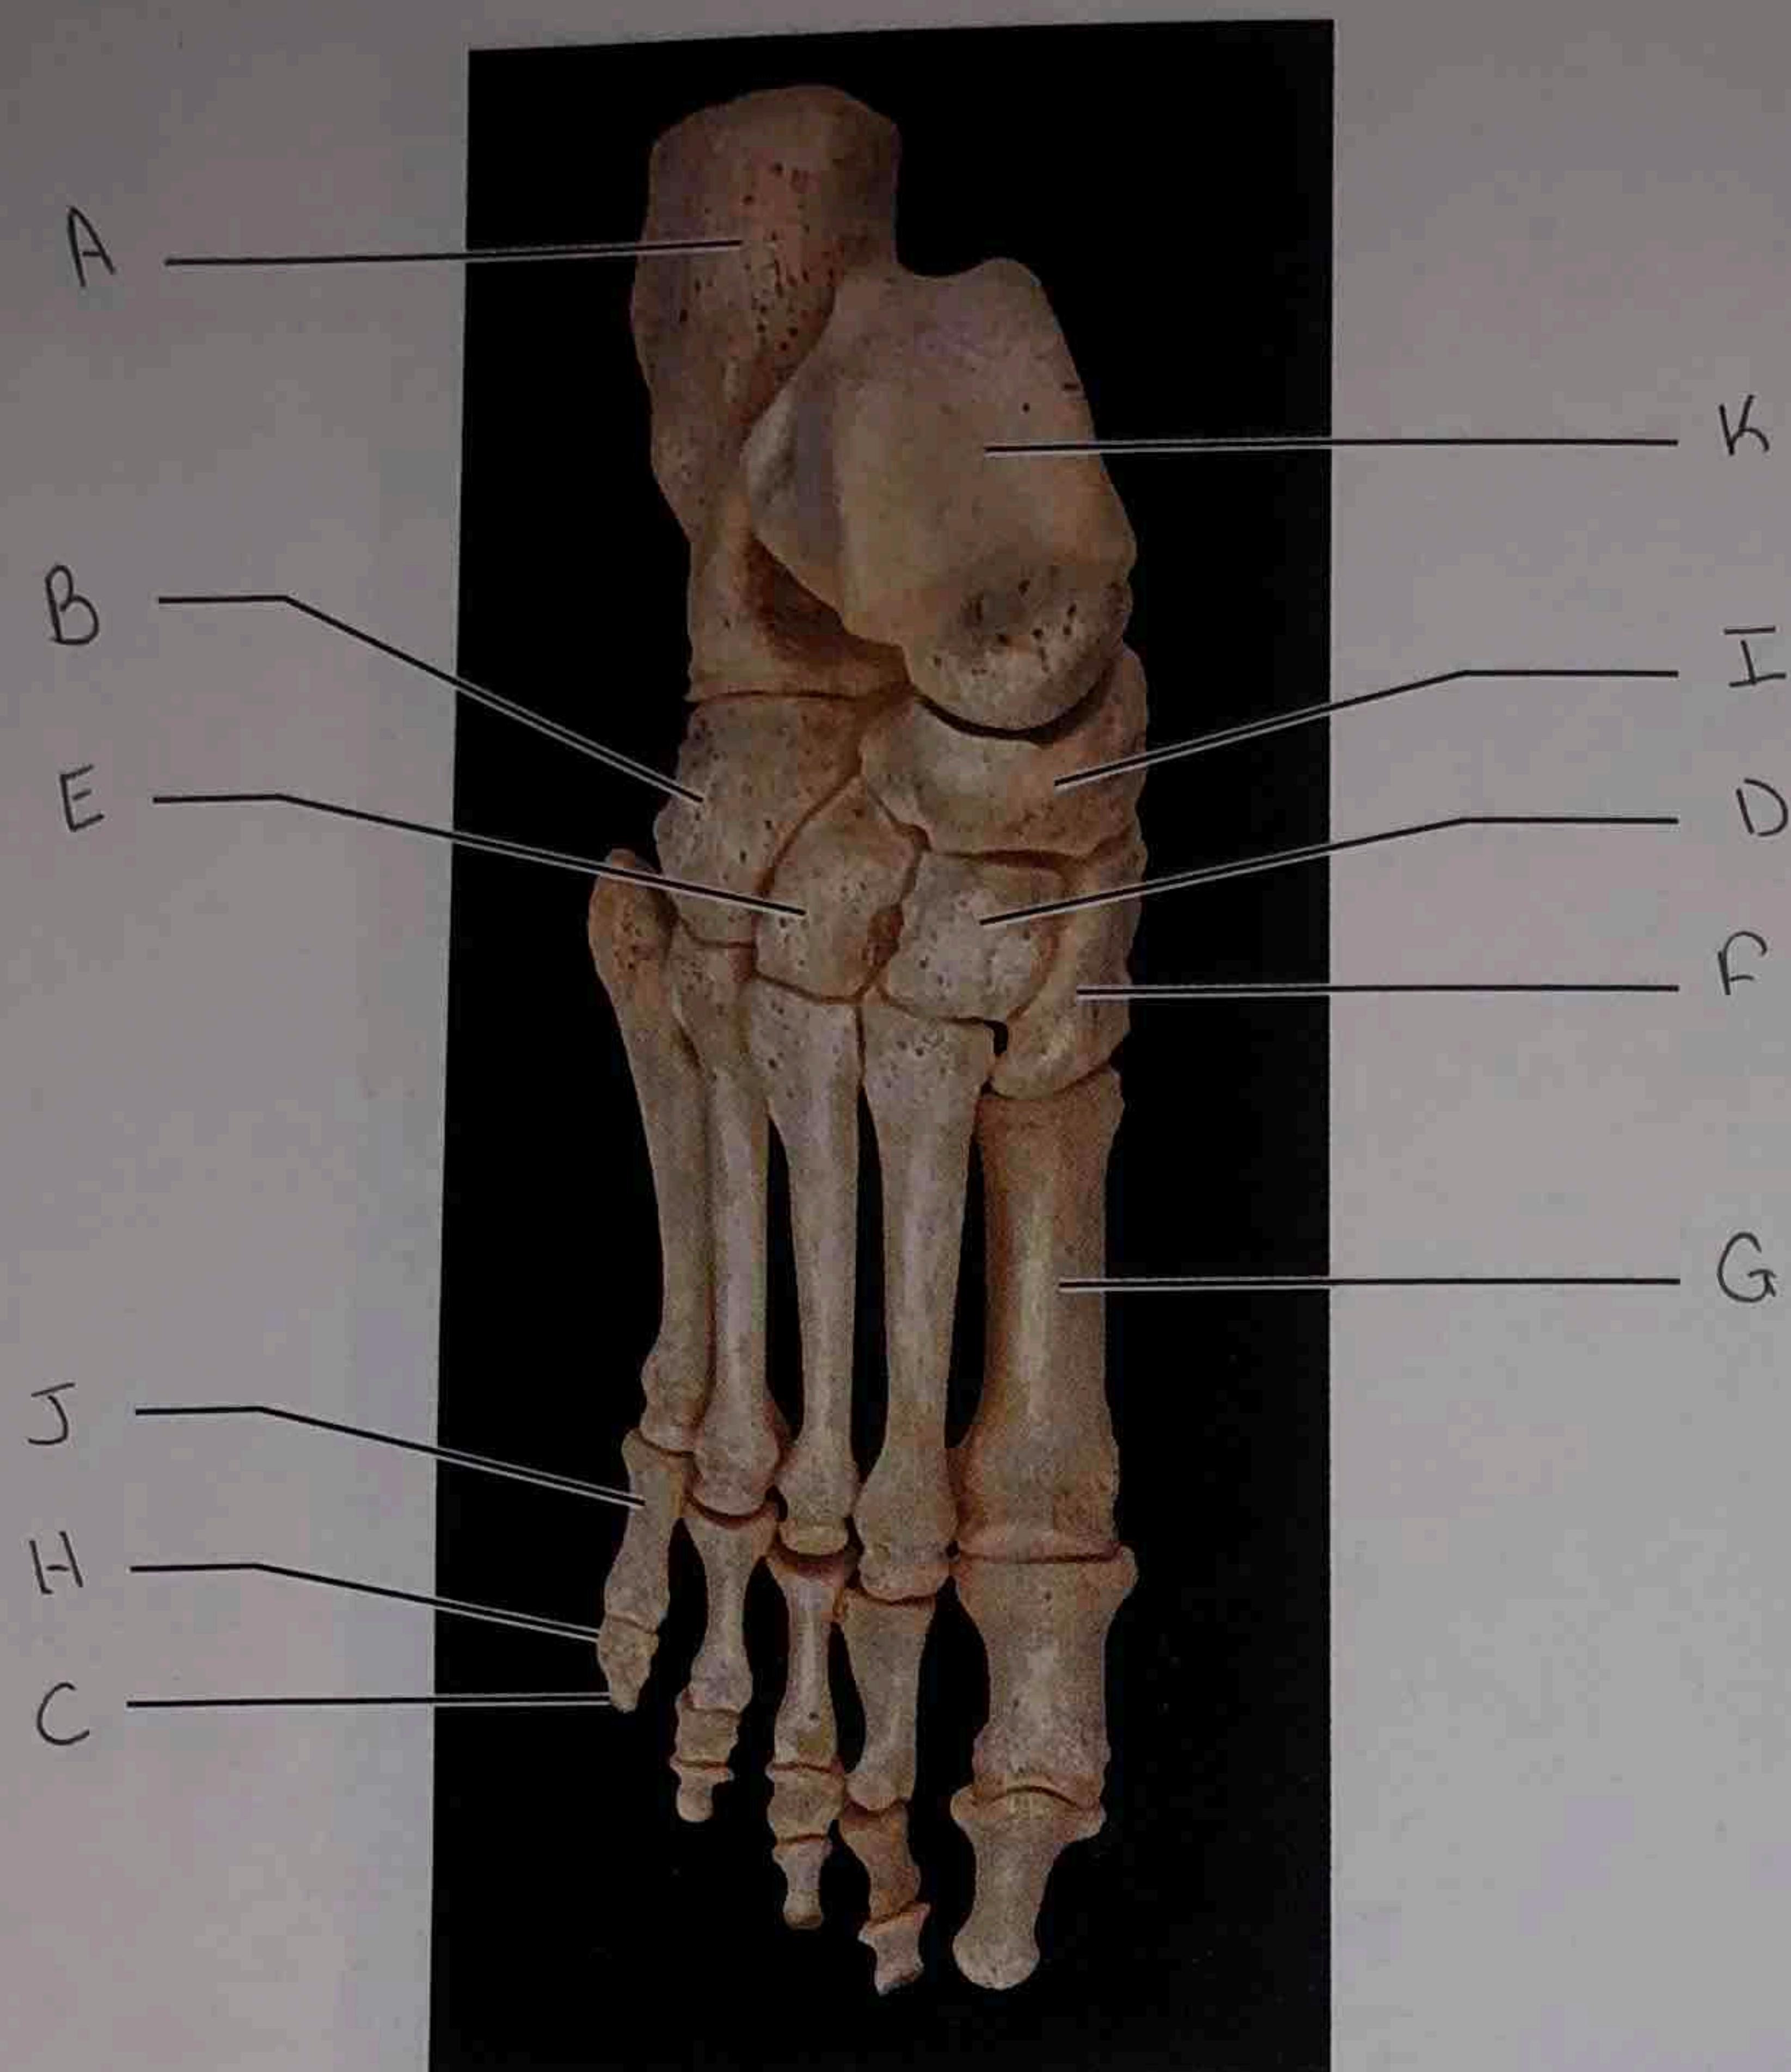

Key:

- a. articular surface of the lateral condyle
- b. head of the fibula
- c. inferior tibiofibular joint
- d. intercondylar eminence
- e. lateral malleolus
- f. medial malleolus
- g. shaft of the fibula
- h. shaft of the tibia
- i. superior tibiofibular joint

16. Are the bones of the leg shown above from the left or from the right leg? right leg

Explain how you can tell which side of the body they are from. Posterior image fibula is lateral bone and facing outside of leg

17. Match the terms in the key with the appropriate leader lines on the photograph of the superior view of the articulated foot.

Key:

- a. calcaneus
- b. cuboid
- c. distal phalanx
- d. intermediate cuneiform
- e. lateral cuneiform
- f. medial cuneiform
- g. metatarsal
- h. middle phalanx
- i. navicular
- j. proximal phalanx
- k. talus

18. **+** FOOSH is an acronym that stands for Fall on Outstretched Hand. Discuss possible fractures and dislocations that might occur with an injury of this type.
-
-

19. **+** Describe some of the features of the female pelvis that provide for compatibility with vaginal birth. Cavity of

the pelvis has greater capacity to allow passage of a child through the
pelvic.

20. **+** Your X-ray exam reveals that you have fractured your fibula. Your physician remarks, "Well, it's better than breaking your tibia." Explain why a fracture of the tibia would be worse than a fracture of the fibula. The fibula provides lateral support
and stability for the tibia
-
